About the Author

Rodolfo Giometti is an engineer, IT specialist, GNU/Linux expert and software libre evangelist.

Author of the books *BeagleBone Essentials* and *BeagleBone Home Automation Blueprints* by *Packt Publishing* and maintainer of the LinuxPPS projects (the Linux's Pulse Per Second subsystem) he still actively contributes to the Linux source code with several patches and new device drivers for industrial applications devices.

During his twenty-year+ experience, he, worked with x86, ARM, MIPS, & PowerPC-based platform.

Now, Rodolfo is the Co-Chief at HCE Engineering S.r.l. and he is the Co-Founder of the Cosino Project, which involves new hardware and software systems for the quick prototyping in industry environment, control automation, and remote monitoring.

I would like to thank my wife, Valentina, and my children, Romina and Raffaele, for their patience during the writing of this book. I also give deep thanks and gratitude to the Packt's guys Vivek Anantharaman, who gave to me the opportunity to write this book, and Rashmi Suvarna and Juliana Nair, who supported me in finishing this book (specially to Juliana Nair who spent her nights in editing the book's layout). Many thanks to Luca Zulberti, and Chris Simmonds for their support and effort in reviewing this book so carefully (specially to Luca Zulberti who so carefully re-checked my English, the code, and all circuitries). Also, a big thanks to Mohd Riyan Khan for his patience in adding all my modifications to the final review of this book.

Finally, I cannot forget to thank my parents. Giving me my first computer when I was a child, allowed me to be doing what I do today.

About the Reviewer

Luca Zulberti has obtained a diploma in 2015 in Electronics at ITIS G. Galilei in Livorno, Italy. He is continuing his studies at the University of Pisa in Electronic Engineering class.

In his spare time, he studies several programming techniques and languages. He has fun with several embedded systems and he's interested in Embedded OS development and GNU/Linux programming.

He's member of the Cosino Project on which he writes some articles and projects.

For support files and downloads related to your book, please visit `www.PacktPub.com`.

Did you know that Packt offers eBook versions of every book published, with PDF and ePub files available? You can upgrade to the eBook version at `www.PacktPub.com` and as a print book customer, you are entitled to a discount on the eBook copy. Get in touch with us at `service@packtpub.com` for more details.

At `www.PacktPub.com`, you can also read a collection of free technical articles, sign up for a range of free newsletters and receive exclusive discounts and offers on Packt books and eBooks.

`https://www.packtpub.com/mapt`

Get the most in-demand software skills with Mapt. Mapt gives you full access to all Packt books and video courses, as well as industry-leading tools to help you plan your personal development and advance your career.

Why subscribe?

- Fully searchable across every book published by Packt
- Copy and paste, print, and bookmark content
- On demand and accessible via a web browser

Customer Feedback

Thanks for purchasing this Packt book. At Packt, quality is at the heart of our editorial process. To help us improve, please leave us an honest review on this book's Amazon page at: `www.amazon.com/dp/ASIN/1786461803`.

If you'd like to join our team of regular reviewers, you can e-mail us at `customerreviews@packtpub.com`. We award our regular reviewers with free eBooks and videos in exchange for their valuable feedback. Help us be relentless in improving our products!

Table of Contents

Preface 1

Chapter 1: Installing the Developing System 17

Embedded world terms 18
Systems' overview 20
The BeagleBone Black 21
The SAMA5D3 Xplained 24
The Wandboard 28
Installing a development system 32
Setting up the host machine 33
Basic tools 33
The cross-compiler 34
Setting up the BeagleBone Black 36
Serial console for the BeagleBone Black 36
U-Boot (with MLO) 40
Linux kernel for the BeagleBone Black 44
Debian 8 (jessie) for the BeagleBone Black 48
Setting up the SAMA5D3 Xplained 50
Serial console for SAMA5D3 Xplained 51
U-Boot (with boot.bin) 52
Linux kernel for SAMA5D3 Xplained 54
Debian 8 (jessie) for SAMA5D3 Xplained 57
Setting up the Wandboard 59
Serial console for the Wandboard 59
U-Boot (with SPL) 60
Linux kernel for the Wandboard 62
Debian 8 (jessie) for the Wandboard 65
Setting up the developing system 67
BeagleBone Black – USB, networking, and overlays 67
SAMA5D3 Xplained – USB and networking 72
Wandboard – USB and networking (wired and wireless) 76
Common settings 80
Summary 80

Chapter 2: Managing the System Console 81

Basic OS management 81
File manipulation and Co 82
echo and cat 82

dd 84
grep and egrep 85
tr and sed 87
head and tail 89
od and hexdump 89
file 90
strings 91
strace 91
Package management 92
Searching a software package 92
Installing a package 94
apt-get and friends versus aptitude 95
The deb files 98
Managing the kernel messages 99
A quick tour into the bootloader 101
The environment 103
Managing the storage devices 105
MMC 106
Managing the flash 109
GPIO management 112
Accessing an I2C device 113
Loading files from the network 114
The kernel command line 119
Summary 121
Chapter 3: C Compiler, Device Drivers, and Useful Developing Techniques 123
The C compiler 124
Native and foreign machine architecture 124
Compiling a C program 127
The native compilation 128
The cross-compilation 132
Compiling a kernel module 134
The Kernel and DTS files 137
Recompiling the kernel 138
The device tree 142
What is a device driver? 145
Char, block, and net devices 147
Modules versus built-in devices 148
The modutils 149
Writing our own device driver 150
The root filesystem (rootfs) 163
The /dev directory 164

试读结束，需要全本PDF请购买 www.ertongbook.com

The tmpfs 167
The procfs 167
The sysfs 172
The Network FileSystem (NFS) 175
Exporting an NFS on the host 176
Setting up the kernel to mount an NFS 178
U-Boot and the kernel command line to use a NFS 180
Developing into an NFS 184
Using an emulator 185
Executing a program 186
Entering into an ARM rootfs tree 187
Summary 191
Chapter 4: Quick Programming with Scripts and System Daemons 193
Setting up the system 194
System daemons 195
Useful and ready-to-use daemons 196
System daemons management 197
syslogd 200
syslogd in Bash 202
syslogd in C 202
syslogd in PHP 202
syslogd in Python 203
cron 203
xinetd 205
sshd 209
Apache 211
MySQL 214
MySQL in Bash 214
MySQL in C 217
MySQL in PHP 219
MySQL in Python 221
Scripting languages 222
Managing a LED in PHP 224
The LAMP solution 224
The built-in server solution 227
Managing a LED in Python 228
Managing a LED in Bash 231
Writing a custom daemon 236
A daemon in C 237
A daemon in PHP 238
A daemon in Python 240
A daemon in Bash 241

Summary 242

Chapter 5: Setting Up an Embedded OS 243

MTD versus block devices 244
What is an MTD device? 244
Managing an MTD device 247
Filesystems for flash memories 251
JFFS2 versus UBIFS 252
Building a JFFS2 filesystem 253
Building a UBIFS filesystem 257
OpenWrt 265
Using the default configuration 265
Adding a (quasi) LAMP system 276
Adding a custom package 288
Yocto 293
Using the default recipe 294
Adding the graphic support 306
Adding a custom recipe 309
Summary 313

Chapter 6: General Purposes Input Output signals – GPIO 315

What is a GPIO line? 316
GPIOs lines on the BeagleBone Black 319
GPIOs on the SAMA5D3 Xplained 319
GPIOs on the Wandboard 321
GPIOs in Linux 321
Getting access to GPIOs 324
Bash 325
C 328
Using GPIOs with scripting languages 337
PHP 338
Python 339
Managing GPIO into the kernel 341
An input device using GPIOs 342
LEDs and triggers 351
Summary 355

Chapter 7: Serial Ports and TTY Devices - TTY 357

What are TTY, serial, and UART lines? 358
The electrical lines 359
TTYs on the BeagleBone Black 360

TTYs on the SAMA5D3 Xplained 362
TTYs on the Wandboard 364
Implementations of serial ports 364
The serial ports in Linux 366
The communication parameters 366
Getting access to TTYs 367
Distance sensor 369
RFID LF reader 375
Managing TTY in the kernel with SLIP 378
Summary 384
Chapter 8: Universal Serial Bus - USB 385
What is the universal serial bus? 385
The electrical lines 387
USB ports on the BeagleBone Black 387
USB ports on the SAMA5D3 Xplained 387
USB ports on the Wandboard 387
The USB bus in Linux 388
Acting as a host 389
Acting as a device 394
The Multi gadget 397
The configfs gadget 400
The USB tools 407
The raw USB bus 410
Accessing as a host 410
Summary 415
Chapter 9: Inter-Integrated Circuits - I2C 417
What is the Inter-Integrated Circuit bus? 417
The electrical lines 418
I2C ports on the SAMA5D3 Xplained 421
I2C ports on the Wandboard 422
The I2C bus in Linux 423
The I2C tools 424
Getting access to I2C devices 425
EEPROM, ADC and IO Expander 426
EEPROM 429
ADC 432
IO Expander 434
The temperature/humidity and pressure sensors 437
Serial port 443

The Raw I2C Bus 447
Writing data in C 447
Reading data in Python 451
Summary 455
Chapter 10: Serial Peripheral Interface - SPI 457
What is the Serial Peripheral Interface bus? 457
The electrical lines 459
SPI ports on the BeagleBone Black 459
SPI ports on the SAMA5D3 Xplained 463
SPI ports on the Wandboard 465
The SPI bus in Linux 466
The SPI tools 467
Getting access to SPI devices 469
LCD display 469
Serial port 474
The raw SPI bus 477
Exchanging data in C 477
Exchanging data in Python 480
Summary 487
Chapter 11: 1-Wire - W1 489
What is the 1-Wire Bus? 489
The electrical lines 491
1-Wire ports on the BeagleBone Black 492
1-Wire ports on the SAMA5D3 Xplained 494
1-Wire ports on the Wandboard 494
The 1-Wire bus in Linux 494
Getting access to 1-Wire devices 496
Using the GPIO interface 496
Using an external controller 500
Summary 503
Chapter 12: Ethernet Network Device - ETH 505
What is an Ethernet network device? 505
Electrical lines 506
Ethernet port on the BeagleBone Black 507
Ethernet ports on the SAMA5D3 Xplained 508
Ethernet port on the Wandboard 508
The Ethernet devices in Linux 508
The net tools 510

Communicating with a remote device 512
A simple TCP client/server application 512
Using ready-to-use networking tools 515
The raw Ethernet bus 516
Simple Ethernet bridging 516
Summary 518
Chapter 13: Wireless Network Device - WLAN 519
What is a wireless network device? 519
The electrical lines 520
WLAN device on the BeagleBone Black 521
WLAN device on the SAMA5D3 Xplained 521
WLAN device on the Wandboard 522
WLAN devices in Linux 522
Pluggable external WLAN devices 522
The Wi-Fi operation modes 525
The wireless tools 525
The WPA supplicant 530
The Hostapd daemon 532
Summary 538
Chapter 14: Controller Area Network - CAN 539
What is the CAN bus? 539
The electrical lines 540
CAN ports on the BeagleBone Black 542
CAN ports on the SAMA5D3 Xplained 544
CAN ports on the Wandboard 544
The CAN bus in Linux 544
The can-utils package 546
The raw CAN bus 548
Exchanging data via the CAN bus 551
Using the on-board controller 551
Using an external controller 554
Summary 559
Chapter 15: Sound Devices - SND 561
What is a sound device? 561
The electrical lines 565
Sound on the BeagleBone Black 566
Sound on the SAMA5D3 Xplained 566
Sound on the Wandboard 567

Sound in Linux 568
The audio tools 573
The ALSA utils 573
Madplay 579
Mplayer 581
Sox 582
The USB audio device class 589
Managing sound devices 591
Adding an audio codec 591
A simple oscilloscope 597
Summary 602
Chapter 16: Video devices - V4L 603
What is a video device? 603
The electrical lines 607
Video on the BeagleBone Black 608
Video on the SAMA5D3 Xplained 608
Video on the Wandboard 609
Video in Linux 610
The video tools 610
The USB video class device 614
Managing video devices 619
Streaming video over the Web 619
Capturing motion 624
Summary 633
Chapter 17: Analog-to-Digital Converters - ADC 635
What is an analog-to-digital converter device? 635
The electrical lines 637
ADCs on the BeagleBone Black 638
ADCs on the SAMA5D3 Xplained 639
ADCs on the Wandboard 639
ADCs in Linux 639
Detecting a gas 646
Summary 652
Chapter 18: Pulse-Width Modulation - PWM 653
What is a PWM device? 654
The electrical lines 655
PWMs on the BeagleBone Black 655
PWMs on the SAMA5D3 Xplained 656
