WEST'S COMMITMENT TO THE ENVIRONMENT

In 1906, West Publishing Company began recycling materials left over from the production of books. This began a tradition of efficient and responsible use of resources. Today, up to 95 percent of our legal books and 70 percent of our college texts are printed on recycled, acid-free stock. West also recycles nearly 22 million pounds of scrap paper annually—the equivalent of 181,717 trees. Since the 1960s, West has devised ways to capture and recycle waste inks, solvents, oils, and vapors created in the printing process. We also recycle plastics of all kinds, wood, glass, corrugated cardboard, and batteries and have eliminated the use of Styrofoam book packaging. We at West are proud of the longevity and the scope of our commitment to the environment.

Preface

COMPUTERS & INFORMATION PROCESSING, Sixth Edition marks an exciting departure from its earlier versions. Because of the fast changing market environment, a wide variety of courses exist. These courses differ in their emphasis on traditional topics, microcomputers, hands-on application software coverage, and programming. Because of this diversity in course offerings, a major attempt has been made to ensure that the Sixth Edition is sufficiently flexible to accommodate almost any course within this broad spectrum.

Toward this end, the book is offered in two versions:

- A version with an expanded BASIC supplement.
- A version which is language free.

Additionally, free supplemental manuals are available for Q-Basic and for Macintosh BASIC.

To provide even further flexibility, four separate application software manuals are available to accompany the text. These manuals provide hands-on experience for the following application software packages:

- Word Perfect 5.1, Lotus 2.2, dBASE IV, VP Expert
- Microsoft Works for the IBM
- Microsoft Works for the Macintosh
- PC Type, PC File, PC Calc

The revision work associated with the Sixth Edition has been challenging to say the least. Major developments and advances in information systems have occurred so rapidly that providing current examples is more difficult than ever before. Feedback from instructors using the text continued to provide an excellent source of ideas for making improvements. When it comes to improving content, nothing can replace the actual classroom testing of material. While prior editions of this text have been highly successful, a great deal of care went into updating and refining the latest edition. The result is a Sixth Edition textbook vastly improved in structure and substance.

New Features

Readers familiar with the fifth edition of the text will notice several changes incorporated into the Sixth Edition:

- Updated and revised application software supplement. An entirely new section has been added which covers graphical user interface software in general and, more specifically, applications that are run under Windows 3.0.
- New Articles and Highlights.
- New and updated corporate applications.
- Expanded coverage of business systems.
- Reorganized and improved coverage of computer hardware.
- Increased coverage of portable microcomputers.

- Increased coverage of microcomputer operating systems (including two new appendices).
- Increased coverage of Local Area Networks (LANs).
- Expanded chapter on programming with emphasis on program structure.
- Coverage of Arrays and Sorting has been included in the BASIC supplement.
- Updated coverage on the impact of computers in our society.

Chapter Structure

The most inspiring lectures on computers that I have had the good fortune to attend were presented by Rear Admiral Grace Hopper (Ret.), a leader in the development of early computers. In analyzing her material, which always seemed so interesting, it became apparent to me that she permitted no new concept to remain abstract. Rather, she described actual examples encouraging the listener to visualize their applications. Following Admiral Hopper's example, each chapter in this book is followed by an *Application* that shows how a corporation implements the concepts presented.

Several other important features are included within each chapter. The introductory section serves a dual purpose: as a transition between chapters and a preview of material. An *Article* with high interest appeal draws the student into the chapter. *Highlights* containing interesting computer applications or controversial topics are interspersed throughout the chapter to maintain reader interest. *Concept Summaries* enable students to review quickly the important key topics covered in the text. Chapter summary points, key terms, and review questions are also provided. A comprehensive glossary and index are placed at the end of the text.

Throughout the development of this book the emphasis has been on orienting material to students and assisting students in the learning process. Important concepts are never avoided regardless of their complexity. Many books on information processing emphasize one or two aspects of the subject—either informational relationships or computer capabilities. This book attempts to balance and blend both subjects.

Support Materials for the Instructor

The **Instructor's Manual** by Steven L. Mandell includes answers to review questions, discussion points, exercises and problems, a classroom administration section, enrichment lectures, complete testbank and additional Applications.

Westest 2.0—a computerized testing program for IBM PCs and compatible microcomputers or for the Macintosh.

Transparency acetates. Two and four-color acetates are available to qualified adopters.

Support Materials for the Student

In addition to the supplemental applications software and BASIC manuals, there is a **Student Study Guide** written by the author which includes a summary, review of key terms and definitions, and various self-testing formats for review of each chapter.

Acknowledgements

It is appropriate at this point to thank the following people who reviewed the book or provided invaluable comments based on their experience using the Fifth Edition of *Computers and Information Processing*.

Robert A. Barrett
Indiana University-Purdue at Fort Wayne
Alfred G. Borth
San Antonio College
Stephen Brown
Gannon University
Al Campbell, Jr.
Golden West College
Mary Curtis
Louisiana State University
Vernon Griffin
Austin Community College
Sharon Hill
Prince George's Community College
John Konvalina
University of Nebraska at Omaha
Diane Krebs
Valparaiso University
James R. Walters
Pikes Peak Community College
Donald J. Weinshank
Michigan State University
Judy Yaeger
Western Michigan University

Of the individuals listed, above, I would like to give special recognition to Professor Donald J. Weinshank and the students of Computer Science 115 at Michigan State University for their suggestions.

In addition, the student feedback from this course had a significant impact on the new edition.

Many individuals and companies have been involved in the development of the material for this book. The corporations whose Applications appear in this book have provided invaluable assistance. Many professionals provided the assistance required for completion of a text of this magnitude: Russ Thompson and Sarah Basinger on chapter development; Meredith Flynn on the application manuals; Sue Baumann on the BASIC Supplement and instructor material; and Sally Oates on the manuscript preparation.

The design of the book is a tribute to the many talents of Ann Rudrud. Jan Lamar carefully guided the text through the development process. And, one final acknowledgment goes to my publisher and valued friend, Clyde Perlee, Jr., for his encouragement and ideas.

Steven L. Mandell

Contents

Preface

Introduction to Information Processing 1

CHAPTER 1

- **ARTICLE:** EDS Speeds Chicago Parking Ticket Collection 2
- Introduction 3
- Computers and Information Processing 3
- Information Processing: An Overview 4
 - Data Organization 4
 - The Data Flow 6
- Concept Summary 1-1: An Overview of Information Processing 8
 - Why Computers? 9
- Concept Summary 1-2: Computer Functions 10
- Computer Classifications 10
- **HIGHLIGHT:** Will Cars of the Future Drive Themselves? 11
 - Analog vs. Digital Computers 11
 - Microcomputers 12
 - Minicomputers 13
 - Mainframes 14
 - Supercomputers 15
- Concept Summary 1-3: Factors to Consider in Buying a Computer System 16
- Using Computers In Today's Society 16
 - Computers in Business 17
 - Computers in Arts and Entertainment 19
- **HIGHLIGHT:** Automated Rent-A-Car 20
 - Computers in Education 20
 - Computers in Medicine 21
 - Computers in Government 22
- Summary Points 22
- Terms for Review 23
- Review Questions 24
- **APPLICATION:** Texas Instruments 25

The Evolution of Computers 27

CHAPTER 2

- **ARTICLE:** Micro Chip Patent Rewrites History 28
- Introduction 29
- The Technology Race 29
 - Early Developments 30
 - First Generation: 1951-1958 34
 - Second Generation: 1959-1964 36
 - Third Generation: 1965-1970 38
 - Fourth Generation: 1971-Today 39

<i>Concept Summary 2-1: The Technology Race:</i>	
<i>Generations of Computer Development</i>	41
■ HIGHLIGHT: Don't Count Silicon Out	42
The Computer Industry	42
The Hardware Industry	42
The Software Industry	44
The Microcomputer Revolution	45
The New Technology	45
■ HIGHLIGHT: Will Your Next Personal Computer	
Be Able to Read Your Handwriting?	46
Microcomputer Pioneers	46
<i>Concept Summary 2-2: The Microcomputer Revolution</i>	48
Summary Points	49
Terms for Review	50
Review Questions	51
■ APPLICATION: Kodak	52

CHAPTER 3

Introduction to Information Systems

55

■ ARTICLE: The Next Frontier is the Text Frontier	56
Introduction	57
Qualities of Information	57
<i>Concept Summary 3-1: Qualities of Information</i>	59
Fundamental Principles of Information Systems	59
What Is a System?	59
A System's Interaction with Other Systems	59
The Organization as a System	60
Components of an Information System	61
Hardware as Part of an Information System	61
Software as Part of an Information System	62
Data as Part of an Information System	62
People as Part of an Information System	63
The Value of Information Systems	64
How Businesses Use Information Systems	65
Accounting/Payroll	65
Finance/Budgeting	65
Marketing/Sales Order Processing	66
Human Resources Management/Personnel	67
Production Management/Materials Requirement Planning (MRP)	67
Engineering/Computer-Aided Engineering	68
Careers in Computers	68
Data-Processing Operations Personnel	68
■ HIGHLIGHT: Futuristic Security	69
System Development Personnel	70
■ HIGHLIGHT: A New Twist in Advertising	71
Data-Base Specialists	72
Information System Managers	72

Professional Associations 73

- AFIPS 73
- ACM 73
- DPMA 74
- ASM 74
- ICCP 74
- SIM 75

Concept Summary 3–2: Professional Associations 75

Summary Points 76

Terms for Review 77

Review Questions 77

■ **APPLICATION:** Chase Manhattan 78

Hardware

81

CHAPTER 4

■ **ARTICLE:** 'Biochips': Life Mimics Electronics 82

Introduction 83

The Central Processing Unit 83

Concept Summary 4–1: Components of the Central Processing Unit 84

Instructions 84

□ **HIGHLIGHT:** A Glimpse into the Future of Supercomputers 86

The Stored-Program Concept 86

Memory 86

- Memory Locations 86

- Primary Memory 87

- Random-Access Memory (RAM) 89

- Read-Only Memory (ROM) 89

Concept Summary 4–2: RAM and ROM 91

- Registers 91

- Cache Memory 91

The Microprocessor 91

Data Representation 92

□ **HIGHLIGHT:** Ceramic Computer Chips 93

- Binary Representation 93

- Octal Number System 95

- Hexadecimal Number System 96

- Easy-to-Do Conversion 97

- Computer Codes 98

- Code Checking 99

Summary Points 100

Terms for Review 102

Review Questions 102

■ **APPLICATION:** IBM 104

Input and Output

107

CHAPTER 5

■ **ARTICLE:** Trumpeting Use of Wireless Terminals 108

Introduction 109

Input Devices	109
Keyboards	109
Mice	109
Graphics Tablets	111
Light Pens	111
Scanners	111
Microphones	111
Source-Data Automation	112
❑ HIGHLIGHT: Can Computers Read Chinese?	117
❑ HIGHLIGHT: The Reading Machine	119
<i>Concept Summary 5-1: Input Devices</i>	120
Output Devices	120
Printers	120
Plotters	124
Visual Display Devices	125
Voice Synthesizers	127
Summary Points	127
Terms for Review	128
Review Questions	129
■ APPLICATION: Federal Express	130

CHAPTER 6

Storage Devices

133

■ ARTICLE: Library Releases Data via Laser Disc	134
Introduction	135
Classification of Storage Media	135
Sequential-Access Media	135
Magnetic Tape	135
Tape Cartridges	140
<i>Concept Summary 6-1: Characteristics of Magnetic Tape</i>	141
Direct-Access Media	141
Magnetic Disk	141
Floppy Disk	145
<i>Concept Summary 6-2: Characteristics of Magnetic Disks</i>	147
Mass Storage	147
Modern Methods of Data Storage	148
Charge-Coupled Devices	148
❑ HIGHLIGHT: Fighting Crime with Modern Technology	149
RAM Disks	149
Laser Technology	150
Compact Disks	151
❑ HIGHLIGHT: What's All the Hype?	152
Superconductors	152
Summary Points	153
Terms for Review	153
Review Questions	154
■ APPLICATION: General Dynamics	155

- **ARTICLE:** But Can You Read It Like a Book? 160
- Introduction** 161
- File Processing** 161
- Methods of File Access** 163
 - Batch File Access 163
 - Online File Access 163
- File Designs** 163
 - Sequential File Design 163
- **HIGHLIGHT:** Data Bases Aid Environmental Scientists 164
- Direct-Access File Design** 168
 - Indexed-Sequential File Design 171
- **HIGHLIGHT:** Dictionary Data Base 171
- Concept Summary 7-1: Comparison of File Designs* 174
- Data Bases** 174
 - Structuring Data 175
 - Data-Base Management Systems 180
 - Assessment of the Data-Base Approach 180
- Summary Points** 181
- Terms for Review** 181
- Review Questions** 182
- **APPLICATION:** Art Connection Network 183

Microcomputers

187

CHAPTER 8

- **ARTICLE:** Rivals IBM, Apple Team Up for Open Platform 188
- Introduction** 189
- Microcomputers: An Overview** 189
 - The Microprocessor 190
 - The Instruction Set 190
 - The Machines Themselves 191
- **HIGHLIGHT:** Fishing by Computer 194
- Concept Summary 8-1: Microcomputer Sizes* 195
- Microcomputer Operating Systems** 195
 - Graphic User Interfaces vs. Command-Line User Interfaces 198
- Concept Summary 8-2: Graphic User Interfaces vs. Command-Line User Interfaces* 198
- Apple Macintosh Conventions 199
- IBM PC-DOS and MS-DOS Conventions 200
- Using Microcomputers** 204
 - Software Packages 204
 - Compatibility 205
 - Users Groups 206
- Purchasing Microcomputers** 207
 - The Big Picture 207

- ❑ **HIGHLIGHT:** Mail-Order Mania 208
 - Evaluating Software 210
 - Choosing the Hardware 211
 - Buyer's Checklist 214
- Summary Points** 215
- Terms for Review** 216
- Review Questions** 216
- **APPLICATION:** Compaq Computer Corporation 218

CHAPTER 9

Telecommunications and Networks 221

- **ARTICLE:** Marist Creating a High-Tech Campus 222
- Introduction** 223
- Telecommunications** 223
- Communication Channels** 223
 - Types of Channels 224
 - Grades of Channels 226
- Concept Summary 9-1: Communication Channels* 226
- Modes of Channels 226
- Data Transmission** 228
- Input/Output Operations** 229
- Communication Hardware** 231
 - Multiplexers, Concentrators, and Selectors 231
 - Programmable Communications Processors 233
- Networks** 233
 - Single CPU Networks 233
 - Multiple CPU Networks 234
 - Local-Area Networks (LANs) 236
- ❑ **HIGHLIGHT:** Logistical LAN 237
- Concept Summary 9-2: Network Configurations* 238
- Telecommunication Standards** 239
- Telecommunication and Network Applications** 239
 - Electronic Banking 239
- ❑ **HIGHLIGHT:** Scheduling Communication Satellites 240
 - Telecommuting 241
 - Information Services 241
 - Bulletin Boards 244
- Summary Points** 245
- Terms for Review** 246
- Review Questions** 247
- **APPLICATION:** The Dow Chemical Company 248

CHAPTER 10

System Software 251

- **ARTICLE:** Fishing Around with Virtual Computing 252
- Introduction** 253

Categories of Programs 253

System Programs 253

Application Programs 254

Operating Systems 254

Development of Operating Systems 254

Functions of Operating Systems 254

Concept Summary 10-1: Relationships Among User, Operating System, and Computer Hardware 255

Types of Processing Handled by Operating Systems 255

Components of Operating Systems 256

❑ **HIGHLIGHT:** Why Are Open Systems Important? 259

Concept Summary 10-2: Types of Operating System Programs 260

Multiprogramming 260

❑ **HIGHLIGHT:** Macintosh User Interface Still on Top 262

Virtual Memory 262

Multiprocessing 265

Concept Summary 10-3: Developments that Improved Computer Efficiency 268

Summary Points 268

Terms for Review 269

Review Questions 270

■ **APPLICATION:** Microsoft Corporation 271

Software Development

273

CHAPTER 11

■ **ARTICLE:** An Endless Campaign to Simplify Software 274

Introduction 275

Defining and Documenting the Problem 275

Concept Summary 11-1: The Steps in the Software Development Process 276

Designing and Documenting a Solution 278

The Four Basic Logic Patterns 278

Structured Programming Techniques 280

❑ **HIGHLIGHT:** The Art of Programming 283

Top-Down Design 284

Pseudocode 287

Flowcharts 288

Action Diagrams 291

Using Structured Design Techniques in Industry 292

Writing and Documenting the Program 293

Structured Coding 294

Concept Summary 11-2: Structured Programming Techniques 295

Types of Statements 295

Debugging and Testing the Program 296

❑ **HIGHLIGHT:** Software Development: 2000 297

Summary Points 298

Terms For Review 299

Review Questions 300

■ **APPLICATION:** Allied Van Lines 301

- **ARTICLE:** Cobol: The Successful Failure 304
- Introduction 305
- Standardization of Languages 305
- Categorizing Languages 306
- Translating Languages 307
- Low-Level Languages 307
 - Machine Language 307
 - Assembly Language 308
- **HIGHLIGHT:** That Really Bugs Me! 310
- High-Level Languages 310
 - FORTRAN 310
 - BASIC 311
 - Pascal 314
 - COBOL 316
 - Ada 319
 - C 319
