Contents

Preface

Introduction

1: The Organism and its Environment	15
1.1 The organism and its abiotic environment: limits to tolerance	15
1.2 Interactions between environmental variables	17
1.3 Macro-environment and micro-environment	22
1.4 Adjustment of tolerance limits	25
1.5 Homeostasis: avoidance of the problem	31
1.6 Behavioural mechanisms for homeostasis	33
1.7 Adaptive suites	36
1.8 Organism and abiota: a two-way interaction	42
2: The Ecological Community	43
2.1 Introduction	43
2.2 Communities and ecosystems	43
2.3 Biotic relationships	44
2.4 The organism in the community	48
2.5 The community level of organisation	49
2.6 Tropho-dynamic analyses	49
2.7 Community structure	51
2.8 Analyses of food web design	53
2.9 Subcompartments in community structure	54
2.10 Common denominators of community design	56
2.11 Species-abundance relationships	59
2.12 Species associations	65
2.13 Niche relationships and design rules	66
2.14 The structure of particular communities	66
2.15 Community flux	68
3: Community Dynamics	69
3.1 Introduction	69
3.2 The community as a system of energy transformations	69

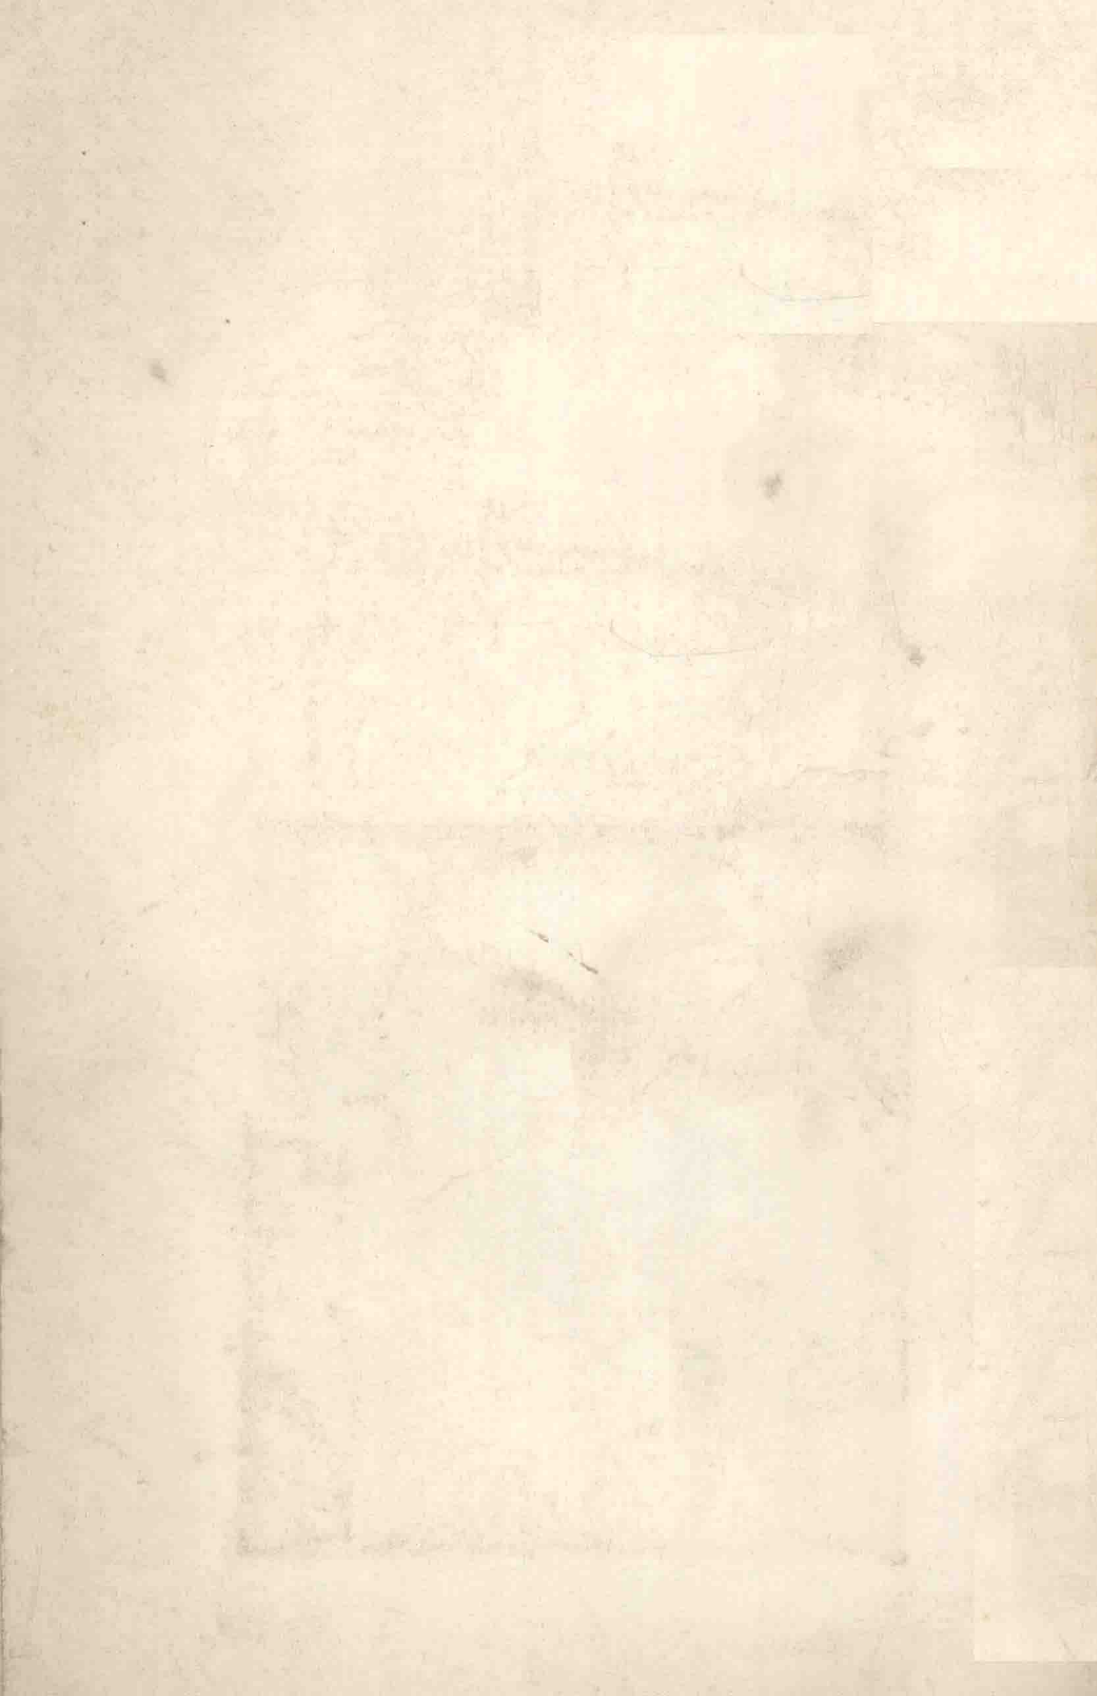

3.3	Energy relationships of individuals	71
3.4	Energy relationships in the community	73
3.5	Energy flow within the community: the trophodynamic approach	73
3.6	Limitations of energy analysis	79
3.7	The flow of nutrients within communities	80
3.8	The importance of the decomposers	84
4:	Temporal Change in Community Structure and Function	86
4.1	Introduction	86
4.2	Short-term cycles in community structure	86
4.3	Shifts in community structure: colonisation and extinction	87
4.4	Succession	89
4.5	Characteristics of succession	92
4.6	The mechanics of succession	95
4.7	What stops the successional process?	100
4.8	Climax communities	101
4.9	Succession as a necessary mathematical consequence	103
5:	The Concept of the Niche	105
5.1	Introduction and definition of niche	105
5.2	Parameters of the niche	106
5.3	Factors affecting the niche and its parameters	108
5.4	Niche separation	112
5.5	Niche overlap	114
5.6	Measures of niche width, separation and overlap	121
5.7	Niche relationships and community structure	123
5.8	Parallel niches	125
6:	Interspecific Competition and Community Structure	127
6.1	Introduction and definitions of competition	127
6.2	Interspecific competition	129
6.3	The mechanics of competition	129
6.4	Niche overlap and competition	133
6.5	The effects of interspecific competition within the community: exclusion and coexistence	134
6.6	Diffuse competition and indirect competitive effects	142
6.7	Competition as a selection pressure promoting change	142
6.8	Niche shifts and evolutionary change due to competition	144
6.9	Interspecific competition in natural systems	
7:	Population Structure and Analysis	152
7.1	What is population ecology?	152
7.2	Theoretical population growth	154
7.3	The analytic (life table) approach	161

7.4	Simulation of population events	183
7.5	Towards a general population theory	195
8:	Competition and Population Stability	202
8.1	Introduction: inter and intra-specific competition and population stability	202
8.2	Regulation in vertebrate populations	212
8.3	Population cycles in vertebrates	213
8.4	Population cycles in invertebrates	218
9:	Predators, Parasitoids and Population Stability	219
9.1	Why study predators and parasitoids?	219
9.2	Analytical models and the components of predation	222
9.3	Predator development and accumulation	239
9.4	A theoretical basis for biological control	245
9.5	Polyphagous predators and analytical models	249
9.6	Field studies of the role of polyphagous predators	251
9.7	The effects of predation on prey productivity and community structure	261
10:	Evolution and Adaptation	270
10.1	Evolution and ecology	270
10.2	Adaptation	270
10.3	Bionomic strategies	271
10.4	Implications of <i>r</i> - and <i>K</i> -selection	275
10.5	Adaptiveness of foraging strategy	280
10.6	Optimal foraging	285
10.7	Reproductive strategy	290
10.8	Adaptiveness of social group	292
10.9	Optimality and evolutionarily stable strategies	297
10.10	The evolution of stable strategies	299
11:	Coevolution	303
11.1	Insect-plant interactions	304
11.2	Larger herbivores	308
11.3	Interaction of plant-herbivore populations	310
11.4	Coevolution to mutualism	315
11.5	Coadapted systems	318
12:	Species Diversity	320
12.1	Diversity as a descriptor of ecological communities	320
12.2	Measures of diversity	321
12.3	Resolution of chaos in diversity indices	324
12.4	The S component of diversity: why are there so many kinds of organisms?	325

12.5	Colonisation, extinction and island biogeography	327
12.6	Saturation point	329
12.7	Equitability	331
12.8	Factors promoting species diversity	332
12.9	Theories of diversity	336
13	Stability	338
13.1	Definitions	338
13.2	Stability of single species populations	340
13.3	Stability of two or three species systems	340
13.4	Community stability	343
13.5	Diversity and stability	347
13.6	May's Paradox	349
13.7	Stability and food web design	352
13.8	The energetics of stable systems	353
13.9	Causes for stability	355
	References	356
	Index	380
	Acknowledgements	386
