Preface

The Paris symposia in urologic cancer sites, held annually since 1979, provided a unique tradition of disseminating information and fostering communication between experts, and of prompt publication of the data for all who are practicing the art of cancer patient care. Advances in fundamental biology can be and frequently are translated rapidly into clinical situations. In no other area is there a better example than that of urologic oncology—not only in Europe but worldwide. Knowledge of the cancer cell and its fundamental developments has been considered in the past at various symposia as it affects prostate cancer, bladder cancer, renal cancer, and testis cancer. Evaluations of clinical trials that are not yet published have been included in the past and in these *Proceedings of the International Symposium on Therapeutic Progress in Urological Cancers*, held in Paris, June 29–July 1, 1988.

The emphasis in these publications has been on providing current and essential material in presentations by international experts, usually from over 20 countries. As in the past, it is our goal to disseminate this information as rapidly as possible. We hope these proceedings reflect that spirit and our goal to continue in this fashion for the future.

This symposium addresses new aspects of the clinical management of all urologic cancer sites concurrently with an emphasis on originality, uniqueness, immediate applicability, and precise areas of current vital interest to clinicians and scientists of all backgrounds who are concerned with the cancer problem. This publication reflects our efforts to share the expertise, the dedication, and the unique and vital information developed by the participants in the International Symposium on Therapeutic Progress in Urological Cancers.

Dr. F.K. Mostofi

Dedication

Dr. F.K. Mostofi has been honored many times for his unique contributions to the field of pathology not only in the United States but worldwide. He has, for example, been recognized by the International Academy of Pathology with the establishment in 1977 of the F.K. Mostofi Distinguished Service Award, presented annually, for significant contributions to the progress of pathology. His range of honors is vast, encompassing those from societies of national and international consequence to those from heads of states and governments, including the President of the United States. Throughout his career, this wonderful colleague—recognized on sight by his fellow pathologists and known to all as “Kash”—has remained the same: a standard of excellence, a compassionate, concerned individual devoted to education and communication in medicine. As a humanist, Dr. Mostofi has recognized the needs of those around the world afflicted with cancer—especially many in some circumstances who are unable to help themselves.

He has frequently acknowledged the profound and considerable support he has enjoyed from his family, especially his wonderful wife, Dottie, and his son, Keith. Dottie's support was of especial value in the early years, when his responsibilities frequently kept him away from home.

Dr. Mostofi's beginnings in the United States occurred at the University of Nebraska where he received a Bachelor of Science and an A.B. degree,

and an achievement score that qualified him for admission to the Harvard Medical School. Following his graduation from Harvard, Dr. Mostofi spent his intern year, 1939–1940, at St. Luke's Hospital in Bethlehem, Pennsylvania. This was indeed a fortunate choice for it was here that he and Dottie met and married. He returned to Boston in 1940 for his training in pathology—a very fruitful and significant period not only personally but for others—particularly those of us present here in Paris this evening, 30 June 1988, to acknowledge his contributions to the field of urologic pathology and his service through the Armed Forces Institute of Pathology, the Genitourinary Registry of the American Urological Association, the World Health Organization, the International Union Against Cancer (UICC), the International Pathology Academy, and to the National Cancer Advisory Board of the United States, and numerous other commitments. The national and international sponsoring organizations of this particular meeting are expressing through this dedication their sincere appreciation for the numerous achievements Dr. Mostofi has made. Urologists in particular have benefitted from his efforts in the classification and organization for staging and histopathology—be it bladder cancer, testis cancer, or one of the other urological malignancies which are unfortunately still significant throughout the world today.

As an original founding member of the National Prostatic Cancer Project and in other affiliations including the American Task Force of the Joint Committee on Clinical Stage Classification, and the TNM group of the UICC, Dr. Mostofi has maintained a persistent presence for benefit in this changing world of improvements, developments, and the needs for essential communication whilst all the more sustaining standards and expressing concerns for minimal data that can be useful in developing countries. There can be no other single individual more qualified for this acknowledgment than Dr. Mostofi. We are so pleased that such can be accomplished by the international urologic community attending this meeting in the presence of his family members and by others to express in a small way our additional thanks to you, Dr. Mostofi, for all that you have done, are doing, and will continue to do for many years to come.

Professor Gerald P. Murphy
