FOREWORD

This publication summarizes the experiences of members of the Committee on Programs for Prevention of Mosquito-Borne Encephalitis from 1975-1978, during and following the 1975 epidemic of St. Louis encephalitis (SLE).

As principal editor of this publication I wish to express my thanks and appreciation to those who entrusted me with this task and to acknowledge the efforts of those who helped to make it possible.

I am grateful to Drs. Barbara Blake, Chairperson of the Committee, E.W.R. Best (Co-Chairman), R. Andreychuk (Secretary), L. Spence and J.M. Joshua (Co-Editors), and to members of the Committee for their support, interest and cooperation throughout the preparation of this publication.

The encouragement and the stimulating discussions with Dr. A.J. Rhodes, during his tenure as Medical Director and then Research Coordinator of our Branch, have been invaluable to me in bringing together the contributions in this publication.

To have the experiences by members of the Committee summarized in this publication is the brain-child of Mr. H.B. Smith, Director of the Central Laboratories. He proposed the idea to members of the Committee who in turn gave it their full support.

The 1975 epidemic of SLE was the starting point of this endeavour. The contributions of my colleague, Dr. T.P. Subrahmanyam, in investigating the outbreak is thankfully acknowledged.

I am grateful to Drs. Spence and Joshua for their views, support and help in reviewing the manuscripts. We are thankful to the contributors for sharing their experiences and for their time and efforts to the production of this publication.

Thanks are due to Mr. W. Vander Kolk for his artistic design of the covers and the title page, to Mrs. Sheila Johnston for her help in arranging the typing, to Mr. B. Vandenburg for his suggestions and cooperation in the printing and reproduction of this publication and to Mrs. Kathleen Tranter for her careful and patient typing services.

M.S. Mahdy
