Publishing House of the Czechoslovak Academy of Sciences

*To my teacher,
Professor Josef Charvát*

CONTENTS

I. Introduction	13
References	15
II. Historical Review	18
References	22
III. Morphology	24
A. The hypothalamus	24
Topography of the hypothalamic nuclei	25
Histology of the hypothalamic nuclei	28
Neural connections of the hypothalamus with the other parts of the central nervous system	29
B. The hypophysis	33
Vascularization of the hypophysis	36
Innervation of the hypophysis	38
Histochemistry and biochemistry of the hypophysis	39
C. Connections of the hypothalamus with the hypophysis	43
Hypothalamo-hypophysial neural communications	44
Vascular communications (the hypophysial portal system)	47
D. Neurosecretion	52
Basic characteristics of neurosecretory systems	52
Morphological characteristics of neurosecretion in mammals	54
The relation of neurosecretion to the adenohypophysis	55
Changes in neurosecretion under different endocrine influences	56
Changes in neurosecretion after hypophysectomy and transection of the hypophysial stalk	58
References	59
IV. Functions of the Hypothalamus	69
Some biochemical characteristics of the hypothalamus	71
Hypothalamic enzymes	72
Metabolism of the hypothalamus	74
Coordination of the functions of the autonomic nervous system	77
The hypothalamus and the adrenal medulla	77
Vasomotor reactions	78
Thermoregulation	79
Sleeping and waking	81
Coordination of metabolism and food intake	81
Rate of food intake and obesity: hypothalamic participation	85
Résumé on "extraendocrine" functions of the hypothalamus	86
References	88
V. Basic Characteristics of the Function of the Hypothalamo-Hypophysial System	95
Feed-back mechanisms	98
Functions of the hypophysial stalk	102

The isolated adenohypophysis as a model for the study of hypothalamic adenohypophysiotrophic (releasing) factors	105
Participation of the hypothalamo-hypophysial system in mediation of environmental influences on the endocrine system	108
Remarks on biological rhythms	110
References	111
VI. Hypothalamic Regulation of ACTH Secretion	115
A. Influence of the external environment on ACTH secretion, stress	115
Influence of the "normal" external environment on ACTH secretion	116
Influence of stress on ACTH secretion	118
B. Secretion of ACTH by the adenohypophysis disconnected from the hypothalamus	121
Secretion of ACTH by adenohypophysial grafts	123
Secretion of ACTH after transection of the hypophysial stalk	124
C. Relationship of the hypothalamic nuclei to ACTH secretion	125
Effect of lesions of the hypothalamic nuclei	127
Effect of stimulation of the hypothalamic nuclei	130
D. Chemical influences and ACTH secretion	132
The feed-back regulating ACTH secretion	132
The mechanism of the feed-back regulating ACTH secretion	134
The specificity of feed-back mechanisms regulating ACTH secretion	138
Pharmacological stimulation and block of ACTH secretion	138
Pharmacological stimulation of ACTH secretion	139
Pharmacological block of ACTH secretion	141
Participation of the neurohypophysis in ACTH secretion	144
The neurohypophysis as a source of ACTH	145
Relationships between ACTH and vasopressin secretion	146
Pharmacological induction of simultaneous secretion of vasopressin and ACTH	147
Information provided by lesions of the hypothalamic nuclei	148
Stimulation of ACTH secretion by neurohypophysial hormones	149
Résumé of present views on the participation of vasopressin in ACTH secretion	152
The corticotrophin-releasing factor (CRF)	153
Attempts to demonstrate CRF in vivo	154
Demonstration of CRF in vitro	156
Demonstration of CRF in the portal blood	158
Extrahypothalamic incidence of CRF	159
The structure of CRF	159
E. Résumé on hypothalamic regulation of ACTH secretion	160
References	162
VII. Central Nervous Regulation of Aldosterone Secretion	177
A. Influence of the external environment on aldosterone secretion	177
B. Effect of changes in the milieu intérieur on aldosterone secretion	178
C. The mechanism of central regulation of aldosterone secretion	180
The participation of the adenohypophysis	180
Effect of lesions of the central nervous system on aldosterone secretion	181
Effect of extracts of the central nervous system, adrenoglomerulotrophin	182

D. Résumé on central nervous regulation of aldosterone secretion	183
References	184
VIII. Hypothalamic Regulation of TSH Secretion	187
A. Influence of the external environment on TSH secretion, stress	188
Influence of the "normal" external environment on TSH secretion	188
Influence of different forms of stress on TSH secretion. Dissociation of TSH and ACTH secretion	189
Effect of cold on TSH secretion	192
Résumé on the effect of stress on TSH secretion	194
B. Secretion of TSH by the adenohypophysis disconnected from the hypothalamus	194
Secretion of TSH in adenohypophysial grafts	195
Secretion of TSH after transection of the hypophysial stalk	196
Résumé on secretion of TSH by the adenohypophysis disconnected from the hypothalamus	197
C. Relationship of the hypothalamic nuclei to TSH secretion	197
Effect of lesions of the hypothalamic nuclei	199
Effect of stimulation of the hypothalamic nuclei	202
D. Chemical influences and TSH secretion	203
The feed-back regulating TSH secretion	204
The mechanism of the feed-back regulating TSH secretion	207
Accumulation of thyroid hormones in the hypophysis and hypothalamus	210
Specificity of the feed-back regulating TSH secretion	212
Résumé of findings on the feed-back regulating TSH secretion	214
Pharmacological stimulation and block of TSH secretion	214
Pharmacological stimulation of TSH secretion	215
Pharmacological block of TSH secretion	215
Participation of the neurohypophysis in TSH secretion	220
The thyrotrophin-releasing factor (TRF)	223
1. General remarks	226
2. Methods	227
2.1. Preparation of adenohypophysial homogenates	227
2.2. Determination of phosphatase activity	227
2.3. Buffer solutions	228
2.4. Statistical evaluation of the results	229
3. The hypothalamic factor activating adenohypophysial acid phosphatases in vitro	229
3.1. Crude aqueous extracts of rat hypothalamus	229
3.2. Fractionation of aqueous extracts of rabbit hypothalamus	231
3.3. Preparation of the nonprotein fraction of bovine hypothalamic extracts	234
3.4. Analysis of the effect of the nonprotein fraction of bovine hypo- thalamus and comparison with the same fraction of temporal lobe extract	234
3.5. The nature of the active factor	237
3.6. Further purification of the active factor by high voltage electro- phoresis and paper chromatography	238

3.7. Isolation of the active factor by gel filtration on Sephadex and demonstration of its peptide character	240
3.8. Résumé	242
4. Relationships between adenohipophysial acid phosphatases and TSH secretion	242
4.1. Characteristics of adenohipophysial phosphatases (pH optima)	243
4.2. Possibilities of inhibition of adenohipophysial acid phosphatases	244
4.3. The effect of different endocrine states on hypophysial phosphatases	245
4.4. Cytotopochemistry of adenohipophysial acid phosphatases and the effect of experimental hypothyroidism	246
4.5. Effect of thyroxine on adenohipophysial acid phosphatases in vitro	246
4.6. Résumé	247
5. Indirect evidence of identity of the factor activating adenohipophysial acid phosphatases with TRF	248
5.1. Detailed study of changes in adenohipophysial acid phosphatase activity in experimental hypo- and hyperthyroidism in rats	248
5.2. Changes in the concentration of the active factor in the hypothalamus in experimental hypo- and hyperthyroidism	251
5.3. Effect of stress on adenohipophysial acid phosphatase activity and on the hypothalamic concentration of the factor activating acid phosphatase in the hypophysis in vitro	254
5.4. Effect of experimental hypo- and hyperthyroidism on the sensitivity of the adenohipophysis to the hypothalamic factor activating adenohipophysial acid phosphatases in vitro	256
5.5. Influence of the thyroid hormones on the effect of the factor activating acid phosphatases in vitro	257
5.6. Résumé	259
6. Direct evidence of TRF activity in fractions of hypothalamic extracts	260
6.1. Secretion of TSH by adenohipophysial autografts in the anterior chamber of the eye of hypophysectomized rats	261
6.2. First attempts do demonstrate the effect of the fraction on TSH secretion by systemic administration	263
6.3. Effect of the electrophoretically purified fractions of bovine hypothalamic extract on TSH release from rat adenohipophyses in vitro	264
6.4. Effect of the fraction purified by gel filtration on Sephadex on TSH release from rat adenohipophyses in vitro	266
6.5. Effect of the fraction purified by gel filtration on Sephadex on TSH release from guinea pig and rat adenohipophyses in vivo	267
6.6. Résumé	269
7. Discussion	269
8. Résumé	272
E. Résumé on hypothalamic regulation of TSH secretion	274
References	276

IX. Hypothalamic Regulation of Gonadotrophin Secretion	292
A. Influence of the external environment on gonadotrophin secretion	293
Influence of light on gonadotrophin secretion	294
Mechanisms of reflex ovulation	296
Participation of the central nervous system in the regulation of cyclical sexual processes	298
Effect of stress on gonadotrophin secretion	299
B. Secretion of gonadotrophins by the adenohipophysis disconnected from the hypothalamus	300
Secretion of gonadotrophins by adenohipophysial grafts	301
Secretion of gonadotrophins after transection of the hypophysial stalk	303
C. Relationship of the hypothalamic nuclei to gonadotrophin secretion	305
Effects of lesions of the hypothalamic nuclei	305
Evidence of general inhibition of gonadotrophic function of the adenohipophysis after hypothalamic lesions	306
Evidence of stimulation of FSH secretion by hypothalamic lesions	307
Evidence of deinhibition of LMTH secretion by hypothalamic lesions	308
Résumé on the effect of lesions of the hypothalamus on gonadotrophin secretion	309
Effects of stimulation of the hypothalamic nuclei	309
D. Chemical influences and gonadotrophin secretion	312
The feed-back mechanism regulating gonadotrophin secretion	313
Influence of sex hormones on FSH secretion	315
Influence of sex hormones on LH secretion	316
Influence of sex hormones on LMTH secretion	316
Mechanisms of the feed-back regulating gonadotrophin secretion	317
Specificity of feed-back mechanisms regulating gonadotrophin secretion	319
Résumé on feed-back mechanisms regulating gonadotrophin secretion	321
Pharmacological stimulation and block of gonadotrophin secretion	321
Pharmacological stimulation of gonadotrophin secretion	322
Stimulation of gonadotrophin secretion by substances occurring normally in the body	322
Stimulation of gonadotrophin secretion by substances foreign to the body	323
Pharmacological block of gonadotrophin secretion	326
Participation of the neurohypophysis in gonadotrophin secretion	330
Relationships between oxytocin and LMTH	331
Hypothalamic factors influencing gonadotrophin secretion	333
E. Résumé on hypothalamic regulation of gonadotrophin secretion	335
References	337
X. Hypothalamic Regulation of STH Secretion	354
A. Influence of the external environment on STH secretion	354
B. Secretion of STH by the adenohipophysis disconnected from the hypothalamus	355
Secretion of STH by adenohipophysial grafts	355
STH secretion after transection of the hypophysial stalk	356
C. Relationship of the hypothalamic nuclei to STH secretion	357

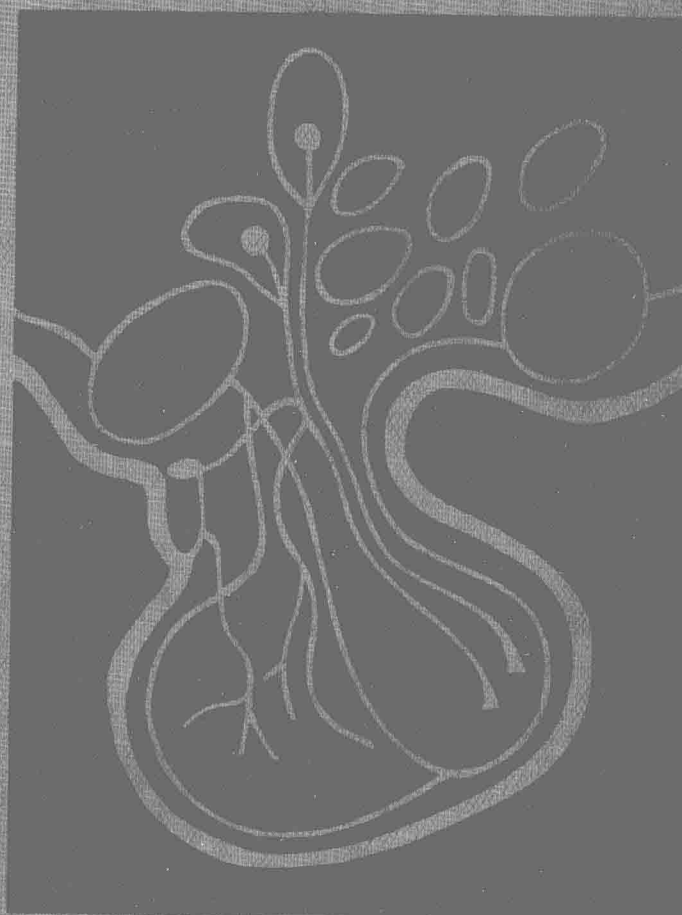

Hypothalamic lesions, carbohydrate metabolism and growth (possible relationships to STH)	358
Stimulation of the hypothalamus and carbohydrate metabolism (possible relationships to STH)	359
D. Chemical influences and STH secretion	360
E. Résumé on hypothalamic regulation of STH secretion	362
References	362
XI. Hypothalamic Regulation of MSH Secretion	365
References	366
XII. Hypothalamic Regulation of Vasopressin and Oxytocin Secretion	368
A. Influence of the external environment on vasopressin and oxytocin secretion	369
Influence of the "normal" external environment on vasopressin and oxytocin secretion	369
Effect of stress on vasopressin and oxytocin secretion	371
B. Physiological stimuli leading to vasopressin and oxytocin secretion	372
Physiological stimuli leading to vasopressin secretion	373
Physiological stimuli leading to oxytocin secretion	374
Relationships between vasopressin and oxytocin secretion	375
C. Relationships between the anterior hypothalamus and the neurohypophyseal hormones	376
Presence of vasopressin and oxytocin in the anterior hypothalamus	376
Changes after hypophysectomy and transection of the hypophyseal stalk	377
Effect of lesions and stimulation of the hypothalamus on vasopressin and oxytocin secretion	378
D. Chemical factors and vasopressin and oxytocin secretion	380
Stimulant effect of vagomimetics	381
Inhibitory effect of sympathicomimetics	382
Effect of other neurotropic substances	382
Glucocorticoids	383
E. Relationship of the neurohypophyseal hormones to the function of the adenohypophysis	384
F. Résumé on hypothalamic regulation of neurohypophyseal secretion	385
References	386
XIII. The Number of Hypothalamic Adenohypophysiotrophic Factors	394
Localization of control of adenohypophyseal functions in the hypothalamus	395
Relationships between secretion of individual adenohypophyseal hormones	396
Mechanisms of the separate regulation of secretion of individual adenohypophyseal trophins	400
Mechanisms of the transport of hypothalamic factors to the adenohypophysis	401
Mechanisms of action of hypothalamic factors in the adenohypophysis	403
Résumé on the number of hypothalamic adenohypophysiotrophic factors	405
References	406
XIV. Higher Nervous Centres Regulating the Function of the Hypothalamo-Hypophyseal System	409
The limbic system	410
The reticular system	410

Common characteristics of the limbic system, the reticular system and the hypothalamo-hypophysial system	411
General characteristics of the action of higher structures	412
Higher centres for hypothalamic regulation of ACTH secretion	414
Participation of the limbic system	414
Participation of the reticular system	416
Higher centres for hypothalamic regulation of TSH secretion	417
Higher centres for hypothalamic regulation of gonadotrophin secretion	419
Participation of the limbic system	419
Participation of the reticular system	421
Higher centres for hypothalamo-neurohypophysial activity	422
Résumé on higher centres for the activity of the hypothalamo-hypophysial system	423
References	425

XV. Outlines of the Clinical Picture of Hypothalamo-Hypophysial Syndromes 430

Introduction	430
A. Hypothalamic symptomatology	431
Neurovegetative symptomatology	432
Metabolic and alimentary symptomatology	433
Endocrine symptomatology	434
Other symptoms	435
Résumé on hypothalamic symptomatology	436
B. Aetiology of hypothalamo-hypophysial syndromes	436
Delayed endocrine effects of concussion of the brain	441
C. Classification of hypothalamo-hypophysial syndromes	442
I. Participation of the hypothalamus in common endocrinopathies	444
Diabetes mellitus	444
Hyperthyroidism	445
Hypothalamic disturbances and hyperthyroidism	446
Hypophysial and thyroid autonomy in the development of hyperthyroidism	448
Abnormal thyroid stimulator in the genesis of human hyperthyroidism	449
Relationships between hypocorticalism and hyperthyroidism	450
Simmonds' cachexia and panhypopituitarism	451
Isolated forms of hypopituitarism	453
Growth disorders	454
Hyperpituitarism	455
II. Hypothalamo-hypophysial syndromes in the strict meaning of the term	457
Hypothalamic coma and hypopituitary coma	457
Diabetes insipidus	459
Syndromes caused by excess vasopressin	462
Primary "vasopressinism"	462
Cyclical oedema (premenstrual tension)	462
Central hypernatraemia and central hyponatraemia	463
Pubertas praecox	465
Adiposogenital dystrophy	468
The Laurence-Bardet-Moon-Biedl syndrome	469

The Morgagni-Stewart-Morel syndrome	470
Clinical endocrine syndromes in treatment with ataractics	472
The Chiari-Fremmel syndrome	473
Other syndromes	474
III. Hypothalamic participation in some metabolic syndromes	474
Obesity	475
Arteriosclerosis	477
D. Outlines of the possibilities of diagnosing hypothalamo-hypophysial syn- dromes	479
General diagnostics	480
Specific diagnostics	481
E. Outlines of possibilities of treating hypothalamo-hypophysial syndromes	483
References	487
Author Index	502
Subject Index	527

CONTENTS

I. Introduction	13
References	15
II. Historical Review	18
References	22
III. Morphology	24
A. The hypothalamus	24
Topography of the hypothalamic nuclei	25
Histology of the hypothalamic nuclei	28
Neural connections of the hypothalamus with the other parts of the central nervous system	29
B. The hypophysis	33
Vascularization of the hypophysis	36
Innervation of the hypophysis	38
Histochemistry and biochemistry of the hypophysis	39
C. Connections of the hypothalamus with the hypophysis	43
Hypothalamo-hypophysial neural communications	44
Vascular communications (the hypophysial portal system)	47
D. Neurosecretion	52
Basic characteristics of neurosecretory systems	52
Morphological characteristics of neurosecretion in mammals	54
The relation of neurosecretion to the adenohypophysis	55
Changes in neurosecretion under different endocrine influences	56
Changes in neurosecretion after hypophysectomy and transection of the hypophysial stalk	58
References	59
IV. Functions of the Hypothalamus	69
Some biochemical characteristics of the hypothalamus	71
Hypothalamic enzymes	72
Metabolism of the hypothalamus	74
Coordination of the functions of the autonomic nervous system	77
The hypothalamus and the adrenal medulla	77
Vasomotor reactions	78
Thermoregulation	79
Sleeping and waking	81
Coordination of metabolism and food intake	81
Rate of food intake and obesity; hypothalamic participation	85
Résumé on "extraendocrine" functions of the hypothalamus	86
References	88
V. Basic Characteristics of the Function of the Hypothalamo-Hypophysial System	95
Feed-back mechanisms	98
Functions of the hypophysial stalk	102

The isolated adenohipophysis as a model for the study of hypothalamic adenohipophysiotrophic (releasing) factors	105
Participation of the hypothalamo-hipophysial system in mediation of environmental influences on the endocrine system	108
Remarks on biological rhythms	110
References	111
VI. Hypothalamic Regulation of ACTH Secretion	115
A. Influence of the external environment on ACTH secretion, stress	115
Influence of the "normal" external environment on ACTH secretion	116
Influence of stress on ACTH secretion	118
B. Secretion of ACTH by the adenohipophysis disconnected from the hypothalamus	121
Secretion of ACTH by adenohipophysial grafts	123
Secretion of ACTH after transection of the hypophysial stalk	124
C. Relationship of the hypothalamic nuclei to ACTH secretion	125
Effect of lesions of the hypothalamic nuclei	127
Effect of stimulation of the hypothalamic nuclei	130
D. Chemical influences and ACTH secretion	132
The feed-back regulating ACTH secretion	132
The mechanism of the feed-back regulating ACTH secretion	134
The specificity of feed-back mechanisms regulating ACTH secretion	138
Pharmacological stimulation and block of ACTH secretion	138
Pharmacological stimulation of ACTH secretion	139
Pharmacological block of ACTH secretion	141
Participation of the neurohipophysis in ACTH secretion	144
The neurohipophysis as a source of ACTH	145
Relationships between ACTH and vasopressin secretion	146
Pharmacological induction of simultaneous secretion of vasopressin and ACTH	147
Information provided by lesions of the hypothalamic nuclei	148
Stimulation of ACTH secretion by neurohipophysial hormones	149
Résumé of present views on the participation of vasopressin in ACTH secretion	152
The corticotrophin-releasing factor (CRF)	153
Attempts to demonstrate CRF in vivo	154
Demonstration of CRF in vitro	156
Demonstration of CRF in the portal blood	158
Extrahypothalamic incidence of CRF	159
The structure of CRF	159
E. Résumé on hypothalamic regulation of ACTH secretion	160
References	162
VII. Central Nervous Regulation of Aldosterone Secretion	177
A. Influence of the external environment on aldosterone secretion	177
B. Effect of changes in the milieu intérieur on aldosterone secretion	178
C. The mechanism of central regulation of aldosterone secretion	180
The participation of the adenohipophysis	180
Effect of lesions of the central nervous system on aldosterone secretion	181
Effect of extracts of the central nervous system, adrenoglomerulotrophin	182
