Cultural Landscapes of South Asia

The pluralism of South Asia belies any singular reading of its heritage. In spite of this diversity, its cultural traditions retain certain attributes that are, at their core, South Asian – not only in their capacity to self-organize and enact, but in their ability to reinvent cultural memories and retain an intimate connection with nature and landscape.

This volume focuses on the notion of cultural landscape as a medium integrating multiple forms of heritage, and points to a new paradigm for conservation practices in the South Asian context. Even though the construct of cultural landscape has been accepted as a category of heritage, its potent use in heritage management in general and within the South Asian context in particular has not been widely studied. The volume challenges the prevalent views of heritage management in South Asia that are entrenched in colonial legacies and contemporary global policy frameworks.

Kapila D. Silva is an Associate Professor of Architecture at the University of Kansas, USA.

Amita Sinha is a Professor of Landscape Architecture at the University of Illinois at Urbana-Champaign, USA.

Routledge Research in Landscape and Environmental Design

Series editor: Terry Clements

Associate Professor, Virginia Tech

Routledge Research in Landscape and Environmental Design is series of academic monographs for scholars working in these disciplines and the overlaps between them. Building on Routledge's history of academic rigour and cutting-edge research, the series contributes to the rapidly expanding literature in all areas of landscape and environmental design.

Notes on contributors

Manish Chalana is an Associate Professor in the Department of Urban Design and Planning at the University of Washington, with adjunct appointments in Architecture and Landscape Architecture in the College of Built Environments and in South Asia Studies in the Jackson School of International Studies. His work focuses on historic preservation planning, planning history, and international planning and development. His work has appeared in journals ranging from *Journal of Architectural Education*, *Journal of Heritage Stewardship*, *Planning Perspectives*, *Journal of Planning History* and *Journal of American Planning Association*. He is currently developing a book-length manuscript on historic preservation planning in India.

Neel Kamal Chapagain designed and leads the newly launched master's degree programme in Heritage Management at the Ahmedabad University, India. He previously taught at the University of Wisconsin-Stevens Point, USA. He has a Ph.D. from the University of Wisconsin-Milwaukee, USA, and a professional doctorate degree in Architecture from the University of Hawaii, USA. He coordinates the publication of a book series titled *Reflections on the Built Environment and Associated Practices* for the Tribhuvan University – Institute of Engineering, Nepal, from where he received a B.Arch. degree. He is the co-editor of *Asian Heritage Management: Contexts, Concerns and Prospects* (Routledge, 2013).

Nilan Cooray currently serves as the International Conservation Specialist in conserving prime heritage sites in Bangladesh, funded by the Asian Development Bank. He also serves as the Assistant Secretary General of the National Trust-Sri Lanka. He has a doctorate from the Delft University of Technology, the Netherlands, and received undergraduate and postgraduate training in both architecture and conservation from the University of Moratuwa, Sri Lanka. He has nearly 25 years of experience in managing and conserving cultural heritage in various capacities in Sri Lanka and abroad. He has carried out a number of assignments as a UNESCO consultant / ICOMOS expert in Nepal, Bangladesh and Myanmar.

Farhana Ferdous is a Lecturer at the School of Architecture, Design and Planning at the University of Kansas, USA. She has a doctorate from the University of Sydney, Australia, and architectural training from the Bangladesh University of Engineering and Technology. She is the co-editor of the forthcoming book *The Routledge Companion to Architecture and Social Engagement*, which critically discusses how built environments could be rearticulated to bring broader community well-being. Her research has been supported by American Association of University Women, Grant-makers in Aging, Endeavour Postgraduate Awards and numerous scholarships from the Bangladesh Government.

Sharif Shams Imon is an architect and an urban planner. He has a Ph.D. in Urban Conservation and has taught in Bangladesh, Hong Kong and Macao. He is currently teaching heritage management as an Assistant Professor at the Institute for Tourism Studies, Macao. He has worked as a UNESCO consultant in various projects, carried out World Heritage missions on behalf of ICOMOS and UNESCO, and has led UNESCO and ICCROM training programmes for professionals in South and Southeast Asia. His research and publication focus on issues related to heritage management, cultural tourism and urbanism.

Farhan Karim is an Assistant Professor in the School of Architecture, Design, and Planning at the University of Kansas. He received a Ph.D. from the University of Sydney, Australia. His first book, *Modernism of Austerity: Formation and Display of Ideal Home in India, 1920–1960*, is forthcoming in 2017 from the University of Pittsburgh Press. He is co-editing a volume titled *The Routledge Companion to Architecture and Social Engagement*. His current research focuses on the involvement of Euro-American architects in the development of modern architecture in post-colonial Pakistan (1947–71). His research has been supported by the Graham Foundation, Canadian Centre for Architecture, Aga Khan Center for Muslim Architecture at MIT, Australian Leadership Award, and various research funds from the University of Kansas.

Rahul Mehrotra is a practicing architect and educator. He works in Mumbai and teaches at the Graduate School of Design at Harvard University, where he is Professor of Urban Design as well as a member of the steering committee of Harvard's South Asia Initiative. His practice, RMA Architects (<http://www.RMAarchitects.com>), founded in 1990, has executed a range of projects across India. These diverse projects have engaged many issues, multiple constituencies and varying scales, from interior design and architecture to urban design, conservation and planning. He has written, co-authored and edited a vast repertoire of books on Mumbai, its urban history, historic buildings, public spaces and planning processes.

Anila Naeem is a Professor and Co-chairperson at the Architecture and Planning Department, N.E.D. University in Karachi, Pakistan. She has graduate degrees from Dawood College of Engineering and Technology, Karachi and the Middle East Technical University, Turkey, and a doctorate from Oxford Brookes University, UK. She is presently the Secretary General – ICOMOS Pakistan and a member of the Heritage Advisory Committee, Sindh Government.

Debashish Nayak is the Founder-Director of the Centre for Heritage Management of the Ahmedabad University. An architect with more than two decades of experience in managing urban conservation issues of historic cities in India and abroad, he has been an advisor since 1996 to the heritage programmes in municipal corporations of various Indian cities, including Ahmedabad; the Indian Heritage Cities Network launched by UNESCO; and the Gujarat State Project Coordinator for National Mission on Monuments and Antiquities. He has also been a member of the National Committee on Conservation Policy, Archaeological Survey of India. He is the recipient of the Ashoka Fellowship (1990–93); Salzburg Fellow (1990); Ten Outstanding Young Indians Award (1994 and 1995); Friends of the United Nations Citizen's Award at New York, Anubhai Chimanlal–AMA Nagrikta Puraskar – Citizenship Award (for his contribution in Ahmedabad); and the Lifetime Achievement Award by the governor of West Bengal, India.

Françoise Pommaret is a cultural anthropologist; Director of Research at the National Centre for Scientific Research, France; and Adjunct Professor at the Institute of Language and Culture, Royal University of Bhutan. She has been associated with Bhutan in different capacities since 1979 and has published numerous scholarly articles and books on different aspects of Bhutanese culture. She is currently involved in the documentation of the Bhutan Cultural Atlas (<http://www.bhutanculturalatlas.org>) and is working on the interface between deities, local powers and migrations in Bhutan. She is the co-editor and co-author of *Bhutan: Mountain Fortress of the Gods* (Serindia, London, 1997) and of *Bhutan: Tradition and Change* (Brill, Leiden, 2007). She is the author of *Bhutan, A Cultural Guidebook* (Odyssey Guidebook, Hong Kong, 1990, reprint 2003, 2006, 2010) and of *Tibet, An Enduring Civilization* (Abrams Discovery Series, New York, 2003). In 2015, she was honoured with the highest French award, the Légion d'Honneur, for her lifelong contribution to the relations between Bhutan and France.

Nubras Samayeen has worked in various architecture and planning organizations in New York, Washington, DC, and Dhaka, Bangladesh. She was also an Assistant Professor in the School of Architecture and Design at Howard University in Washington, DC, and on the faculty of the New Jersey Scholars Program. She has a bachelor's degree in Architecture from

Bangladesh University of Engineering and Technology and dual master's degrees in architecture and urban design from the University of Michigan at Ann Arbor, USA. She is currently pursuing a doctoral degree in the joint programme in Architecture and Landscape Architecture with a minor in Heritage Conservation at the University of Illinois at Urbana-Champaign, USA.

Jyoti Pandey Sharma is a Professor of Architecture at the Deenbandhu Chhotu Ram University of Science and Technology in Murthal, Haryana, India. She engages with issues of built heritage and cultural landscapes, notably those concerning the Indian subcontinent's legacy of Islamic and colonial urbanism, and she is widely published.

Kapila D. Silva is an Associate Professor at the School of Architecture, Design and Planning of the University of Kansas, USA. He has taught at the University of Wisconsin-Milwaukee, USA, from which he received a doctorate in architecture, and at the University of Moratuwa in Sri Lanka, where he received professional training in architecture. He is the lead editor of *Asian Heritage Management: Contexts, Concerns and Prospects* (Routledge, 2013).

Amita Sinha is a Professor in the Department of Landscape Architecture and the Center for South Asian and Middle Eastern Studies at the University of Illinois at Urbana-Champaign, USA. She is the author of *Landscapes in India: Forms and Meanings* (University Press of Colorado, 2006, reprint by Asia Educational Services 2011), and has edited *Landscape Perception: Readings in Environmental Psychology* (Academic Press, 1995) and *Delhi's Natural Heritage* (USIEF and INTACH, 2009). She has coordinated projects on the planning and designing of many heritage landscapes including the Taj Mahal in Agra, Champaner-Pavagadh in Gujarat, Govardhan in Braj, Amber in Rajasthan, Orchha in Madhya Pradesh and the Ghats of Varanasi.

Wantanee Suntikul earned her Masters and Ph.D. in Tourism Studies from the University of Surrey, UK. She is an Assistant Professor at the School of Hotel and Tourism Management of the Hong Kong Polytechnic University. Her core research interests and expertise are in the impact of tourism on cultural heritage tourism destinations and the political and social aspects of tourism development, focusing more specifically on South and Southeast Asia. She has co-edited two books with Richard Butler: *Tourism and Political Change* (Goodfellow, 2010) and *Tourism and War* (Routledge, 2012). She is also joint editor-in-chief of the journal *Tourism, Culture & Communication*.

Acknowledgements

The editors would like to thank many colleagues who have directly or indirectly contributed to the idea to compile a volume discussing heritage issues in the South Asian context. Two symposia panels that we organized in 2010 and 2012 served as impetus from which some of the key ideas and the chapters emerged. We are happy to have our colleagues from those symposia included here as contributors.

Thanks are due to Terry Clements, Louise Fox and Sadé Lee at Routledge for their great advice, support and patience during the preparation of this volume. We appreciate the critical feedback from the two anonymous reviewers of our proposal. Thanks are also due to Kevin Sloan, an architecture student at the University of Kansas, for preparing several illustrations; and to Neha Rajora, graduate student at the University of Illinois at Urbana-Champaign, for her research assistance. Finally, we are thankful to all our contributing authors, without whom the idea of this book would never have materialized. We hope that we will have opportunities to collaborate on other exciting and thoughtful projects in future.

Prologue

Imagining the future of conservation in South Asia

Rahul Mehrotra

The roots and norms of architectural conservation practices in South Asia generally lie in the Western canons of conservation practice. However, in South Asia in the practice of building, it is not easy to distinguish between conservation, preservation, restoration, reconstruction and contemporary formulations. The obvious reason is that the living craft traditions in South Asia facilitate repair, preservation and reconstruction as easily and perhaps as authentically as norms might demand. In fact the coexistence of many times – where skills, practices, approaches and values from different centuries are simultaneously alive – is an aspect that a conservation practitioner in South Asia cannot escape.

Thus the continuous nature of use and the notion of cultural traditions evolving into each other over time most often blur the distinctions that are otherwise made in Western traditions defined by specific time periods. In this respect, the South Asian examples relate much more relevantly to situations implied by the *Nara Document on Authenticity* (1994), where conservation professionals from around the world questioned some of the assumptions about authenticity found in earlier international charters. Its follow-up discussions emphasized developing greater understanding of the values represented by the cultural properties themselves, as well as respecting the role such monuments and sites play in contemporary society – suggesting that significance evolves.

This idea of ‘evolving significance’ takes on a critical dimension when contemplating the preservation of the built environment in South Asia or the creation of new artefacts. The question then becomes, how does the designer or conservationist grapple with significance or meaning? In fact, this notion of ‘cultural significance’ is something that emerged clearly in the conservation debate in the 1980s – in the *Burra Charter*, to be specific. But it is a definition that is ‘object’ centric (devoid of life) with its roots perhaps in the debate propagated by the antiquarians of the Renaissance. The interesting question is how one deals with this idea or notion in a highly pluralistic society where hybridity is on the move and where cultural memory is often an enacted process, or where meanings are not stable and in fact fluid.

It is here, that accepting that ‘cultural significance’ *evolves*, it is something fluid and ever changing, will truly clarify the role of the architect and

the conservationist as also an advocate of change (versus one who opposes change) – one who can engage with both these conditions on equal terms and blur the obvious binaries to perhaps create hybrid options that encompass the simultaneous validity of both. The architect as conservationist would then slip back and forth between the role of a planner, the role of a conservationist in the pure sense and of a designer who can see the possibilities in the way spaces can be used and therefore reinterpreted. This is critical for a grounded engagement with the practice of conservation in South Asia as well as societies and regions in flux across the globe.

Instead, unfortunately, most conservation debates discuss change in terms of the loss of something as opposed to new possibilities, because people (especially the propagators and patrons of conservation effort) will easily react to any sort of new condition as worse than some ‘magic moment’ in the past. Conservation professionals then easily develop a rationale to describe that sense of loss. However, in the context of our contemporary urban state, the issue is how to actually simultaneously identify new typologies and work with them rather than to dwell too dominantly in the ‘postcard city’ – a condition that only flights of nostalgia momentarily recreate! It is this shift that is crucial for both the practice of conservation as well in the education of practitioners for South Asia.

In the former case, a conservation practitioner or activist would be seen as an advocate not only of retention of what survives from the past, but also as one who gives expression to contemporary aspirations. Naturally, this crucial shift must occur first in the education of the conservation practitioner. If this shift occurs – where the disciplines of architecture, landscape architecture and urban design once again blur – then new conservation architects would work more positively with wonderful, kaleidoscopic, constantly evolving conditions, where new futures are imagined and the past informs these futures. It is perhaps the only way to evolve a sustainable conservation strategy in the world today.

It is in this context that this book, *Cultural Landscapes of South Asia: Studies in Heritage Conservation and Management*, will be a timely and seminal addition to the literature on conservation not only globally but more crucially for education and practice in South Asia. The collection of chapters that broadens this discussion in terms of the question of cultural landscapes and the conservation of historic urban centres by default sets the extreme condition to test the business as usual norms of conservation. Furthermore, to be situated in South Asia takes these complexities to another extreme. It is from these extremes that often the most robust theoretical frames are established. This is the potential of this book for the conservation debate more generally.

The critical concern for conservation theory is that when we don’t have a vision for the locality on which we are operating, we are restricted to operating in the sphere of nostalgia. Or put another way, in ‘reclaiming the past’ our theories are constructed around the assumption that our city and cultural

landscapes are static and stable entities, and that architecture is the only mechanism by which memory is codified. Of course there are discussions about intangible heritage and so forth, but how these ideas intersect with our ability to spatially imagine the preservation of these environments is critical.

This volume addresses this question in the most direct terms and will serve as a robust framework for future directions in engaging with the new emerging landscapes of South Asia – in our cities and historic sites and also the larger hinterlands of heritage landscapes. It is in this broad frame of imagination that the conservation professional in South Asia will be able to engage strategically. That is, constructively intervening and facilitating the creation and preservation of urban and cultural landscapes where new futures will evolve gently from the legacy of the omnipresent past in South Asia.
