TO THE LATE *Samuel Wendell Williston*  
AND TO *William King Gregory*  
AUTHOR AND EDITOR OF THE ORIGINAL  
“*Osteology of the Reptiles*”  
THIS BOOK IS DEDICATED

## *Preface*

After the death, in 1918, of Samuel Wendell Williston, leading American authority on fossil reptiles, there was found the greater part of a draft of a projected volume on the osteology of reptiles. Despite the lack of the revision and supplementation which he had obviously intended, it was seen that the manuscript was one of great value. Dr W. K. Gregory undertook the difficult task of editing the work, and through the good offices and support of Dr Thomas Barbour the book was published in 1925. It has proved an invaluable aid to the student of reptiles, fossil and Recent.

In the late 1930's the stock of the book had become exhausted, and at Dr Barbour's suggestion I volunteered to revise the work. But it soon became obvious that so many advances had been made in the field that a mere revision in the usual sense would not suffice. I decided to write afresh, with the feeling that Williston himself, had he then been alive, would have done the same. I have, however, attempted to retain the general pattern of the original work. As in the original, the volume consists basically of two major portions: a structure-by-structure account of the reptile skeleton, followed by a classification of the various reptile groups based on osteological characters. In addition to a fuller treatment of these topics, I have made some minor additions, such as introductory discussions of other organ systems in relation to the skeleton and of the nature and classification of skeletal materials, and have included a restricted amount of data on embryological development.

Dr Williston had given in his draft a partial list of reptile genera. As he presumably intended to do himself before publication, I have attempted a comprehensive list of genera arranged by families and, since many morphological works use generic terms not now current among systematists, have included synonyms as well (to a total of about five thousand generic names).

Work was begun a number of years ago, and a considerable amount of manuscript accumulated. Additional duties, partially due to the war, forced me to suspend work on the project, and it was not until the spring of 1951 that I felt free to return to it and to carry it through to completion.

It is obvious to anyone familiar with reptiles that an attempt at a comprehensive and yet accurate account of their osteology must, almost of necessity, fall short of its goal. Limitations both of time and of available materials have made it necessary for me to rely on the literature rather than on original specimens in a majority of instances. This literature, although voluminous, has many lacunae, and although many fossil types are incompletely known—due

to lack of material or adequate preparation—I am impressed by the fact that we know less about many modern types than we do of many fossil groups. As regards the systematic listings, anyone familiar with this type of work will agree that it would have required several lifetimes of work to consider adequately the nomenclatorial problems involved.

My indebtedness to friends and colleagues is great. I have enjoyed many discussions of early reptile groups, notably the therapsids, with Professor D. M. S. Watson (at this writing an Alexander Agassiz Professor in the Museum of Comparative Zoology). I have utilized to the full Dr Ernest Williams's broad knowledge of the Chelonia in considering that group; Dr Rainer Zangerl furnished data regarding Cretaceous turtles and kindly sent me advanced proofs of two monographs on Cretaceous turtles. Dr Paulo Vanzolini, of the São Paulo Museum, gave valuable advice on the Squamata. I have discussed various points in the anatomy and classification of lizards and snakes with Dr Charles M. Bogert and Mr Sam McDowell, of the American Museum of Natural History; I have read with profit the manuscript of their forthcoming paper on *Lanthanotus* and have incorporated in the classification a number of suggestions made there. Mr Garth Underwood, of the University College of the West Indies, and Dr G. Haas, of the University of Jerusalem, gave valuable criticism of the parts of my manuscript dealing with the Squamata. Both Curator Arthur Loveridge, of the Museum of Comparative Zoology, and Dr K. P. Schmidt, of the Chicago Natural History Museum, have twice given detailed criticism of my generic lists of the modern reptile orders; I wish to absolve them, however, of responsibility for my occasional unorthodoxies and for inaccuracies. I am grateful to the W. B. Saunders Company for the privilege of borrowing a number of illustrations from my work, *The Vertebrate Body*, published by them. The great majority of the illustrations in this volume are the work of Mrs Dorothy Marsh. Dr E. C. Colbert furnished data on the early dinosaur *Coelophysis*, which he is currently describing. I am grateful to Dr W. G. Kühne for the privilege of reading a manuscript of his unpublished work on the skull of *Oligokyphus* and of publishing drawings based on his figures. Dr E. C. Olson kindly furnished a copy of a work in press on reptiles from the San Angelo Formation. I am indebted to Drs James and Margaret Steen Brough for solution of the puzzling problem of identity of the form here termed *Gephyrostegus*. Dr Tilly Edinger has critically read the manuscript of Part I. As ever, I am very greatly indebted to Miss Nelda Wright for constant aid throughout the preparation of this volume.

ALFRED SHERWOOD ROMER

CAMBRIDGE, MASS.

December 1952

NOTE. A few additions and changes have been made in the text subsequent to the time of closing of the manuscript, but for the most part it has been impossible to incorporate the data of publications of 1953 and later years.

Infraorder Coelurosauria . . . . .	610
Family Ammosauridae . . . . .	611
Family Hallopodidae . . . . .	611
Family Podokesauridae . . . . .	611
Family Segisauridae . . . . .	611
Family Coeluridae . . . . .	611
Family Ornithomimidae . . . . .	612
Infraorder Carnosauria . . . . .	613
Family Palaeosauridae . . . . .	614
Family Teratosauridae . . . . .	614
Family Megalosauridae . . . . .	615
Family Tyrannosauridae . . . . .	616
Infraorder Prosauropoda . . . . .	616
Family Thecodontosauridae . . . . .	617
Family Plateosauridae . . . . .	617
Family Melanorosauridae . . . . .	618
Theropoda incertae sedis . . . . .	618
Suborder Sauropoda . . . . .	619
Family Brachiosauridae . . . . .	620
Subfamily Cetiosaurinae . . . . .	620
Subfamily Brachiosaurinae . . . . .	620
Subfamily Camarasaurinae . . . . .	621
Subfamily Euhelopodinae . . . . .	621
Family Titanosauridae . . . . .	621
Subfamily Titanosaurinae . . . . .	622
?Subfamily Apatosaurinae . . . . .	622
Subfamily Diplodocinae . . . . .	622
Subfamily Dicraeosaurinae . . . . .	624
Sauropoda incertae sedis . . . . .	624
Order Ornithischia . . . . .	624
Suborder Ornithopoda . . . . .	627
Family Hypsilophodontidae . . . . .	628
Family Iguanodontidae . . . . .	628
Family Hadrosauridae . . . . .	629
Family Psittacosauridae . . . . .	631
Family Pachycephalosauridae . . . . .	631
Suborder Stegosauria . . . . .	632
Family Stegosauridae . . . . .	632
Subfamily Scelidosaurinae . . . . .	633
Subfamily Stegosaurinae . . . . .	633
Suborder Ankylosauria . . . . .	634
Family Acanthopholidae . . . . .	635

SUBCLASS ARCHOSAURIA ( <i>cont.</i> )		
Family Nodosauridae		page 635
Suborder Ceratopsia		636
Family Protoceratopsidae		637
Family Ceratopsidae		638
Family Pachyrhinosauridae		639
Order Pterosauria		639
Suborder Rhamphorhynchoidea		641
Family Rhamphorhynchidae		642
Suborder Pterodactyloidea		642
Family Pterodactylidae		642
Family Ornithodesmidae		644
Family Ornithocheiridae		644
Pterosauria incertae sedis		644
SUBCLASS UNCERTAIN		645
Order Mesosauria		645
Family Mesosauridae		646
SUBCLASS ICHTHYOPTERYGIA		647
Order Ichthyosauria		647
Family Mixosauridae		649
Family Omphalosauridae		649
Family Shastasauridae		650
Family Ichthyosauridae		650
Family Stenopterygiidae		651
SUBCLASS EURYAPSIDA		652
Order Protorosauria		654
Suborder Araeoscelidia		657
Family Araeoscelidae		657
Family Protorosauridae		657
Family Tanystropheidae		658
Family Weigeltisauridae		658
Suborder Trilophosauria		658
Family Trilophosauridae		658
Order Sauropterygia		659
Suborder Nothosauria		660
Family Nothosauridae		662
Family Cymatosauridae		662
Family Pachypleurosauridae		663
Family Simosauridae		663
Nothosauria incertae sedis		663
Suborder Plesiosauria		663
?Superfamily Pistosauroidea		665
Family Pistosauridae		665
Superfamily Plesiosauroidea		665
Family Plesosauridae		665
Family Thaumatosauridae		666
Family Elasmosauridae		666
Superfamily Pliosauroidea		667
Family Pliosauridae		667

<b>SUBCLASS EURYAPSIDA (cont.)</b>		
Family Polycotylidae . . . . .		<i>page</i> 667
Family Leptocleididae . . . . .		667
Plesiosauria incertae sedis . . . . .		668
Suborder Placodontia . . . . .		668
Family Helveticosauridae . . . . .		669
Family Placodontidae . . . . .		669
• Family Placochelyidae . . . . .		670
Family Henodontidae . . . . .		670
<b>SUBCLASS SYNAPSIDA</b> . . . . .		671
Order Pelycosauria . . . . .		673
Suborder Ophiacodontia . . . . .		674
Family Ophiacodontidae . . . . .		675
Family Eothyrididae . . . . .		676
Suborder Sphenacodontia . . . . .		676
Family Varanopsidae . . . . .		677
Family Sphenacodontidae . . . . .		678
Subfamily Haptodontinae . . . . .		678
Subfamily Secodontosaurinae . . . . .		679
Subfamily Sphenacodontinae . . . . .		679
Suborder Edaphosauria . . . . .		679
Family Nitosauridae . . . . .		680
Family Lupeosauridae . . . . .		681
Family Edaphosauridae . . . . .		681
Family Caseidae . . . . .		681
Order Therapsida . . . . .		682
Suborder Theriodontia . . . . .		684
Infraorder Titanosuchia . . . . .		685
Family Brithopodidae . . . . .		686
Family Anteosauridae . . . . .		686
Family Jonkeriidae . . . . .		686
Infraorder Gorgonopsia . . . . .		687
Family Phthinosuchidae . . . . .		688
Family Galesuchidae . . . . .		688
Family Pachyrhinidae . . . . .		688
Family Hipposauridae . . . . .		689
Family Cynariopsidae . . . . .		689
Family Rubidgeidae . . . . .		689
Family Gorgonopsidae . . . . .		689
Family Scymnognathidae . . . . .		689
Family Aelurosauridae . . . . .		689
Family Galerhinidae . . . . .		690
Family Gorgonognathidae . . . . .		690
Family Arctognathoididae . . . . .		690
Family Scylacopsidae . . . . .		690
Family Sycosauridae . . . . .		690
Family Arctognathidae . . . . .		690
Family Aelurosauropsidae . . . . .		690
Family Scylacocephalidae . . . . .		691
Family Broomisauridae . . . . .		691
