Table of Contents

chapter

1. The Physical Examination, 13
2. Lesions of the Oral Cavity, 45
3. Diseases of the Pharynx, 65
4. Tonsils and Adenoids, 87
5. Diseases of the Nasopharynx, 100
6. The Larynx—Anatomy; Physiology; Paralysis, 107
7. The Larynx—Non-Neoplastic Conditions, 118
8. The Larynx—Laryngeal Tumors, 133

chapter

9. Tracheotomy, 147
10. The Trachea and Bronchi, 154
11. Diseases of the Esophagus, 170
12. The Nose and Paranasal Sinuses, 190
13. Nosebleed, 203
14. The Nasal Septum; Rhinoplasty; Maxillary and Nasal Fractures, 212
15. Acute and Chronic Diseases of the Nose, 224
16. Acute and Chronic Sinusitis, 235
17. Complications of Acute and Chronic Sinusitis; Tumors of the Nose and Sinuses, 250
18. Anatomy of the Ear, 263
19. Physiology of Hearing, 281
20. Modern Audiometry, 293

chapter

21. The Labyrinth, 310
22. Diseases and Abnormalities of the External Ear, 318
23. The Tympanic Membrane, 333
24. Diseases of the Middle Ear and Mastoid, 342
25. Hearing Losses, 360
26. Tinnitus, 380
27. Speech Disorders (David D. DeWeese, M.D., and Herold Lillywhite, Ph.D.), 385
28. Rehabilitation of Persons with Hearing Loss, 396
29. Dizziness and Vertigo, 403
30. The Facial Nerve, 421
31. The Salivary Glands, 431
32. Cysts and Other Tumors of the Neck, 446

Preface

This textbook is designed primarily for the medical student and the general practitioner. Emphasis is on diagnosis and treatment. The discussions of anatomy and physiology contain adequate data for orientation but are not so detailed that the student is overburdened. The selected readings indicate sources of additional information.

Examination of the ears, nose, and throat requires special techniques and instruments. The first chapter emphasizes this. If the student cannot examine the ears, nose, and throat, and if he does not know normal appearances, he will not be able to diagnose or treat diseases of these parts.

Attention is drawn to the new concepts of diagnosis, treatment, and rehabilitation which, in the last two and one-half decades, have broadened the scope of the speciality. Special emphasis is placed on diseases of the salivary glands, the facial nerve, and speech problems, chapters of importance which are often overlooked. The current interest in otologic surgery and in the physiology of hearing has led to careful correlation of disease states and operative procedures with anatomy and physiology of the ear.

We wish to acknowledge the contributions of photographic material from colleagues in otolaryngology and allied fields. Credit for these contributions is given in the legends. For original drawings, we are indebted to Mrs. Clarice Ashworth Francone and Mrs. Kay Bittick of the Department of Medical Illustration, University of Oregon Medical School, and to Mrs. William H. Saunders and Mr. Jack Borror, Columbus, Ohio. For preparation of photographs, we express thanks to Mr. Charles V. Von Wald and Mr. James T. Phillips of the Department of Medical Photography, University of Oregon Medical School, and to Mr. William Frederick Shepard and Mr. Edward E. Schwyn of the Department of Photography, The Ohio State University College of Medicine. Dr. William H. Lippy, resident in otolaryngology, The Ohio State University College of Medicine, and Miss Patricia Potter, R.N., posed for many of the photographs.
