Contents

<i>Chapter 1. Introduction to zonal centrifugation</i>	<i>8</i>
1.1. The first applications of centrifugation in biology	8
1.2. Centrifugal techniques	9
1.2.1. *Analytical ultracentrifugation	9
1.2.2. Differential pelleting	11
1.2.3. Rate-zonal centrifugation	13
1.2.4. Isopycnic zonal centrifugation	15
1.3. The development of centrifuges and rotors	16
1.3.1. The centrifuge	16
1.3.2. Rotor materials	18
1.3.3. Rotor shape	19
1.3.4. Zonal rotors	20
1.4. Uses and limitations of centrifugal techniques	24
1.5. Design of a centrifuge laboratory	27
1.6. Safety of centrifuges	29
1.6.1. Causes and prevention of rotor failure	29
1.6.1.1. Overspeeding	30
1.6.1.2. Corrosion	32
1.6.1.3. Fatigue	32
1.6.1.4. High gradient densities	33
1.6.1.5. Vacuum failure	33
1.6.1.6. Freezing of rotor contents	33
1.6.2. Other precautions in operation of centrifuges	34
1.6.2.1. Access to spinning rotor	34
1.6.2.2. Aerosol formation	34
1.6.2.3. Electrical safety	35
1.6.2.4. Balancing and assembly of rotors	35
1.6.2.5. Compatibility of centrifuge and rotor	35
1.6.2.6. Water leaks	35
1.6.2.7. Flammable solvents	36

1.7. Care of rotors	36
1.7.1. Choice of rotor	36
1.7.2. Properties and care of materials used in rotor construction	36
1.7.3. Washing and drying rotors	40
1.7.4. Assembly, disassembly and storage	41
1.7.5. Care of individual rotors	41
1.8. Guarantees on rotors	43

Chapter 2. Theoretical aspects of centrifugal separations 46

2.1. Theory of rate-zonal separations	46
2.1.1. Theory of sedimenting particles	47
2.1.2. Stability of the sample zone	51
2.1.3. Stability of a sedimenting zone	57
2.2. Theory of isopycnic banding	59
2.2.1. Shape of zones separated by isopycnic banding	59
2.2.2. Redistribution of density gradient solutes in a centrifugal field	60
2.2.3. Influence of the rotor on gradient shape	64
2.3. Effects of density gradient solutes on subcellular structures	64

Chapter 3. Conditions for a centrifugal separation 70

3.1. Choice of approach	70
3.2. Choice of rotor	75
3.3. Density gradient solutes	79
3.3.1. Salts of alkali metals	80
3.3.2. Small hydrophilic organic molecules	81
3.3.3. High molecular weight organic compounds	86
3.3.4. Other types of density gradient solutes	87
3.3.5. Choice of gradient material	89
3.4. Choice of gradient	90
3.4.1. Gradient for rate-zonal separations	90
3.4.2. Gradient for isopycnic separations	91
3.4.3. Design of complex gradients	93

Chapter 4. Centrifugation in conventional rotors 97

4.1. Rate-zonal centrifugation	97
4.1.1. Preparation of the density gradient	97

4.1.2. Layering of sample on to the gradient	103
4.1.3. Centrifugation	105
4.1.4. Recovery from the gradient	108
4.1.5. Monitoring the displaced gradient	112
4.2. Isopycnic zonal centrifugation	115
4.2.1. Preparation of the density gradient	115
4.2.2. Layering of sample on to the gradient	117
4.2.3. Centrifugation	118
4.2.4. Displacement and monitoring of the gradient	118

Chapter 5. Centrifugation in zonal rotors 120

5.1. Conventional, non-reorienting zonal rotors	122
5.1.1. Construction of rotors	122
5.1.2. Types of zonal rotors	130
5.1.2.1. A-XII rotor	130
5.1.2.2. Z-15 rotor	134
5.1.2.3. HS rotor	134
5.1.2.4. B-IV rotor	135
5.1.2.5. B-XIV and B-XV rotors	136
5.1.2.6. B-XXIX and B-XXX rotors	139
5.1.2.7. Interchangeable batch and continuous-flow rotors	140
5.1.2.8. Continuous-flow rotors	141
5.1.2.9. Other rotors	142
5.1.3. Operation of zonal rotors	143
5.1.3.1. Preparations for a run	144
5.1.3.2. Gradient loading	153
5.1.3.3. Sample loading	156
5.1.3.4. Acceleration spin and deceleration	163
5.1.3.5. Unloading	168
5.1.3.6. Monitoring and fraction collecting	174
5.1.4. Ancillary equipment	180
5.1.4.1. Gradient makers	180
5.1.4.2. Pumps	182
5.1.4.3. Refractometers and density meters	183
5.1.4.4. Spectrophotometers, colorimeters and UV meters	185
5.1.4.5. Flow-through cells	185
5.1.4.6. Thermometers	186
5.1.4.7. Perfusion pumps	186
5.1.4.8. Stroboscopic lamps	186
5.1.4.9. Recorders	186

5.1.4.10. Cooling equipment	187
5.1.4.11. Minor accessories	187
5.1.4.12. Fraction collectors	188
5.1.4.13. Integrator	189
5.2. Reorienting zonal rotors	189

Chapter 6. Assay of fractions separated by density gradient centrifugation 197

6.1. Enzyme and chemical assays on fractions	197
6.2. Electron microscopic examination of fractions	198
6.3. Assessment of results from density gradient separations	200
6.4. Calculation of sedimentation coefficients	202

Chapter 7. Applications of density gradient centrifugation 205

7.1. Separation of living cells	205
7.2. Separation of cell organelles from mammalian tissues	208
7.2.1. Subfractionation of a crude nuclear fraction and separation of large sheets of plasma membranes	210
7.2.1.1. Subfractionation of purified nuclei	211
7.2.2. Subfractionation of the mitochondrial fraction	212
7.2.3. Subfractionation of the lysosomal fraction	214
7.2.4. Subfractionation of microsomes	217
7.2.5. Fractionation of ribonucleoprotein particles	222
7.2.6. Fractionation of chromatin	225
7.3. Separation of subcellular structures from plant cells	226
7.4. Separation of subcellular structures from unicellular organisms	229
7.5. Fractionation of macromolecules	232
7.5.1. Nucleic acids	232
7.5.2. Proteins	235
7.6. Other applications of density gradient centrifugation in biochemistry	237
7.6.1. Fractionation of serum lipoproteins	237
7.6.2. Separation of viruses	239
7.7. Other applications of density gradient centrifugation	242

Chapter 8. Artifacts arising during centrifugal separations . . . 243

8.1. Damage to particles during centrifugation	243
8.1.1. Damage caused by pelleting	244
8.1.2. Damage due to high hydrostatic pressure	245
8.1.3. Damage due to high concentration of the gradient solute	245
8.2. Factors affecting the accuracy of assays performed on fractions from density gradients	246
8.2.1. Reaction of the gradient solute with reagents used in the assay of separated constituents	247
8.2.2. Interference with the performance of analytical equipment	248
8.2.3. Interference in the sensitivity of assays	249
8.3. Uncertainties in estimates of particle density and sedimentation coefficient	250
8.3.1. Particle density	250
8.3.2. Sedimentation coefficient	251

Chapter 9. Future prospects for density gradient centrifugation . 254

9.1. Centrifuge design	255
9.2. Developments in centrifuge rotors	257
9.3. Developments in ancillary systems	259
9.4. Uses of centrifugal methods	260

*Acknowledgements 262**Appendix I. Manufacturers and suppliers of centrifuges, ancillary equipment and special chemicals 263**Appendix II. Glossary of terms used in density gradient centrifugation 265**Appendix III. Density and sedimentation coefficients of rat liver cell organelles 269**Appendix IV. Theory of preparation of density gradients 271**References 274**Subject index 287*

1.6.2.5. Compatibility of centrifuge and rotor	35
1.6.2.6. Water leaks	35
1.6.2.7. Flammable solvents	36

1.7. Care of rotors	36
1.7.1. Choice of rotor	36
1.7.2. Properties and care of materials used in rotor construction	36
1.7.3. Washing and drying rotors	40
1.7.4. Assembly, disassembly and storage	41
1.7.5. Care of individual rotors	41
1.8. Guarantees on rotors	43

Chapter 2. Theoretical aspects of centrifugal separations 46

2.1. Theory of rate-zonal separations	46
2.1.1. Theory of sedimenting particles	47
2.1.2. Stability of the sample zone	51
2.1.3. Stability of a sedimenting zone	57
2.2. Theory of isopycnic banding	59
2.2.1. Shape of zones separated by isopycnic banding	59
2.2.2. Redistribution of density gradient solutes in a centrifugal field	60
2.2.3. Influence of the rotor on gradient shape	64
2.3. Effects of density gradient solutes on subcellular structures	64

Chapter 3. Conditions for a centrifugal separation 70

3.1. Choice of approach	70
3.2. Choice of rotor	75
3.3. Density gradient solutes	79
3.3.1. Salts of alkali metals	80
3.3.2. Small hydrophilic organic molecules	81
3.3.3. High molecular weight organic compounds	86
3.3.4. Other types of density gradient solutes	87
3.3.5. Choice of gradient material	89
3.4. Choice of gradient	90
3.4.1. Gradient for rate-zonal separations	90
3.4.2. Gradient for isopycnic separations	91
3.4.3. Design of complex gradients	93

Chapter 4. Centrifugation in conventional rotors 97

4.1. Rate-zonal centrifugation	97
4.1.1. Preparation of the density gradient	97

4.1.2. Layering of sample on to the gradient	103
4.1.3. Centrifugation	105
4.1.4. Recovery from the gradient	108
4.1.5. Monitoring the displaced gradient	112
4.2. Isopycnic zonal centrifugation	115
4.2.1. Preparation of the density gradient	115
4.2.2. Layering of sample on to the gradient	117
4.2.3. Centrifugation	118
4.2.4. Displacement and monitoring of the gradient	118

Chapter 5. Centrifugation in zonal rotors 120

5.1. Conventional, non-reorienting zonal rotors	122
5.1.1. Construction of rotors	122
5.1.2. Types of zonal rotors	130
5.1.2.1. A-XII rotor	130
5.1.2.2. Z-15 rotor	134
5.1.2.3. HS rotor	134
5.1.2.4. B-IV rotor	135
5.1.2.5. B-XIV and B-XV rotors	136
5.1.2.6. B-XXIX and B-XXX rotors	139
5.1.2.7. Interchangeable batch and continuous-flow rotors	140
5.1.2.8. Continuous-flow rotors	141
5.1.2.9. Other rotors	142
5.1.3. Operation of zonal rotors	143
5.1.3.1. Preparations for a run	144
5.1.3.2. Gradient loading	153
5.1.3.3. Sample loading	156
5.1.3.4. Acceleration spin and deceleration	163
5.1.3.5. Unloading	168
5.1.3.6. Monitoring and fraction collecting	174
5.1.4. Ancillary equipment	180
5.1.4.1. Gradient makers	180
5.1.4.2. Pumps	182
5.1.4.3. Refractometers and density meters	183
5.1.4.4. Spectrophotometers, colorimeters and UV meters	185
5.1.4.5. Flow-through cells	185
5.1.4.6. Thermometers	186
5.1.4.7. Perfusion pumps	186
5.1.4.8. Stroboscopic lamps	186
5.1.4.9. Recorders	186

5.1.4.10. Cooling equipment	187
5.1.4.11. Minor accessories	187
5.1.4.12. Fraction collectors	188
5.1.4.13. Integrator	189
5.2. Reorienting zonal rotors	189

Chapter 6. Assay of fractions separated by density gradient centrifugation 197

6.1. Enzyme and chemical assays on fractions	197
6.2. Electron microscopic examination of fractions	198
6.3. Assessment of results from density gradient separations	200
6.4. Calculation of sedimentation coefficients	202

Chapter 7. Applications of density gradient centrifugation 205

7.1. Separation of living cells	205
7.2. Separation of cell organelles from mammalian tissues	208
7.2.1. Subfractionation of a crude nuclear fraction and separation of large sheets of plasma membranes	210
7.2.1.1. Subfractionation of purified nuclei	211
7.2.2. Subfractionation of the mitochondrial fraction	212
7.2.3. Subfractionation of the lysosomal fraction	214
7.2.4. Subfractionation of microsomes	217
7.2.5. Fractionation of ribonucleoprotein particles	222
7.2.6. Fractionation of chromatin	225
7.3. Separation of subcellular structures from plant cells	226
7.4. Separation of subcellular structures from unicellular organisms	229
7.5. Fractionation of macromolecules	232
7.5.1. Nucleic acids	232
7.5.2. Proteins	235
7.6. Other applications of density gradient centrifugation in biochemistry	237
7.6.1. Fractionation of serum lipoproteins	237
7.6.2. Separation of viruses	239
7.7. Other applications of density gradient centrifugation	242

Chapter 8. Artifacts arising during centrifugal separations . . . 243

8.1. Damage to particles during centrifugation	243
8.1.1. Damage caused by pelleting	244
8.1.2. Damage due to high hydrostatic pressure	245
8.1.3. Damage due to high concentration of the gradient solute	245
8.2. Factors affecting the accuracy of assays performed on fractions from density gradients	246
8.2.1. Reaction of the gradient solute with reagents used in the assay of separated constituents	247
8.2.2. Interference with the performance of analytical equipment	248
8.2.3. Interference in the sensitivity of assays	249
8.3. Uncertainties in estimates of particle density and sedimentation coefficient	250
8.3.1. Particle density	250
8.3.2. Sedimentation coefficient	251

Chapter 9. Future prospects for density gradient centrifugation . 254

9.1. Centrifuge design	255
9.2. Developments in centrifuge rotors	257
9.3. Developments in ancillary systems	259
9.4. Uses of centrifugal methods	260

*Acknowledgements 262**Appendix I. Manufacturers and suppliers of centrifuges, ancillary equipment and special chemicals 263**Appendix II.
