

THE **SADTLER**

**STANDARD
SPECTRA**

SADTLER RESEARCH LABORATORIES, INC.

The publication of the physical data of the Sadtler Standard Spectra and the Sadtler Commercial Spectra is intended to be descriptive. The samples of the materials there
selected have come generally from other sources than our own laboratories and frequently
without the donors' knowledge of their part in this publication.

On the other hand every effort is made by Sadtler Research Laboratories, Inc. to assure
the reliability of the published spectra. When improved data is available or errors are
called to our attention we revise and reissue the proper replacement spectra.

SADTLER RESEARCH LABORATORIES, INC. DOES NOT WARRANT MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, OR MAKE ANY OTHER
WARRANTY OR AGREEMENT EXPRESS OR IMPLIED WITH RESPECT TO THE
SPECTRA CONTAINED HEREIN. IF ANY MODEL OR SAMPLE WAS SHOWN TO
BUYER, SUCH MODEL OR SAMPLE WAS USED MERELY TO ILLUSTRATE THE
ARTICLE AND NOT TO REPRESENT THAT ANY SPECTRA CONTAINED HEREIN

PREPARED AND PRESCRIPTION DRUGS

ULTRAVIOLET SPECTRA

This collection contains spectral data on 340 prepared drugs which are commercially available in dosage forms. The selection of materials for inclusion in the publication was made from the Physicians Desk Reference, 28th Edition, 1974. Preparations containing both a single active ingredient and multi-ingredient formulations are represented in this collection.

The data in this publication has been developed to provide the analytical chemist with a rapid, preliminary method of distinguishing compounded materials, without the time required for prolonged separation procedures. The sample preparation technique is not intended to provide spectra of the active pharmaceutical ingredient but representative spectra of the complete formulation. Reference spectra for identification of purified pharmaceutical ingredients are available in separate publications.

EXPERIMENTAL

The sample preparation procedure was as follows:

The complete pill or capsule content was ground and dissolved in 0.1N HCl. The extract was then filtered and diluted to a sufficient degree to obtain the spectrum and the ultraviolet spectrum in an acid medium was prepared. The acid solution was then treated with enough KOH to render it alkaline and the spectrum in basic medium prepared. In some cases the basic solution caused the material to precipitate and in these instances the precipitation is noted on the page and that spectrum is omitted.

INSTRUMENTATION

The spectra were determined on a Cary Model 15 spectrophotometer. Wavelength calibration and absorbance were checked periodically using a standard potassium chromate solution and for each run the base line was set at zero absorbance with solvent in reference and sample cells.

SPECTRA PRESENTATION

The spectra were prepared in the 200 to 500 m μ region. The scans of the acidic extract and basic extract for each compound are labelled accordingly with the location of the strongest peaks added, and printed on the same page as the descriptive data.

DATA PRESENTATION

The trade name and dosage form of each drug is shown above the corresponding spectra together with the generic or chemical name when available. A brief description of the tablet or capsule and identifying markings is included and the manufacturer of the material when known. The reference text for much of the data is the Physicians' Desk Reference, 28th Edition, 1974.

PREPARED AND PRESCRIPTION DRUGS

ULTRAVIOLET SPECTRA

INDEXES

The indexes to this collection have been devised to provide easy access to the data from either the compound identity or spectral data approach.

The alphabetical index lists the materials by tradename and, in cases where there is a single active ingredient, by the generic pharmaceutical name.

The classification index lists the materials according to therapeutic activity, some sixteen categories are used as class codes and these are listed at the front of the classification index.

The ultraviolet locator index lists the spectral data according to the locations of the absorbance maxima and their intensities for each material. This provides an approximate method for identifying unknown spectra.

The numerical index is a listing of the contents of this collection according to their sequential UV spectrum numbers.

Cross-references to published infrared spectral data are provided by listing the corresponding grating spectrum numbers published by Sadtler Research Laboratories in the column titled GRATING in each index.

The column titled MFG CODE in each index refers to the arbitrarily assigned manufacturers code number. A table of the manufacturers names and corresponding codes is given on the following page.

LIST OF MANUFACTURERS
