# 简明目录

## 第1章 导言 13

## 第2章 系统蓝图与需求 17

2.1组件概览 ..... 17

2.2平台和 PAM ..... 21

## 第3章 门户安装、配置和定制 27

3.1一个测试系统的示例安装：SAP EP 5.0 ..... 27

3.2根据用户和角色来设置门户 ..... 46

3.3使用SAP EP 6.0 安装一个测试系统 ..... 48

## 第4章 SAP 业务信息仓库 59

4.1功能概览 ..... 59

4.2抽取层 ..... 60

4.3建模层 ..... 61

4.4报表和分析层 ..... 71

## 第5章 SAP业务信息仓库 与企业门户的集成 77

5.1 基本技术要求 .....	77
5.2 BW Web 应用（报表和分析层）	
在门户中的可用性 .....	83
5.3 在门户中集成BW组件（管理层） .....	100
5.4 不同系统中的信息交换：一至化与拖曳&关联	
（抽取层） .....	101

## **第6章 mySAP 客户关系管理 和SAP 企业门户 107**

6.1 客户导向概念基础 .....	107
6.2 mySAP CRM(4.0 版) .....	111
6.3 集成方案：mySAP CRM 和 SAP EP .....	116

## **第7章 Unifiers 125**

7.1 Unifiers 和 Unification 服务器 .....	125
7.2 Unification 服务器 .....	127
7.3 用于SAP R/3 和 SAP BW 的SAP Unifiers .....	127
7.4 数据库Unifiers .....	130
7.5 Internet 组件 .....	139
7.6 SAP 企业门户 6.0 版中的Unifiers	
的增强功能 .....	140

## **第8章 iViews 143**

8.1 门户中的角色和导航 .....	147
8.2 已存在的iViews .....	151
8.3 自建的iViews .....	152

## 第9章 JAVA iView 开发

161

9.1 JAVA, JAVA Servlets和 JAVA Server Pages .....	161
9.2 Servlets 和 门户组件 —— 入门示例 .....	182
9.3 开发周期 .....	198
9.4 JAVA 门户组件 .....	199
9.5 JSP和 DynPages .....	202

## 第10章 互连性

215

10.1 SAP JAVA 连接器 .....	215
10.2 SAP 商业连接器 .....	221
10.3 SAP 交换架构 .....	222
10.4 其他连接器 .....	222

## 第11章 门户与安全

223

11.1 概览 .....	223
11.2 SAP EP6.0版中新的安全特性 .....	225
11.3安全网络通信(SNC) .....	225
11.4 安全套接层(SSL) .....	227
11.5 身份验证 .....	229
11.6 单点登录 .....	233
11.7 用户管理、角色及授权 .....	247
11.8 数字签名 .....	253
11.9 安全网络 .....	264

**第12章 新技术和开发平台** **267**

12.1 SAP NetWeaver ..... 268

12.2 SAP 交换架构 ..... 273

12.3 SAP NetWeaver开发者工作室 ..... 276

12.4 Web Dynpro开发 ..... 282

**附录** **287**

A 术语表 ..... 287

B SAP EP5.0和6.0中的对象模型 ..... 295

C 参考文献 ..... 297

D 关于作者 ..... 299

索引 ..... 301

# Contents

<b>Preface</b>	<b>11</b>
<b>1 Introduction</b>	<b>13</b>
<b>2 System Landscape and Requirements</b>	<b>17</b>
2.1 Overview of Components	17
2.1.1 Portal Infrastructure	18
2.1.2 Unifiers	18
2.1.3 SAP Knowledge Management (SAP KM)	19
2.1.4 LDAP Server and UME	20
2.1.5 Connectors	21
2.2 Platforms and PAM	21
2.2.1 Scenarios for Distributing Portal Components on Various Instances	21
2.2.2 Hardware Requirements	22
2.2.3 Software Requirements	22
<b>3 Portal Installation, Configuration, and Customizing</b>	<b>27</b>
3.1 Sample Installation of a Test System: SAP EP 5.0	27
3.1.1 Database Server	28
3.1.2 Java Development Kit (JDK)	30
3.1.3 Java Application Server (J2EE Engine)	31
3.1.4 Internet Information Server (IIS)	33
3.1.5 Database Client	34
3.1.6 Microsoft Data Access Component (MDAC)	34
3.1.7 Novell Developer Kit (NDK)	34
3.1.8 Directory Server—LDAP	35
3.1.9 Checking the Installation Requirements	36
3.1.10 SAP Enterprise Portal	37
3.2 Setting Up the Portal for Users and Roles	46
3.3 Sample Installation for a Test System with SAP EP 6.0	48
3.3.1 Planning	48
3.3.2 Preparations	49
3.3.3 Installation under UNIX	51
3.3.4 Proxy Settings	54

3.3.5	Logging On .....	55
3.3.6	User Management .....	56
3.3.7	Licensing .....	58
3.3.8	Setting Up Roles .....	58

## **4 SAP Business Information Warehouse 59**

4.1	Functional Overview .....	59
4.1.1	Advantages of the Implementation .....	59
4.1.2	Three-Layer Architecture .....	60
4.2	The Extraction Layer .....	60
4.3	The Modeling Layer .....	61
4.3.1	Elements of Modeling .....	62
4.3.2	Monitoring .....	65
4.3.3	Reporting Agent .....	66
4.3.4	Transport Connection .....	66
4.3.5	Documents .....	67
4.3.6	Business Content (BC) .....	67
4.3.7	Translation .....	68
4.3.8	Metadata Repository .....	69
4.3.9	Large-Scale Architectures .....	69
4.4	The Reporting and Analysis Layer .....	71
4.4.1	BEx Query Designer .....	71
4.4.2	BEx Analyzer .....	74
4.4.3	BEx Web—Analysis and Reporting on the Web .....	75

## **5 Integrating SAP Business Information Warehouse with SAP Enterprise Portal 77**

5.1	Basic Technical Requirements .....	77
5.1.1	Requirements in the SAP BW (3.x) System .....	78
5.1.2	Settings in Enterprise Portal (Release 5.0) .....	78
5.1.3	Settings in SAP NetWeaver '04 (SAP BW 3.5/SAP EP 6.0) .....	80
5.2	Availability of BW Web Applications in the Portal (Reporting and Analysis Layer) .....	83
5.2.1	Personalization and Roles .....	83
5.2.2	Creating a Web Application with the WAD .....	84
5.2.3	Availability of BW Web Applications in the Portal (SAP BW 3.1/SAP EP 5.0) .....	93
5.2.4	SAP NetWeaver '04 and the Availability of BW Web Applications in the Portal (SAP BW 3.5/SAP EP 6.0) .....	97
5.3	Integration of BW Components in the Portal (Administration Layer) ....	100

5.4	Information Exchange Among Various Systems: Unification and Drag&Relate (Extraction Layer) .....	101
5.4.1	Technical Requirements and Customizing for D&R .....	102
5.4.2	D&R Scenarios .....	103
5.4.3	The iPanel .....	104
5.4.4	D&R Example .....	104
5.4.5	D&R and the Multidimensionality of BW .....	106
5.4.6	Client-Side, iView-Related Triggering of Events .....	106

## **6 mySAP Customer Relationship Management and SAP Enterprise Portal 107**

6.1	Basics of Customer Orientation .....	107
6.1.1	The Term CRM .....	107
6.1.2	Functional Areas of CRM .....	107
6.1.3	Other Important CRM Terms .....	109
6.2	mySAP CRM (Release 4.0) .....	111
6.2.1	Architectural Overview .....	111
6.2.2	Functional Overview .....	113
6.2.3	Integration with SAP NetWeaver .....	115
6.3	Integration Scenario: mySAP CRM and SAP EP .....	116

## **7 Unifiers 125**

7.1	Unifiers and the Unification Server .....	125
7.2	Unification Server .....	127
7.3	SAP Unifier for SAP R/3 and SAP BW .....	127
7.4	Database Unifier .....	130
7.4.1	Project Generation .....	131
7.4.2	User Management .....	135
7.4.3	iPanel Assignment .....	135
7.4.4	Editing Relationships .....	136
7.4.5	Integration of the Unifier with the Portal .....	137
7.5	Internet Components .....	139
7.6	Enhancement for SAP Enterprise Portal 6.0 .....	140

## **8 iViews 143**

8.1	Roles and Navigation in the Portal .....	147
8.2	Ready-Made iViews .....	151
8.3	Self-Created iViews .....	152
8.3.1	iView Catcher .....	152
8.3.2	Java and .NET iViews .....	154

## **9 Java iView Development 161**

<b>9.1</b>	<b>Java, Java Servlets, and Java Server Pages</b>	<b>161</b>
9.1.1	Java Is More Than an Island	161
9.1.2	Java as a Representative Object-Oriented Programming Language	162
9.1.3	Applets, Applications, and a First Small Java Program	165
9.1.4	Java and Network Programming	168
9.1.5	Java Servlets and Java Server Pages	174
<b>9.2</b>	<b>Servlets and PortalComponents—Introductory Example</b>	<b>182</b>
9.2.1	SAP Portal Development Kit	188
9.2.2	Installation of SAP PDK 5.0	189
9.2.3	Installation of SAP PDK 6.0	191
9.2.4	Editor and File System	192
9.2.5	Deployment Descriptor in SAP EP 6.0	195
<b>9.3</b>	<b>The Development Cycle</b>	<b>198</b>
<b>9.4</b>	<b>Java PortalComponents</b>	<b>199</b>
<b>9.5</b>	<b>Java Server Pages and DynPages</b>	<b>202</b>

## **10 Connectivity 215**

<b>10.1</b>	<b>SAP Java Connector</b>	<b>215</b>
<b>10.2</b>	<b>SAP Business Connector</b>	<b>221</b>
<b>10.3</b>	<b>SAP Exchange Infrastructure</b>	<b>222</b>
<b>10.4</b>	<b>Additional Connectors</b>	<b>222</b>

## **11 Portals and Security 223**

<b>11.1</b>	<b>Overview</b>	<b>223</b>
<b>11.2</b>	<b>New Security Features in SAP Enterprise Portal 6.0</b>	<b>225</b>
<b>11.3</b>	<b>Secure Network Communications (SNC)</b>	<b>225</b>
<b>11.4</b>	<b>SSL</b>	<b>227</b>
11.4.1	Configuration of Microsoft IIS	228
11.4.2	Configuration of the J2EE Engine for SSL	228
<b>11.5</b>	<b>Authentication</b>	<b>229</b>
11.5.1	User ID and Password	229
11.5.2	X.509—Digital Certificates	229
11.5.3	SAP Authentication	231
11.5.4	External Authentication	231
<b>11.6</b>	<b>Single Sign-On</b>	<b>233</b>
11.6.1	Single Sign-On and SAP Systems	235
11.6.2	Configuration of the Systems	239
11.6.3	Single Sign-On and Non-SAP Systems	243
11.6.4	Domain Restrictions	244

11.6.5	Requesting Portal Certificates .....	245
11.6.6	Risks with SAP Logon Tickets and User IDs and Passwords Without SSL .....	246
11.7	<b>User Management, Roles, and Authorizations</b> .....	247
11.7.1	Persistence of User Data .....	247
11.7.2	Roles and Authorizations .....	249
11.7.3	Authorization Model for PortalComponent/Services .....	251
11.8	<b>Digital Signatures</b> .....	253
11.8.1	What Are Digital Signatures? .....	253
11.8.2	Procedure for Using Digital Signatures .....	253
11.8.3	Types of Signatures .....	255
11.8.4	Legal Foundations .....	255
11.8.5	Potential Cost Savings .....	256
11.8.6	Digital Signatures at SAP .....	257
11.9	<b>Secure Networks</b> .....	264

## **12 New Technologies and Development Platforms 267**

12.1	<b>SAP NetWeaver</b> .....	268
12.1.1	People Integration .....	269
12.1.2	Information Integration .....	271
12.1.3	Process Integration .....	273
12.2	<b>SAP Exchange Infrastructure (SAP XI)</b> .....	273
12.2.1	Uses of SAP XI .....	274
12.2.2	Runtime Components of SAP XI .....	275
12.2.3	Creating Messages .....	276
12.3	<b>SAP NetWeaver Developer Studio</b> .....	276
12.3.1	SAP NetWeaver Developer Studio: Introduction .....	276
12.3.2	Plug-Ins for Eclipse .....	277
12.3.3	Plug-Ins for SAP NetWeaver Developer Studio .....	277
12.4	<b>Web Dynpro Development</b> .....	282
12.4.1	The Design Pattern .....	283
12.4.2	Requirements .....	284
12.4.3	Developing a Sample Application .....	284

## Preface

*Portal* [from Medieval Latin *porta* (city gate)]: the often imposing entrance to a church or cathedral. A portal provides access to the holy of holies.

At first glance, the use of the term *portal* in information technology appears inappropriate. In the main sense of (IT) portals—the combination of Web content and applications—one could just as well speak of a center, much as one does of a call center. But portals are much more. They involve not only bundling information and applications, but also the targeted processing of decision-making documents so that employees, customers, and partners can make optimal decisions. Because such decisions require information from the *most holy* of IT systems, the term portal does not seem so inappropriate.

First, portals do more than use Web technologies to provide information and applications. They unify the information and applications so that users can work from an integrated interface. Portals also tailor information and applications so users don't have to expend considerable energy creating the configuration themselves. In addition, portals integrate structured and unstructured data from the Internet, a company's intranet, and other applications into the environment that is most conducive to supporting the users' productivity. Portals therefore help users to find, organize, and access information efficiently and effectively.

Secondly, portals build an integration platform for users; the actual technical components can hide behind the platform. A portal can partially fulfill user-oriented success factors for an application, such as *usability* and *look and feel*, and increase the acceptance of those applications that are critical to a company's success. This approach makes it much easier to exchange applications. Laborious product training and complicated installation procedures to heap the frontends of applications onto employees' personal computers are no longer needed. Even non-Web-enabled legacy applications can be integrated with a portal framework. And applications can be made available to customers, vendors, and partners instantly. Portals therefore can also lighten the load on administrators by reducing IT overhead.

Lastly, portals create consistent and context-sensitive access to Web services—the programming technology of the near future. In terms of tech-

nology, Web services consist of a structured, uniform, and content rich question–answer protocol that, by its very nature, does not include a user interface. A Java server page (JSP) or an active server page can be written quickly; however, if a Web service were to run alone in a Web browser, the page would have to handle all the context information and menu prompts itself. A portal also handles those tasks; it is the generic graphical user interface (GUI) of the future.

But the plug-and-play installation of portals is still at least several years away. The problem arises not because of the portals, but due to today's often extremely heterogeneous IT infrastructure. In the world of Web services, a portal installation consists primarily of configuration procedures. Today, however, various information and application sources must be adjusted to fit the portal, which can involve considerable effort. The critical precondition for a portal is that the company that wants to implement it can clearly identify *to whom* specific content should be displayed and *who* should make what decisions regarding IT support. That's why most portal projects are assembled with the discovery or rediscovery of company processes and structures. Technical, operative, and even social hurdles must be overcome.

This book takes a unique approach to these considerations. The authors demonstrate the various phases of a portal project and, based on their practical experience, show how to lead a portal project to a successful conclusion. Security is certainly an integral part of success: without appropriate security measures, a portal project poses an extremely high risk for the company—the risk of offering on a platter data worthy of protection to any Internet user interested in it. The authors address this concern thoroughly and offer several options to ensure the security of a portal.

Initially, portals were looked at with skeptical amusement. The benefits of portals were often questioned, especially after the hype related to e-business. *But the changing basic IT architecture and Web services will make portals indispensable in the near future.* This book contributes to the successful implementation of this important component of tomorrow's IT architecture.

**Dr. Sachar Paulus**

December 2004

# 1 Introduction

*I would not lead you willingly astray,  
But as regards this science, you will find  
So hard it is to shun the erring way,  
And so much hidden poison lies therein,  
Which scarce can you discern from medicine.  
Here too it is the best, to listen but to one,  
And by the master's words to swear alone.  
To sum up all--To words hold fast!  
Then the safe gate securely pass'd,  
You'll reach the lane of certainty at last.  
Johann W. von Goethe, Faust—Part I*

A great deal of time has passed since SAP crossed the narrow boundaries of enterprise resource planning (ERP) and introduced mySAP.com in 1999, and increasingly addressed communications and business processes among companies. Since then, the SAP portfolio of products—marketed today as *mySAP Business Suite*—has changed and expanded in a manner that could hardly be fathomed by those who can recall the good old days of SAP R/3. While the mapping and optimization of processes *within* a company—with the use of *one* comprehensive software package—characterized the 1990s, since then, the focus has effectively changed. The ability to map processes *between* companies, facilitate communication among employees working from widely separated locations, combine information from various sources into one uniform interface, and realize seamless collaboration between several applications characterize today's market.

The levels of integration that SAP now calls *the* challenge for the development of business software can be summarized as follows:

**Three levels of integration**

- ▶ Integration of customers, employees, and business partners
- ▶ Integration of existing information
- ▶ Integration of business processes

With its new integration and application platform, *SAP NetWeaver*, SAP has realized these three levels. *SAP Enterprise Portal (SAP EP)* plays a vital role here: it functions as a central component for the first two integration levels. It's well-suited to integrate and personalize the contents of a PC

**SAP NetWeaver**

interface in ways that have long been impossible, and it closely aligns a company's business partners with its employees.

But the functions of SAP EP go even further. Based on various technologies developed over the years, such as Drag&Relate or collaboration functions, SAP EP enables the display and smooth linking of information from the most varied of sources, and it fosters collaboration among widely separated employees of one or more companies.

**Portal as a  
standard interface**

SAP Enterprise Portal has an important place in the overall strategy of SAP. It has been the standard interface for mySAP CRM since Release 3.1, and we can assume that it will increasingly replace the dynpro interfaces of additional solutions in mySAP Business Suite. In the long term, an SAP system landscape without SAP Enterprise Portal is simply inconceivable.

This book provides a detailed look at the technical abilities of SAP EP and its numerous options for integrating applications and information. It offers a solid foundation on several topics, including system requirements, installation, linking content, and security issues. In light of current development work, we intentionally wrote the book so that it would be valid for both SAP EP 5.0 and SAP EP 6.0; the text highlights the difference between the two releases where appropriate.

**Structure  
of the book**

**Chapter 2** addresses the system landscape, including the requirements for installing SAP EP. It examines operating systems individually and deals with the peculiarities of individual components of the portal during installation.

With the use of a sample installation, **Chapter 3** illustrates how to set up SAP EP 5.0 in a Windows NT/2000 environment. Then, it shows you how to install SAP EP 6.0 in a UNIX environment. This chapter also explains how to create users and roles.

**Chapter 4** describes a business application from the portfolio of mySAP products and an essential component of SAP NetWeaver—the SAP Business Information Warehouse (SAP BW). The functionality of these products is explained so far, that readers could understand, in terms of how to integrate content from SAP BW in the portal.

**Chapter 5** builds on the topics covered in Chapter 4 and illustrates sample integration for the reporting, administration, and extraction levels. The chapter ends with an introduction to Drag&Relate functionality.

**Chapter 6** provides a general overview of customer relationship management (CRM) and the characteristics of CRM that are specific to SAP.
