

RUBBER CHEMICALS

GRATING SPECTRA

Vol. 1

J1K - J300K

LEGAL NOTICE

The publication of the physical data of the Sadtler Standard Spectra and the Sadtler Commercial Spectra is intended to be descriptive. As the samples of the materials represented have come generally from other sources than our own laboratories and frequently without the donors knowledge of their part in this publication, there can be no warranty either implied or otherwise.

On the other hand every effort is made by Sadtler Research Laboratories to be sure that the reliability of the published spectrum is the best. When improved data is available or errors are called to our attention we revise and reissue the proper replacement spectra.

COPYRIGHT NOTICE

With the exception of brief intra-company reports, the spectra may not be reproduced without explicit written permission of the Sadtler Research Laboratories, Inc.

SADTLER COMMERCIAL INFRARED SPECTRA

RUBBER CHEMICALS

INDICES

The following indices refer to the publications of 750 prism absorption spectra and 600 grating spectra of Rubber Chemicals.

The alphabetical index lists the products according to trade name with the corresponding spectrum numbers, prism and grating, chemical name cross-references are also included when they are designated by the manufacturer.

The classification index, a scheme of arranging the spectra, has been devised through several years of experience in using the catalog for practical studies. Its purpose is to establish an orderly arrangement of those spectra exhibiting similar overall curves. It is especially useful in respect to the characterization of "unknown" samples. It is possible, if the user so desires, to separate and file the spectra of similar materials in numerical sequence under the various group headings and still rapidly locate the spectrum of a given product by trade name. The titles, subtitles and corresponding code numbers for the various classes are shown below.

The code number in the column to the left of the spectrum numbers in each index is an arbitrarily assigned manufacturers code. Our index of manufacturers is updated annually and published with the Composite Alphabetical Index.

CLASSIFICATION SCHEME

012	Thiazole Accelerators	150	Peptizers
014	Dithiocarbamate Accelerators	170	Processing Aids
016	Thiuram Sulfide Accelerators	190	Tackifiers
018	Guanidine Accelerators	210	Non-Black Fillers and Reinforcers
020	Thiourea Accelerators	230	Blowing Agents and Promoters
022	Aldehyde-Amine Accelerators	270	Modifiers, Extenders, Terminators
028	Other Accelerators	290	Reclaiming Materials
030	Activators	450	Latex Antifoam Agents
050	Retarders, Scorch Preventers	490	Latex Dispersing Agents
070	Vulcanizing and Curing Agents	530	Latex Stabilizers
090	Antioxidants, Antiozonants, Inhibitors	550	Latex Thickeners
110	Stabilizers	560	Odorants
130	Plasticizers and Softeners	570	Miscellaneous

RUBBER CHEMICALS

GRATING SPECTRA

This collection contains 600 grating infrared absorption spectra of commercially available materials used as compounding ingredients in rubber processing.

The spectrograms have been prepared on a Perkin-Elmer 521 grating spectrophotometer which gives transmittance vs. linear frequency (wave number) presentation. The spectra were determined in the spectral region 4000 cm^{-1} to 250 cm^{-1} (2.5 to 40 microns) with two grating changes: first order at 1997 cm^{-1} to 1992 cm^{-1} and second order at 634 cm^{-1} to 632 cm^{-1} . The stray light filters incorporated in the instrument are at approximately 3138 cm^{-1} , 2490 cm^{-1} , 1520 cm^{-1} , 1130 cm^{-1} and 390 cm^{-1} . Each spectrum is labelled with the trade name of the product, the chemical description, pertinent physical data, the supplier of the sample, and the method of sample preparation. With the exception of emulsified products, all materials have been examined in the "as received" form; emulsions were dried before being scanned.

It will be noted that products containing the same active ingredient, but of different trade names, have been included in this catalog. These materials have been supplied by various manufacturers and differ only in that sense.

An alphabetical index and a usage classification index are supplied with the collection, they are described in detail in the preface to the indices.

Representative products from this collection have also been scanned on a Beckman IR-4 prism spectrophotometer and published in a catalog of grating spectra.

We acknowledge the continuing cooperation of manufacturers in supplying samples for inclusion in this catalog of reference spectra.
