Table of Contents

Preface	13
---------------	----

Chapter 1 FUNDAMENTAL CONCEPTS

1.1 Introduction	15
(i) Applications in other fields of chemistry	16
(ii) Applications to the theoretical understanding of inorganic chemistry	17
1.2 Systematic Investigation of Solution Chemistry	17
1.3 Complexes	17
(i) Inner and outer sphere complexes	18
(ii) Chelate complexes	18
(iii) Mononuclear and polynuclear complexes	18
1.4 Stability	19
1.5 Thermodynamic Stability Constants	20
1.6 Stoichiometric Stability Constants	23
1.7 Determination of Thermodynamic Stability Constants	24
1.8 Medium	26
1.9 Nature of the Background Electrolyte	27
1.10 Thermodynamic Functions	28
(i) Gibbs free energy	28
(ii) Enthalpy	28
(iii) Entropy	30
References	30

Chapter 2 THE NUMBER AND NATURE OF SPECIES IN SOLUTION

2.1 Introduction	33
2.2 The Number of Species in Solution	33
2.3 Graphical Methods for Determining the Number of Species in Solution	36
(i) Graphical procedure when no restraint is placed upon the stoichiometry of the solutions examined	36

(ii) Graphical procedure for restricted stoichiometries.	40
2.4 Computational Methods for Determining the Number of Species in Solution.	41
2.5 The Nature of Species in Solution	44
(i) Molar ratio method	44
(ii) Method of continuous variations (Job's method)	45
2.6 Conclusion.	51
References	51

Chapter 3 TREATMENT OF DATA: DERIVED FUNCTIONS

3.1 Introduction.	53
3.2 Secondary Concentration Variables.	54
(i) The complex formation function, $\bar{n}$	54
(ii) The degree of formation, α_c	56
(iii) The degree of complex formation, ϕ	57
3.3 Inter-relationships Between $\bar{n}$, α_c and ϕ	57
3.4 Stepwise Formation of Complexes	58
3.5 Influence of the Spreading Factor, x , on the Formation Function, $\bar{n}$	59
3.6 Calculation of Stability Constants Based on the Complex Formation Function, $\bar{n}$	61
(i) Graphical methods based on $\bar{n}$	64
(ii) Numerical methods based on $\bar{n}$	65
3.7 Calculation of Stability Constants based on the Degree of Complex Formation ϕ	67
(i) Leden's method	67
(ii) Froneaus' method	70
3.8 Comparison of the Various Methods of Calculating Stability Constants.	71
References	72

Chapter 4 TREATMENT OF DATA: LINEAR METHODS, ERRORS AND STATISTICS

4.1 Introduction.	73
4.2 Model Building	73
4.3 Random Errors	74
4.4 Systematic Errors	76
4.5 Linear Least-squares	78
4.6 Limitations of Linear Least-squares	80
4.7 Linear Least-squares — Generalised Matrix Approach	81
4.8 Hypothesis Testing	83
4.9 Geometry of Linear Least-squares — The Error Ellipse	84
References	86

Chapter 5 TREATMENT OF DATA: NON-LINEAR PARAMETER ESTIMATION

5.1 Introduction.	87
5.2 Limitations of Graphical Methods.	87
5.3 Least-squares — Extension to Non-linear Case.	88
5.4 Hypothesis Testing	89
5.5 Geometry of Non-linear Least-squares.	90
5.6 Ill-conditioning of the Normal Equations — Convergence	91
5.7 Non-linear Least-squares Algorithms.	93
5.8 Parameter Correlation	95
5.9 Weighting and Errors	96
5.10 Systematic Errors	98
5.11 Experimental Design	98
5.12 Available Non-linear Least-squares Programs for the Calculation of Stability Constants.	100
References	104

Chapter 6 INTRODUCTION TO THE EXPERIMENTAL DETERMINATION OF STABILITY CONSTANTS

6.1 Introduction.	107
6.2 Choice of Method	108
6.3 Use of More Than One Experimental Method	108
6.4 Study of Weak Complexes.	109
6.5 Study of Very Strong Complexes	111
6.6 Polynuclear Complexes.	112
6.7 Interaction of Metal Ions With Polyelectrolytes.	114
References	115

Chapter 7 EXPERIMENTAL METHODS FOR STUDYING EQUILIBRIA. I. Potentiometry

7.1 Introduction.	117
7.2 Measurement of Potential	118
7.3 Experimental Technique for Determining Stability Constants	123
7.4 Electrodes	123
7.5 Calibration of Electrodes	124
7.6 Calculation of Stability Constants from Potentiometric Data	128
(i) Free metal ion or free ligand data.	128
(ii) pH data.	129
(iii) Use of competing metal ions	130
References	130

Chapter 8 EXPERIMENTAL METHODS FOR STUDYING EQUILIBRIA. II. Ultraviolet and Visible Spectrophotometry

8.1 Introduction	133
----------------------------	-----

8.2 Beer-Lambert-Bouguer Law	133
8.3 Measurement of Absorbance	135
8.4 Calculation of Stability Constants from Spectrophotometric Data	136
8.5 Method of Corresponding Solutions	137
References	144

Chapter 9 EXPERIMENTAL METHODS FOR STUDYING

EQUILIBRIA. III. Further Methods

9.1 Introduction	147
9.2 Spectroscopic Methods	147
(i) Infrared	147
(ii) Raman	148
(iii) Nuclear magnetic resonance	149
(iv) Electron spin resonance	153
(v) Mössbauer	155
(vi) Refractometry	155
(vii) Spectropolarimetry	156
(viii) Light scattering	157
(ix) Ultrasonic absorption	157
9.3 Distribution Methods	157
(i) Liquid-liquid partition (solvent extraction)	158
(ii) Solubility	159
(iii) Ion-exchange	160
(iv) Gas chromatography	162
(v) Liquid chromatography	164
(vi) Thin layer and paper chromatography	165
9.4 Electrochemical Methods	165
(i) Polarography	165
(ii) Anodic stripping voltammetry	167
(iii) Conductivity	167
(iv) Dielectric constant	168
9.5 Calorimetric Methods	168
(i) Direct calorimetry	169
(ii) Thermometric titration calorimetry	169
9.6 Miscellaneous Methods	172
References	172

Chapter 10 FIRST CASE STUDY: Linear ($\bar{n}$) Treatment of pH Data;

The Nickel(II)-Ethylenediamine System

10.1 Introduction	179
10.2 Experimental	180
10.3 Calculation of the Formation Function, $\bar{n}$, and Free Ligand Concentration, $[en]$	180

Table of Contents

9

(i) Theory	180
(ii) Results	183
(a) Determination of the protonation constants of ethylenediamine, K_4 and K_5	183
(b) Determination of the formation function, $\bar{n}$, and $p[en]$ for the nickel(II)-ethylenediamine system	185
10.4 Determination of the Stability Constants from $\bar{n}/p[en]$ data	185
(i) Determination of approximate values using the half $\bar{n}$ method	185
(ii) Refinement of approximate K_n values using Bjerrum's convergence method	187
(iii) Block and McIntyre's method	188
10.5 Summary	192
References	192

Chapter 11 SECOND CASE STUDY: Leden and Non-linear Treatment of Potentiometric Data; The Silver(I)-Allyl alcohol System

11.1 Introduction	193
11.2 Apparatus	193
11.3 Readings	195
11.4 Calculations	195
(i) Simple Leden Method	196
(ii) Least-squares straight line	199
(iii) Weighting of the data points	202
11.5 Use of a Non-linear Least-squares Program	204
11.6 Conclusion	206
References	206

Chapter 12 THIRD CASE STUDY: Qualitative and Quantitative Analysis of Spectrophotometric Data; The Copper(II)-Ethylenediamine-Oxalate System

12.1 Introduction	207
12.2 Definition of the Equilibrium System	207
12.3 Experimental	213
12.4 Graphical Treatment of the Data	213
12.5 Graphical Determination of K_1	217
12.6 Graphical Determination of K_2	220
12.7 Estimation of Mole Fractions of the Copper(II) Complexes and Stability Constants from Isosbestic Point Data	222
12.8 Calculation using a Non-linear Least-squares Program	227
12.9 Summary	230
References	232

**Chapter 13 FOURTH CASE STUDY: Model Building and Testing
Using a Computer; The Sodium Tetrachloropalladate(II)-
Sodium Chloride System**

13.1 Introduction	233
13.2 Experimental Method	233
13.3 Building the Model: The Number of Absorbing Species in Solution	234
13.4 Building the Model: The Nature of the Species in Solution	236
13.5 Building the Model: Evaluation of the Stability Constants	237
(i) Initial estimates of the molar absorptivities of Na_2PdCl_4 and $\text{Na}_2\text{Pd}_2\text{Cl}_6$	237
(ii) Initial estimate of the stability constant K_1	240
(iii) Refinement of initial estimates	241
13.6 Testing the Model: Adjustment of Systematic Errors	242
13.7 Conclusion	247
References	247

**Chapter 14 THE INTERPRETATION OF STABILITY CONSTANT
DATA**

14.1 Introduction	249
14.2 Temperature Dependence of Thermodynamic Terms	250
14.3 Division of Thermodynamic Terms into Solvation and Bonding Components	251
(i) Solvation terms	251
(ii) Bonding terms	252
14.4 Ratio of Successive Stability Constants	253
14.5 Classification of Metals and Ligands	256
(i) Irving-Williams series	257
(ii) Class 'a' and class 'b' metals	256
(iii) Principle of hard and soft acids and bases	261
(iv) Other classification schemes	264
14.6 The Chelate Effect	267
(i) Enthalpy contributions to the chelate effect	267
(ii) Entropy contributions to the chelate effect	268
(iii) Summary of the chelate effect	270
14.7 The Macrocyclic or Super Chelate Effect	271
14.8 Summary	272
References	272

Chapter 15 THE APPLICATIONS OF STABILITY CONSTANTS

15.1 Introduction	275
15.2 Life	275

Table of Contents

11

(i) Sodium-potassium ion pump	278
(ii) Oxygen transport and storage.	280
15.3 Medicine	283
(i) Removal of unwanted metal ions	283
(ii) Medical research	287
15.4 Pollution	289
15.5 Electrochemistry	289
15.6 Analytical Chemistry	290
(i) Complexometric titrations	291
(ii) Metal-ion indicators	292
(iii) Colorimetric Analysis	293
(iv) Precipitation of metals.	295
(v) Extraction of metals	296
15.7 Geochemistry	299
15.8 Photography.	302
References	303
Appendix I Notes on Matrix Algebra	307
Appendix II TRIANG: A Computer Program for Determining the Number of Species in Solution	313
Appendix III DALSFEK: A Damped Non-linear Least-squares Computer Program for Calculating Stability Constants.	319
Index	347

Table of Contents

Preface	13
---------------	----

Chapter 1 FUNDAMENTAL CONCEPTS

1.1 Introduction	15
(i) Applications in other fields of chemistry	16
(ii) Applications to the theoretical understanding of inorganic chemistry	17
1.2 Systematic Investigation of Solution Chemistry	17
1.3 Complexes	17
(i) Inner and outer sphere complexes	18
(ii) Chelate complexes	18
(iii) Mononuclear and polynuclear complexes	18
1.4 Stability	19
1.5 Thermodynamic Stability Constants	20
1.6 Stoichiometric Stability Constants	23
1.7 Determination of Thermodynamic Stability Constants	24
1.8 Medium	26
1.9 Nature of the Background Electrolyte	27
1.10 Thermodynamic Functions	28
(i) Gibbs free energy	28
(ii) Enthalpy	28
(iii) Entropy	30
References	30

Chapter 2 THE NUMBER AND NATURE OF SPECIES IN SOLUTION

2.1 Introduction	33
2.2 The Number of Species in Solution	33
2.3 Graphical Methods for Determining the Number of Species in Solution	36
(i) Graphical procedure when no restraint is placed upon the stoichiometry of the solutions examined	36

(ii) Graphical procedure for restricted stoichiometries.	40
2.4 Computational Methods for Determining the Number of Species in Solution.	41
2.5 The Nature of Species in Solution	44
(i) Molar ratio method	44
(ii) Method of continuous variations (Job's method)	45
2.6 Conclusion.	51
References	51

Chapter 3 TREATMENT OF DATA: DERIVED FUNCTIONS

3.1 Introduction.	53
3.2 Secondary Concentration Variables.	54
(i) The complex formation function, $\bar{n}$	54
(ii) The degree of formation, α_c	56
(iii) The degree of complex formation, ϕ	57
3.3 Inter-relationships Between $\bar{n}$, α_c and ϕ	57
3.4 Stepwise Formation of Complexes	58
3.5 Influence of the Spreading Factor, x , on the Formation Function, $\bar{n}$	59
3.6 Calculation of Stability Constants Based on the Complex Formation Function, $\bar{n}$	61
(i) Graphical methods based on $\bar{n}$	64
(ii) Numerical methods based on $\bar{n}$	65
3.7 Calculation of Stability Constants based on the Degree of Complex Formation ϕ	67
(i) Leden's method	67
(ii) Froneaus' method	70
3.8 Comparison of the Various Methods of Calculating Stability Constants.	71
References	72

Chapter 4 TREATMENT OF DATA: LINEAR METHODS, ERRORS AND STATISTICS

4.1 Introduction.	73
4.2 Model Building	73
4.3 Random Errors	74
4.4 Systematic Errors	76
4.5 Linear Least-squares	78
4.6 Limitations of Linear Least-squares	80
4.7 Linear Least-squares — Generalised Matrix Approach	81
4.8 Hypothesis Testing	83
4.9 Geometry of Linear Least-squares — The Error Ellipse	84
References	86

Chapter 5 TREATMENT OF DATA: NON-LINEAR PARAMETER ESTIMATION

5.1 Introduction.	87
5.2 Limitations of Graphical Methods.	87
5.3 Least-squares — Extension to Non-linear Case.	88
5.4 Hypothesis Testing	89
5.5 Geometry of Non-linear Least-squares.	90
5.6 Ill-conditioning of the Normal Equations — Convergence	91
5.7 Non-linear Least-squares Algorithms.	93
5.8 Parameter Correlation	95
5.9 Weighting and Errors	96
5.10 Systematic Errors	98
5.11 Experimental Design	98
5.12 Available Non-linear Least-squares Programs for the Calculation of Stability Constants.	100
References	104

Chapter 6 INTRODUCTION TO THE EXPERIMENTAL DETERMINATION OF STABILITY CONSTANTS

6.1 Introduction.	107
6.2 Choice of Method	108
6.3 Use of More Than One Experimental Method	108
6.4 Study of Weak Complexes.	109
6.5 Study of Very Strong Complexes	111
6.6 Polynuclear Complexes.	112
6.7 Interaction of Metal Ions With Polyelectrolytes.	114
References	115

Chapter 7 EXPERIMENTAL METHODS FOR STUDYING EQUILIBRIA. I. Potentiometry

7.1 Introduction.	117
7.2 Measurement of Potential	118
7.3 Experimental Technique for Determining Stability Constants	123
7.4 Electrodes	123
7.5 Calibration of Electrodes	124
7.6 Calculation of Stability Constants from Potentiometric Data	128
(i) Free metal ion or free ligand data.	128
(ii) pH data.	129
(iii) Use of competing metal ions	130
References	130

Chapter 8 EXPERIMENTAL METHODS FOR STUDYING EQUILIBRIA. II. Ultraviolet and Visible Spectrophotometry

8.1 Introduction	133
----------------------------	-----

8.2 Beer-Lambert-Bouguer Law	133
8.3 Measurement of Absorbance	135
8.4 Calculation of Stability Constants from Spectrophotometric Data	136
8.5 Method of Corresponding Solutions	137
References	144

Chapter 9 EXPERIMENTAL METHODS FOR STUDYING

EQUILIBRIA. III. Further Methods

9.1 Introduction	147
9.2 Spectroscopic Methods	147
(i) Infrared	147
(ii) Raman	148
(iii) Nuclear magnetic resonance	149
(iv) Electron spin resonance	153
(v) Mössbauer	155
(vi) Refractometry	155
(vii) Spectropolarimetry	156
(viii) Light scattering	157
(ix) Ultrasonic absorption	157
9.3 Distribution Methods	157
(i) Liquid-liquid partition (solvent extraction)	158
(ii) Solubility	159
(iii) Ion-exchange	160
(iv) Gas chromatography	162
(v) Liquid chromatography	164
(vi) Thin layer and paper chromatography	165
9.4 Electrochemical Methods	165
(i) Polarography	165
(ii) Anodic stripping voltammetry	167
(iii) Conductivity	167
(iv) Dielectric constant	168
9.5 Calorimetric Methods	168
(i) Direct calorimetry	169
(ii) Thermometric titration calorimetry	169
9.6 Miscellaneous Methods	172
References	172

Chapter 10 FIRST CASE STUDY: Linear ($\bar{n}$) Treatment of pH Data;

The Nickel(II)-Ethylenediamine System

10.1 Introduction	179
10.2 Experimental	180
10.3 Calculation of the Formation Function, $\bar{n}$, and Free Ligand Concentration, $[en]$	180
