*(1986)*

The logo of these Proceedings is an interferogram of natural convection flow around two horizontal cylinders held one above the other. It was taken by R. B. Goldstein in the Heat Transfer Laboratory of the University of Minnesota.

The Eighth International Heat Transfer Conference was held in San Francisco, California USA, August 17-22, 1986. The conference was organized under the authority of the Assembly for International Heat Transfer Conferences, in cooperation with the International Scientific Committee, the U.S. Scientific Committee, The American Society of Mechanical Engineers, and The American Institute of Chemical Engineering.

In order to make these volumes available as economically and as rapidly as possible, the authors' typescripts have been reproduced in their original form.

# Preface

These six volumes contain the invited and general papers presented at the Eighth International Heat Transfer Conference. The papers consist of 2 plenary lectures, 28 keynote lectures and 450 general presentations.

As indicated in the first plenary lecture by Dr. E. R. G. Eckert, the series of International Heat Transfer Conferences started in London (1951) as an International Discussion on Heat Transfer. The general conference format was established in the Second Conference in Boulder, Colorado (1961). The regular four-year cycle of the Conferences began at the Third Conference in Chicago (1966). The Conference immediately became the major event of the international heat transfer community, with ever increasing participation of heat transfer engineers and scholars from all over the world as manifested in the subsequent Conferences in Versailles (1970), Tokyo (1974), Toronto (1978), and Munich (1982).

The Eighth International Heat Transfer Con-

ference has again received most enthusiastic responses from the international community, reflecting a continuing state of growth and vitality. In many countries, the number of good-quality papers offered for presentation far exceeded the allocation, thus making the selection a most difficult task. For this, we owe special thanks to the members of the International Scientific Committee and their national editors and reviewers. We are also grateful to the other members of the U.S. Scientific Committee who have labored long and hard on the Conference Scientific Program. The strong support of the Conference Executive Committee under Chairman R. J. Goldstein for the Scientific Program and its publication is essential and very much appreciated.

Chang-Lin Tien

Van P. Carey

James K. Ferrell

# Nomenclature

Symbol	Quantity	SI Unit
A (or S)	area, cross section	m <sup>2</sup>
a	thermal diffusivity	m <sup>2</sup> /s
a <sub>t</sub>	turbulent (eddy) thermal diffusivity	m <sup>2</sup> /s
C	heat capacity	J/K
C <sub>B</sub>	molecular concentration of component B	mol/m <sup>3</sup>
C <sub>D</sub> (or $\xi$ )	drag coefficient	—
c	specific heat capacity	J/(K kg)
c <sub>p</sub>	specific heat capacity at constant pressure	J/(K kg)
c <sub>v</sub>	specific	
D	diffusion coefficient	m <sup>2</sup> /s
d (or D)	diameter	m
d <sub>e</sub>	equivalent (hydraulic) diameter	m
E	energy	J
E <sub>r</sub>	irradiance	W/m <sup>2</sup>
F	force	N
f	friction factor	—
G	weight	N
g	local gravitational acceleration, (standard acceleration, $g_0 = 9.80665 \text{ m/s}^2$ )	m/s <sup>2</sup>
H (or I)	enthalpy	J
h (or i)	specific enthalpy	J/kg
h	height	m
h (or $\alpha$ )	heat transfer coefficient	W/(m <sup>2</sup> K)
$\Delta h_v$	specific latent heat of vaporization	J/kg
$\Delta h_s$	specific latent heat of solidification	J/kg
K	equilibrium constant	--
k (or U)	overall heat transfer coefficient	W/(K m <sup>2</sup> )

Symbol	Quantity	SI Unit
$k$ (or $\lambda$ )	thermal conductivity	$\text{W}/(\text{m K})$
$L$	length	$\text{m}$
$m$	mass	$\text{kg}$
$m$	mass flow rate	$\text{kg/s}$
$M$	molar mass	$\text{kg/mol}$
$n$	amount of substance	$\text{mol}$
$P$	power	$\text{W}$
$P$	pressure	$\text{N/m}^2$
$Q$	quantity of heat	$\text{J}$
$Q$ (or $\phi$ )	heat flow rate	$\text{W}$
$q$ (or $\phi_h$ )	heat flux density	$\text{W/m}^2$
$R$	universal gas constant, $R = 8.3144 \text{ J/(mol K)}$	$\text{J}/(\text{mol K})$
$R_i$	individual (specific) gas constant	$\text{J}/(\text{kg K})$
$r$	radius	$\text{m}$
$S$	entropy	$\text{J/K}$
$S$ (or $A$ )	cross section	$\text{m}^2$
$s$	specific entropy	$\text{J}/(\text{kg K})$
$T$	thermodynamic temperature	$\text{K}$
$t$	time	$\text{s}$
$U$ (or $k$ )	overall heat transfer coefficient	$\text{W/m}^2\text{K}$
$V$	volume	$\text{m}^3$
$V_m$	molar volume	$\text{m}^3/\text{mol}$
$v$	specific volume	$\text{m}^3/\text{kg}$
$W$	work	$\text{J}$
$x$	quality	—

#### Greek Letters

$\alpha$ (or $h$ )	heat transfer coefficient	$\text{W}/(\text{m}^2\text{K})$
$\alpha_r$	absorptance for radiation	—
$\alpha, \beta, \gamma$	plane angles	$\text{rad}$
$\beta$	mass transfer coefficient	$\text{m/s}$
$\gamma$ (or $\beta_T$ )	cubic (volumetric) expansion coefficient	$\text{K}^{-1}$
$\delta$ (or $d$ )	thickness	$\text{m}$
$\epsilon$	emissivity	—
$\epsilon$ (or $\psi$ )	void fraction	—

Symbol	Quantity	SI Unit
<i>Greek Letters (Continued)</i>		
$\zeta$ (or $C_D$ )	drag coefficient	—
$\eta$ (or $\mu$ )	dynamic viscosity	kg/(sm)
$v$	Celsius temperature	°C
$\lambda$ (or $k$ )	thermal conductivity	W/(m K)
$\lambda_t$	turbulent thermal conductivity	W/(m K)
$\mu$ (or $\eta$ )	dynamic viscosity	kg/(s m)
$\mu$	chemical potential	J/kg
$\nu$	kinematic viscosity	m <sup>2</sup> /s
$\nu_t$	turbulent kinetic viscosity (eddy diffusivity for momentum)	m <sup>2</sup> /s
$\rho$	mass density	kg/m <sup>3</sup>
$\rho_r$	reflectance	—
$\rho_B$	mass concentration of substance B	kg/m <sup>3</sup>
$\rho_l$	density of liquid	kg/m <sup>3</sup>
$\rho_v$	density of vapor	kg/m <sup>3</sup>
$\sigma$	Stefan-Boltzmann constant	W/(k <sup>4</sup> m <sup>2</sup> )
$\sigma$	surface tension	W/m
$\tau_r$	transmittance	—
$\tau_s$	shear stress	N/m <sup>2</sup>
$\phi$ (or $Q$ )	heat flow rate	W
$\phi_n$ (or $q$ )	heat flux density	W/m <sup>2</sup>
$\phi_m$	mass flux density	kg/(s m <sup>2</sup> )
$\psi$	relative humidity	—
$\psi$ (or $\epsilon$ )	void fraction	—
$\Omega$	solid angle	sr
<i>Coordinates</i>		
x,y,z	cartesian coordinates	
r,φ,z	cylindrical coordinates	
r,φ,ψ	spherical coordinates	

Symbol and Definition	Name

A. Soufiani and J. Taine	
<b>Conjugated heat transfer of a radiatively participating gas in a channel</b>	797
M. Kassemi and B. T. F. Chung	
<b>Heat transfer for flow of an absorbing, emitting, and isotropically scattering medium through a tube with reflecting walls</b>	803
Theodore F. Smith, Ki-Hong Byun, and Martha J. Ford	
<b>Combined radiative and conductive transient heat transfer between a wall and a fluidized bed</b>	809
G. Flamant	
<b>An assessment of spectral radiative heat transfer predictions for a pulverized coal-fired furnace</b>	815
M. P. Mengüç and R. Viskanta	
<b>Radiative heat transfer calculation for pulverized coal combustion application of Lorenz-Mie theory</b>	821
D. Grouset and D. Rebuffat	
<b>Analytical and experimental studies on radiative propagation in porous media with internal heat generation</b>	827
R. Echigo, Y. Yoshizawa, K. Hanamura, and T. Tomimura	
<b>The effect of thermal radiation on the propagation of laminar flames</b>	833
W. W. Yuen and S. H. Zhu	
<b>Flame propagation in a closed tube</b>	843
K. N. Tennankore and J. F. Lafontaine	
<b>Steady propagation of an opposed-wind diffusion flame on a charring solid</b>	849
Arvind Atreya	
<b>Laser ignition of bulk 1018 carbon steel in pure oxygen</b>	857
K. Nguyen and M. C. Branch	
<b>A study of the combustion and agglomeration of coal slurry fuel</b>	863
Lawrence A. Kennedy and L. K. Hwang

### VOLUME 3

---

#### **INTERNAL FORCED CONVECTION**

<b>A generalized closed-form solution to laminar thermal entrance problems</b>	871
R. Lakshminarayanan and A. Haji-Sheikh	
<b>Simultaneously developing flow and heat transfer in the entrance region of elliptical ducts</b>	877
C. W. Rapley, R. Stainsby, and A. I. C. Webb	
<b>Solutions to the combined entrance region in a circular tube</b>	883
J. X. Ling and A. Dybbs	
<b>Momentum and heat transfer in the entrance region of a circular pipe with oblique inlet of air</b>	889
M. Jícha and V. Enenkl
