# ABOUT THE AUTHOR

Paul Hodkinson is a sociologist whose work is focused upon youth cultures, online communications, contemporary fatherhood and the relationships between media and cultural identities. He is author of *Goth: Identity, Style and Subculture* and *Media, Culture and Society*. He is also co-editor of *Youth Cultures: Scenes, Subcultures and Tribes* (with Wolfgang Deike) and *Ageing and Youth Cultures* (with Andy Bennett). He has published a wide range of journal articles and book chapters across the range of his interests.

His most recent research projects have focused on ageing and youth cultures, experiences of targeted harassment among subcultural participants and fathers who are primary or equal carers for young children. He is based in the Department of Sociology at the University of Surrey where he teaches and supervises on media, music and youth cultures.

# ACKNOWLEDGEMENTS

Thanks to the Department of Sociology at the University of Surrey for providing me with a wonderful place to work for the last 13 years. Thanks, specifically, to colleagues at Surrey and elsewhere connected to research and teaching on media, culture and society, including those who have offered advice or thoughts related to sections of this book. Acknowledgement is also due to Graham McBeath, from whom I learned so much at the University of Northampton and, most of all, to all those who first inspired my interest in the study of media, culture and society when I was a student in the Department of Cultural Studies at the University of Birmingham.

Thanks also to the team at Sage Publications for all the help and support provided throughout the process of producing the second edition of this book. And thanks to my students, without whom my enthusiasm and understanding would be so much less. Finally, thanks to my partner, Holly Cummins, for her love, support and ever-entertaining proof-reading, and to my little boys, Laurie and Asher, for making life so entertaining even in the midst of the most frantic of writing and editing.

## INTRODUCTION

### FOCAL POINTS

- Introduction to the notions of media, culture and society
- The relationship between media representations and society
- Linear models of the communication process
- A suggested model of the elements of media in social context
- Summary of the chapters to follow

## INTRODUCTION

Perhaps more than ever before, media and communication are at the centre of everyday lives. At work, at home, in public spaces or while travelling from one location to another, we are rarely far away from mediated sounds, images or words, whether in the form of television, websites, magazines, mobile apps, newspapers, music or social media. On our own and in the company of others, media entertain us, enable connections with friends and communities, provide interpretations of the world around us and offer resources for the forging of identities and imaginations. And their importance to everyday lives and routines suggests that media also must have the most significant implications for the nature and character of the broader culture and society that surround us. We live, it may be argued, in a media culture, a media society. This book provides an introduction to the relationships between media and the broader social and cultural world in which they operate.

## MEDIA, CULTURE, SOCIETY

It is worth remembering that *media* is the plural of the term *medium*, which refers, essentially, to the means through which content is communicated between an origin and a destination. It could be argued that the human body acts as the first and most fundamental medium in this respect, transferring thoughts, ideas and emotions into speech or gestures audible or visible to others. Yet our concern here is with the use of artificial forms of media to enhance and extend our communicative capacity beyond the capabilities of our own bodies, transforming the range of expression open to us and mediating what we say over longer distances or to greater numbers of people, for example. At one extreme, such media may enable each of us to interact with friends or acquaintances without the need to be in the same room, city or even country, while on the other, they may enable a relatively small number of professional media producers to transmit large volumes of content to audiences of millions. Such producers, along with the technologies they utilise and content they distribute, are often collectively referred to as ‘the media’ and this certainly has become an acceptable use of the term. It remains important, however, to understand media as plural and diverse. Although contemporary large-scale ‘mass media’ figure heavily in our discussions, we’ll focus on a broad range of different types and scales of communication involving a plethora of organisations, communities and individuals. This is of particular importance in the context of a digital media age in which the interrelationships between traditional forms of mass media and a range of more interactive forms of communication have become pivotal.

Two connected senses of the word *culture* are of importance to our discussions in this book, both of which are identified in the influential writings of Raymond Williams (1988; 1989) on the subject. First, culture is sometimes used in a specific sense to refer to the worlds of creative expression or, as Williams puts it, ‘the works and practices of intellectual and especially artistic activity’ (1988: 90). Traditionally this sense of the term was reserved for elite or ‘high’ forms of literature, music, art and theatre, but increasingly its use also encapsulates the larger realm of so-called *popular culture*, including pop music and popular fiction or drama, for example. As Williams puts it, ‘culture is ordinary’ (1989: 3). At certain points, we’ll use the term culture in this more restricted sense, including as a means to refer to mediated forms and practices of expression.
