RADIATION SAFETY TECHNICIAN TRAINING COURSE

by

H. J. Moe, S. R. Lasuk,
M. C. Schumacher
Industrial Hygiene and Safety Division

and

H. M. Hunt
University of Nevada, Las Vegas

May 1972

This report supersedes ANL-7291

TABLE OF CONTENTS

	Page
ABSTRACT	19
SECTION 1 - BASIC INFORMATION	21
A. Atomic Structure	21
B. Ionization	23
C. Isotopes	24
D. Particle Dynamics	24
E. Work and Energy	25
F. Charged Particles	26
G. Relativistic Corrections	28
H. Charged Particle in a Magnetic Field	28
BIBLIOGRAPHY	29
SECTION 2 - NATURAL RADIOACTIVITY	34
A. Early History	34
B. Radioactive Decay	35
C. Half-life	38
D. Curie	39
E. Specific Activity	40
F. Decay Chains	40
G. Decay Curve of a Mixture	42
BIBLIOGRAPHY	45
SECTION 3 - PROPERTIES OF ALPHA, BETA, GAMMA, X RAYS, AND NEUTRONS	50
A. Alpha particles	50
1. Specific Ionization	51
2. Stopping Power	53
3. Range	53
4. Relative Hazard	55
B. Beta Particles	55
1. Specific Ionization	56
2. Stopping Power	57
3. Radiation Production - Bremsstrahlung	58
4. Range	59
5. Exponential β-particle Absorption	60
6. Relative Hazard	61
C. Wave Properties	61
D. Electromagnetic Waves	62

TABLE OF CONTENTS

	Page
E. X and γ Radiation	64
1. Interactions with Matter	66
2. Photoelectric Effect	66
3. Compton Effect	68
4. Pair Production	70
5. Absorption of X and γ Rays	71
6. Half-value Layer	73
7. Mean Free Path	73
8. μ_{en}/ρ	74
9. Buildup Factor	75
10. Relative Hazard	75
F. Neutrons	76
1. Sources of Neutrons	77
2. Neutron Energy	78
3. Interactions with Matter	79
4. Cross Sections	81
5. Neutron Absorption	83
6. Removal Cross Section Σ_R	84
7. Neutron Activation	86
8. Relative Hazard	88
BIBLIOGRAPHY	89
SECTION 4 - CONCEPTS OF RADIATION UNITS AND DOSE DETERMINATIONS	98
A. Definition of Terms	98
B. Quality Factor	99
C. Exposure	99
D. Exposure Rate - Isotropic Point Source	101
E. Exposure Rate - Flux Density	103
F. Absorbed Dose	103
G. Absorbed Dose Rate - Isotropic Point Source of Photons	104
H. Absorbed Dose Rate - Flux Density of Photons	105
I. Absorbed Dose Rate - Isotropic Point Source - Alpha and Beta Radiation.	105
J. Mass Stopping Power	105
K. Absorbed Dose Rate - Flux Density of Particles	107
L. Absorbed Dose for Neutrons	108
BIBLIOGRAPHY	110

试读结束：需要全本请在线购买： www.ertongbook.com

TABLE OF CONTENTS

	Page
SECTION 5 - SHIELDING	115
A. Factors Affecting Exposure in a Radiation Field	115
B. Alpha Radiation	116
C. Beta Radiation	117
D. Gamma Radiation	118
1. Calculations of Shield Thickness	118
2. Buildup Factor	121
3. Effective Atomic Number	123
E. Neutrons	125
F. Shielding Materials	127
BIBLIOGRAPHY	128
SECTION 6 - BIOLOGICAL EFFECTS OF RADIATION	133
A. The Cell - Basic Unit of Structure	133
B. Radiosensitivity	135
C. Radiation Damage	136
D. Somatic Effects	136
1. Blood and Bone Marrow	139
2. Lymphatic System	140
3. Digestive Tract	140
4. Reproductive Organs	141
5. Nervous System	141
6. Thyroid Gland	141
7. Eyes	142
8. Lungs	142
9. Liver and Gall Bladder	143
10. Kidneys	143
11. Circulatory System	143
12. Skin	143
13. Hair	144
14. Bones	144
E. Late Effects	144
1. Neoplasms	144
2. Tissue Effects	144
3. Life-span	145
4. Growth and Development	145
F. Hereditary Effects	145
BIBLIOGRAPHY	147
SECTION 7 - BACKGROUND RADIATION	150
A. Cosmic Radiation	150
B. Radioactivity of the Earth	153

TABLE OF CONTENTS

	Page
C. Radioactivity of Air	153
D. Radioactivity of Water	154
E. Radioactivity of the Human Body	155
F. Fallout	156
G. Effect of World-wide Fallout	158
BIBLIOGRAPHY	159
SECTION 8 - RADIATION PROTECTION STANDARDS	162
A. History of Protection Standards	162
1. Erythema Dose	162
2. Tolerance Dose	163
3. ICRU, ICRP, and NCRP	163
4. Permissible Dose	165
5. Total Accumulated Dose	166
6. Federal Radiation Council	167
7. Radiation Protection Guides	168
8. General Philosophy of the Federal Policy on Radiation Matters	169
B. Regulating Agencies	169
BIBLIOGRAPHY	171
SECTION 9 - INTERNAL DOSE CALCULATIONS	176
A. Main Factors Affecting Dose Calculations	176
B. Standard Man	180
C. Critical Organ	180
D. Effective Energy Per Disintegration	181
1. The Energy Absorbed per Disintegration, E	182
a. β^- Radiation	182
b. β^+ Radiation	182
c. γ Rays	183
d. Internal Conversion, e^-	183
e. α Radiation	183
f. Recoil Atoms	183
g. K and L Capture X Rays	183
2. Radioactive Chain Factor, F	184
3. Relative Biological Effectiveness, RBE	185
4. Relative Damage Factor, n	185
E. Other Factors	186
F. Maximum Permissible Body Burden	187
G. Body Burden Based on Radium	188
H. Body Burden Based on Dose Equivalent Rate	189

TABLE OF CONTENTS

	Page
I. MPC in Air and Water - Single Radionuclide	189
J. MPC Formulae for a Radioactive Series	191
K. MPC of Noble Gases - Submersion Exposure	193
L. MPC Values for a Mixture of Radionuclides	194
M. Dose Equivalent from Single Intake	194
N. Sample Calculations of $(MPC)_a$ and $(MPC)_w$	196
BIBLIOGRAPHY	202
SECTION 10 - RADIATION DETECTION PRINCIPLES	207
A. General	207
B. Ionization Method	208
1. Gas-filled Chambers	208
a. Pulse-size Considerations	209
b. Ion-chamber Region	210
c. Proportional Region	211
d. Region of Limited Proportionality	213
e. Geiger-Müller Region	213
2. Semiconductor Devices	214
a. Semiconductors	214
(1) Electron-Hole Pairs	215
(2) Effect of Impurities; n- and p-type Semiconductors	215
(3) Impurities; Traps	217
(4) Recombination	217
b. Conduction Counters	217
c. Semiconductor Junction Counters	218
C. Scintillation Devices	219
1. Phosphors	220
2. Types and Properties of Phosphors	220
3. Detection of Pulses	221
4. Photomultiplier Action	222
5. Scintillation Counters	223
6. Optical Coupling	224
D. Chemical Devices	224
E. Solid-state Devices	225
1. Optical Properties	225
2. Trap Depth	226
3. Optical Effects	227
a. Color Changes	227
b. Degraded Luminescence	227

TABLE OF CONTENTS

	Page
c. Radiophotoluminescence	228
d. Thermoluminescence	228
e. Stimulated Luminescence	229
F. Activation Detectors for Neutrons	229
1. General	229
2. Activation Detector Applications	230
a. Thermal-neutron Detection; Cadmium-difference Method	230
b. Resonance Measurements	230
c. Threshold Detection	231
BIBLIOGRAPHY	231
SECTION 11 - INSTRUMENT OPERATING CHARACTERISTICS AND COUNTING STATISTICS	238
A. Mean-level System	238
B. Pulse-type System	239
1. General	239
2. Pulse Counter	239
C. Count-rate Meter	239
D. Counter Plateau	241
E. Pulse-height Analysis	243
1. Pulse Size	243
2. Pulse-height Analyzer	244
a. Integral Count	244
b. Window	245
c. Differential Count	246
F. Resolving Time	247
1. Resolving-time Correction	247
2. Resolving-time Determination	248
3. Dead Time in Geiger-Müller Counters	249
G. Quenching	250
H. Sensitivity	251
1. Intrinsic Efficiency	252
2. Background Count Rate	252
3. Absorption Factors	253
4. Geometry	254
5. Absolute Sensitivity	255
6. Yield	255
I. Statistics of Measurement	256
1. Poisson Distribution and Gaussian Error Curve	256

TABLE OF CONTENTS

	Page
2. Standard Deviation of a Count	258
3. Error Designation	258
4. Standard Deviation of a Count Rate	259
5. Background Influence on Standard Deviation	260
6. Relative Standard Deviation	261
J. Counter Reliability	264
BIBLIOGRAPHY	264
SECTION 12 - HEALTH PHYSICS INSTRUMENTS	269
A. Radiation Dosimetry	269
1. Ionization Method	269
a. Bragg-Gray Principle	270
b. Air- and Tissue-equivalent Material	270
c. Energy Dependence	271
d. Charged-particle Equilibrium	271
e. Kerma	273
f. Ion-chamber Dose Measurements	273
g. Other Ionization Dose Measurements	274
2. Other Dosimetry Methods	274
3. Present Dosimetry Techniques	275
a. Linear Energy Transfer and Quality Factor Relationship	276
b. Distribution in LET of Dose	277
c. Summary	277
B. Survey Instruments	277
1. Ion-chamber Dosimeters	278
a. Electroscope	278
b. Condenser Chambers	279
c. Tissue-equivalent Dosimeter	280
2. Ion-chamber Survey Meters	281
a. Juno Survey Meter	283
b. Samson Survey Meter	284
c. Jordan Radector	284
3. Geiger-Müller Survey Meters	285
a. Design Features	285
b. Energy Dependence	286
c. Application	287
4. Proportional-counter Survey Meters	287
a. Air Proportional Alpha Counter	288
b. Gas Proportional Alpha Counter	289
c. BF_3 Proportional Neutron Counter	289
d. Long Counter	290
e. Other Proportional Neutron Survey Meters	292

TABLE OF CONTENTS

	Page
5. Scintillation Survey Meters	292
a. General Features	293
b. Alpha Scintillation Counters	293
c. Neutron Scintillation Counter	294
6. Activation Unit Survey Meters	295
a. High-energy Neutron Monitor	296
b. Spherical Neutron Foil Monitor	296
C. Special-purpose Instruments	298
1. Extrapolation Chamber	298
2. Spectrometry Units	299
a. LET Spectrometer	300
b. Junction-detector Alpha Spectrometer	301
c. Gamma-ray Scintillation Spectrometers	302
(1) Interactions in the Crystal	302
(2) Spectrum Peaks	304
(3) Pulse-height Spectrum Examples	305
BIBLIOGRAPHY	308
SECTION 13 - PERSONNEL MONITORING DEVICES	315
A. Introduction	315
B. Photographic Film Dosimetry	315
1. Emulsion Properties	316
2. Photographic Effect	317
a. Latent-image Formation	317
b. Film Density	318
3. Properties of Film Response	318
a. Characteristic Curve	318
b. General Features of the Characteristic Curve	319
c. Latent-image Fading	320
d. Film Speed	320
e. Energy Dependence for Unfiltered Film	321
f. Energy Dependence for Filtered Film	322
4. Processing of Film	323
5. Reading and Interpretation	323
a. Densitometer	324
b. Calibration Films	325
c. Interpretation	325
6. Film Holders	326
7. Film Packets	327
8. Electronic Equilibrium Conditions	327

TABLE OF CONTENTS

	Page
9. Neutron Dosimetry	328
a. Fast Neutrons	329
(1) Track Counting	329
(2) Sensitivity	330
(3) Latent-image Fading	330
(4) Reading and Interpretation	331
b. Thermal Neutrons	331
C. Pocket Dosimeters	332
1. Principle of Operation	333
2. Exposure Measurement	333
3. Characteristics	335
4. Energy Dependence	335
D. Solid-state Dosimeters	336
1. Thermoluminescence	336
a. Lattice Defects or Traps	337
b. Glow Curve	337
c. Characteristics	338
2. Infrared Stimulation	339
3. Radiophotoluminescence	340
a. General	340
b. Characteristics of Silver-activated Glass	340
4. Conductivity Methods	341
BIBLIOGRAPHY	342
SECTION 14 - AIR SAMPLING	348
A. Introduction	348
B. Nature of the Contaminant	348
C. Natural Airborne Radioactivity	349
D. Obtaining a Representative Sample; Choice of Sampler Location	350
E. Choosing a Sampler	351
F. Sampling Methods and Devices	352
1. Filter Samplers	352
2. Electrostatic Precipitators	354
3. Grab Samplers	355
4. Impingers	356
5. Condensation Devices	357
6. Adsorbers	358
7. Continuous Air Monitors	358
G. Filters	359

TABLE OF CONTENTS

	Page
H. Analysis of a Filter Sample	361
1. General	361
2. First-count Factor	364
3. Concentration of Long-lived Contaminants	368
4. Concentration of Short-lived Emitters	371
I. Stack Sampling	372
BIBLIOGRAPHY	373
SECTION 15 - REACTORS	380
A. History of Development	380
B. Fission	381
1. Fission Type	383
2. Fission Yield	384
3. Fission Rate	385
C. Nuclear Reactors	385
1. Reactor Components	386
2. Critical Size	387
3. Four-factor Formula	388
4. Effective Multiplication Factor	390
5. Reactor Control	391
a. Reactor Period	392
b. Reactivity	393
c. Reactor Control Systems	394
6. Reactor Materials	395
7. Power Level	396
8. Reactor Types	396
D. Radiation from Reactors	397
1. Leakage Radiation	397
2. Sources of Contained Activity	398
3. Sources of Airborne Activity	400
4. Sources of Contamination	402
E. Radiation Surveys	403
F. Reactor Survey Instruments	404
G. Fixed Monitors	405
H. Nuclear-accident Monitors	405
BIBLIOGRAPHY	407
SECTION 16 - HOT CELLS	412
A. Shielding	412
B. Liners	414
C. Services	415

TABLE OF CONTENTS

	Page
D. Ventilation	415
E. Drainage	416
F. Viewing Facilities	416
1. Windows	416
2. Periscopes	418
3. Mirrors and Television	419
G. Remote-handling Devices	419
H. Monitoring Hot-cell Operations	420
1. Cell Transfers	420
2. Decontamination	421
3. Filter Changes	422
I. Personnel Monitors	422
BIBLIOGRAPHY	423
SECTION 17 - PARTICLE ACCELERATORS	426
A. Accelerators	426
1. Cockcroft-Walton Accelerator	427
2. Van de Graaff Electrostatic Generator	429
a. General	429
b. Tandem Van de Graaff Machine	431
3. Linear Accelerators	431
a. Linear Radio-frequency Accelerator	431
b. Linear Electron Accelerator	432
c. Linear Proton Accelerator	433
4. Cyclotron	433
5. Betatron	435
6. Synchrotron	436
a. General	436
b. Zero-gradient Synchrotron (ZGS)	437
B. Elementary Particles	439
1. General	439
2. High-energy Processes	440
a. Mesons	440
b. Hyperons	441
C. Radiation Sources	442
1. Beam Interactions	442
2. Induced Radioactivity	443
3. Skyshine	444
4. Klystrons	444
5. Radioactive and Toxic Gases	444

TABLE OF CONTENTS

	Page
D. Radiation Protection Surveys	445
E. Radiation Survey Instruments	446
BIBLIOGRAPHY	448
APPENDIXES	
A. Fundamental Constants	453
B. Signs and Symbols	454
C. Signs and Symbols: Alphabetically by Symbol	456
D. Abbreviations	458
E. Mass Energy-Absorption Coefficients (μ_{en}/ρ)	461
F. Mathematical Data	463
Common Logarithms (Base 10)	464
Exponentials (Napierian Base)	469
Natural or Napierian Logarithms	474
Natural Logarithms and Exponentials (Chart)	477
G. List of Elements, and Chart of the Nuclides	479
INDEX	496

LIST OF FIGURES

No.	Title	Page
1.1	The Stable Fluorine Atom ($^{19}_{9}F$)	22
1.2	The Ionization of an Atom	23
1.3	The Electric Field E Is Perpendicular to the Plates	26
1.4	A Charged Particle Traveling Perpendicular to a Magnetic Field Which Is Directed into the Plane of the Paper	29
2.1	Radiation Deflection in a Magnetic Field	34
2.2	Radioactive Decay, Linear Plot	35
2.3	Radioactive Decay, Semilog Plot	35
2.4	Sample Decay Curve Using Example Data Above	43
3.1	Illustration of Alpha Tracks as Seen in a Cloud Chamber	50
3.2	Electrostatic Interaction	51
3.3	Excitation	51
3.4	The Ionization Increases as the Velocity of the Alpha Particle Decreases with Depth of Penetration.	52
3.5	Typical Beta Spectrum	55
3.6	The General Shape of the Specific Ionization vs. Energy Curve for β Particles	56
3.7	Bremsstrahlung.	58
3.8	Electromagnetic Wave	62
3.9	Typical X-Ray Spectrum	65
3.10	The Photoelectric Effect	67
3.11	Process Whereby a Photon Ejects an Auger Electron	68
3.12	The Compton Effect	69
3.13	Pair Production and Annihilation	70
3.14	Absorption of X and γ Rays	71
3.15	Wide Beam of γ Rays in an Absorber	74
3.16	Elastic Collision. Energy and momentum are conserved	80
3.17	Inelastic Collision	80
3.18	Impact Area	82
4.1	Isotropic Point Source	101
4.2	Mass Stopping Power of Alpha Radiation as a Function of Energy	106

LIST OF FIGURES

No.	Title	Page
4.3	Mass Stopping Power of Beta Radiation as a Function of Energy	107
4.4	Absorbed Dose for Neutrons as a Function of Energy	108
5.1	Relationships for Calculating Shield Thicknesses	119
10.1	Two-electrode, Gas-filled Chamber	209
10.2	Pulse Size as a Function of Voltage in Gas-filled, Two-electrode Chamber	210
10.3	Band Structure in Conductors, Semiconductors, and Insulators	214
10.4	Effect of "Doping" with a Desired Carrier Type	216
10.5	Diffused and Surface-barrier p-n Junctions	219
10.6	Illustrating Photomultiplier Action	222
10.7	Trap Effects in Solids Leading to Thermoluminescence and Radiophotoluminescence	226
11.1	Count-rate Meter Circuit	240
11.2	Counter Plateau in Geiger Region	242
11.3	Variation of Pulse Size with Time	244
11.4	Types of Pulse-height Spectrum	245
11.5	Geometry for a Circular Aperture and a Point Source.	255
11.6	Probability Distributions for Low and High Values of N	257
12.1	Equilibrium Thickness, t', for Charged-particle Equilibrium	272
12.2	Quartz-fiber Type Electroscope	279
12.3	Typical Setup for Long-counter Application	290
12.4	Long-counter Response	291
12.5	Sensor Geometry for the Spherical Neutron Foil Monitor	297
12.6	Response Curves for Three Spherical Neutron Detectors Compared to the Dose-equivalent Rate Function	297
12.7	Extrapolation Chamber	298
12.8	Plot of Extrapolation-chamber Data	299
12.9	LET Spectrometer Pulse-height Distribution	301
12.10	Alpha Pulse-height Spectrum in Silicon Detector	302
12.11	^{137}Cs Pulse-height Spectrum in a NaI(Tl) Crystal	306
