DEVELOPMENTS IN FOOD SCIENCE 6

TESTING METHODS IN FOOD MICROBIOLOGY

Edited by

ISTVÁN KISS

*Central Food Research
Institute
Budapest, Hungary*

ELSEVIER

Amsterdam-Oxford-New York-Tokyo 1984

This book is the revised version of
MIKROBIOLÓGIAI VIZSGÁLATI MÓDSZEREK AZ ÉLELMISZERIPARBAN

1. Mennyiségi vizsgálatok
and

2. Minőségi vizsgálatok (a mikroorganizmusok kimutatása)
Mezőgazdasági Kiadó, Budapest 1977 and 1978

Translated by E. FARKAS

English text revised by K. VAS

Translation Editor: Mark COWAN

Contributors: J. FARKAS, K. INCZE, I. KISS, L. ORMAY, G. PULAY, J. TAKÁCS, J. VÖRÖS,
E. ZUKÁL

Joint edition published by

Elsevier Science Publishers, Amsterdam, The Netherlands and Akadémiai Kiadó, the Publishing House
of the Hungarian Academy of Sciences, Budapest, Hungary

The distribution of this book is being handled by the following publishers

for the U.S.A. and Canada

Elsevier Science Publishing Co., Inc.
52 Vanderbilt Avenue
New York, New York 10017, U.S.A.

for the East European countries, Korean People's Republic, Cuba, People's Republic of Vietnam and
Mongolia

Kultura Hungarian Foreign Trading Co. P.O. Box 149 H-1389 Budapest 62, Hungary

CONTENTS

Foreword	19
1. The microbiological laboratory (J. Farkas)	21
1.1 Laboratory design and equipment	21
1.1.1 Placing and illumination	21
1.1.2 Ventilation	21
1.1.3 The arrangement of the laboratory	21
1.1.4 The basic equipment	23
1.1.5 Apparatus and instruments commonly used in microbiological laboratories	24
1.1.5.1 Glassware for storage of media and cultivation of microorganisms	24
1.1.5.2 Inoculating devices	26
1.1.5.3 Disposable presterilized equipment	27
1.2 Portable microbiological units and mobile microbiological laboratories	27
2. Microbiological procedures (J. Farkas)	28
2.1 Sterilization, cleaning and disinfection	28
2.1.1 Sterilization by dry heat	28
2.1.1.1 Heating to redness	28
2.1.1.2 Flaming	28
2.1.1.3 Sterilization by dry heat	28
2.1.2 Sterilization by moist heat	29
2.1.2.1 Sterilization in flowing steam at atmospheric pressure ...	30
2.1.2.2 Sterilization by moist heat above atmospheric pressure ...	30
2.1.2.3 Apparatus for steam treatment in the laboratory	30
2.1.2.3.A Steam sterilizers ("steamers")	30
2.1.2.3.B Autoclaves	31
2.1.2.4 Indicators of the effect of heat treatment	33

2.1.3	Irradiation	34
2.1.4	Sterilization using gases	34
2.1.4.1	Sterilization with ethylene oxide	34
2.1.4.2	Sterilization with formalin vapour	35
2.1.5	Sterilization by filtration	35
2.1.5.1	Filtration of air and other gases	35
2.1.5.2	Filtration of liquids	36
2.1.6	Cleaning and disinfection	36
2.1.6.1	Cleaning	36
2.1.6.2	Disinfectants	37
2.2	Preparation and storage of culture media	38
2.2.1	Requirements relating to the composition of media	38
2.2.2	Commercial media	40
2.2.3	Distribution of media	40
2.2.4	Storage	41
2.3	Sampling, sample-storage and -processing	42
2.3.1	Aspects of sampling	42
2.3.2	Sampling and sampling instruments	43
2.3.3	Transport and storage of samples	43
2.3.4	Processing of samples	43
2.3.4.1	Homogenization	43
2.3.4.2	Preparation of serial dilutions	45
2.3.4.2.A	Dilution errors	47
2.4	The use of the microscope	47
2.4.1	The construction of the light microscope	48
2.4.2	Resolving power and numerical aperture	49
2.4.3	Increasing the resolving power by use of the immersion objective	50
2.4.4	Illuminating systems	51
2.4.4.1	Köhler illumination	51
2.4.4.2	Bright field microscopy	51
2.4.4.3	Oblique illumination and dark field microscopy	52
2.4.4.4	Interference microscopy and phase-contrast microscopy ..	52
2.4.4.5	Fluorescence microscopy	54
2.5	Isolation, enrichment, cultivation and maintenance of strains	54
2.5.1	Methods of isolation	54
2.5.1.1	Plate cultures	54
2.5.1.1.A	Isolation by surface streaking	55
2.5.1.1.B	Pour plates	56
2.5.1.1.C	Preparation of pure cultures	57
2.5.1.2	Isolation techniques based on single-cell culture	57

2.5.1.2.A	Hansen's technique	57
2.5.1.2.B	Lindner's technique	58
2.5.2	Enrichment procedures and the use of elective and selective culture media	59
2.5.3	Methods of culturing	59
2.5.3.1	Aerobic cultivation	59
2.5.3.2	Anaerobic cultivation	60
2.5.3.2.A	Lowering the redox potential by excluding air	60
2.5.3.2.B	Lowering the redox potential with reductants	62
2.5.4	Storage of microbial cultures	63
2.6	Preparation for microscopy	64
2.6.1	Unfixed, unstained preparations	64
2.6.2	Vital staining	65
2.6.3	Fixed, stained preparations	65
2.6.4	Differential stains	66
2.6.4.1	Gram's stain	66
2.6.4.2	Ziehl-Neelsen's differential stain	67
2.6.4.3	Endospore stain	68
2.6.4.4	Capsule-staining procedures	68
2.6.4.5	Flagella staining	69
2.6.5	Determining size	69
2.6.5.1	Determining the size of microbial cells	69
2.6.5.2	Determination of the diameter of the field of view	71
2.7	Morphological characterization	72
2.7.1	The importance of morphological studies, and the problems of morphological evaluation	72
2.7.2	The morphology of bacteria	73
2.7.2.1	Microscopic characters	73
2.7.2.2	Characteristics of colony formation	77
2.7.3	The morphology of yeasts	82
2.7.3.1	The main morphological properties of yeasts	82
2.7.3.2	Microscopic examination of yeasts	86
2.7.3.3	Examination of the sporogenesis of yeasts	86
2.7.4	The morphology of mould fungi and methods of examination	86
2.7.4.1	The morphological structure of mould fungi	86
2.7.4.2	Methods of morphological examination of mould fungi	90
2.8	Biochemical procedures (I. Kiss, J. Takács, J. Vörös)	91
2.8.1	Liquefaction of gelatin	91
2.8.1.1	Nutrient gelatin	91
2.8.1.2	Frazier's gelatin agar (modified)	92
2.8.2	Hydrolysis of casein	92

2.8.3	Hydrolysis of coagulated blood serum	93
2.8.4	Production of indole from tryptophane	93
2.8.5	Production of ammonia from peptone or arginine	93
2.8.5.1	Peptone water	93
2.8.5.2	Arginine broth	94
2.8.5.3	Thornley's semi-solid arginine medium	94
2.8.6	Production of hydrogen sulphide	94
2.8.6.1	Cystine or cysteine broth	94
2.8.6.2	Ferrous chloride gelatin	95
2.8.6.3	Nógrády and Rödler's modified double-layer polytropic medium	95
2.8.7	Reduction of nitrate	96
2.8.8	Litmus milk test	96
2.8.9	Lysine-decarboxylase test	96
2.8.10	Phenylalanine-deaminase test for the demonstration of phenylpyruvic acid	97
2.8.11	Demonstration of oxidizing and fermenting activity	97
2.8.12	The glucose test (Andrade's nutrient broth)	97
2.8.13	Lactose fermentation	98
2.8.14	Production of carbon dioxide from glucose	98
2.8.15	Methyl red test	98
2.8.16	Voges-Proskauer test	99
2.8.17	Hydrolysis of starch	99
2.8.18	Utilization of citrate as the sole carbon source	99
2.8.19	Production of polysaccharide from sucrose	100
2.8.20	Test for acid tolerance	100
2.8.21	Detection of butyric acid, propionic acid and acetic acid in culture media	100
2.8.22	Decomposition of organic acid substrates	100
2.8.23	Hydrolysis of tributyrin	101
2.8.24	Hydrolysis (lipolysis) of butter-fat, olive oil and margarine	101
2.8.24.1	Butter-fat agar and olive-oil agar	101
2.8.24.2	Victoria-blue (or olive-oil) agar	102
2.8.24.3	Victoria-blue margarine agar	102
2.8.25	Hydrolysis of Tween derivatives	102
2.8.26	Hydrolysis of lecithin	102
2.8.26.1	Egg-yolk agar	102
2.8.26.2	Egg-yolk broth	103
2.8.27	Urease test	103
2.8.28	Catalase test	103
2.8.29	Oxidase test	103
2.8.30	Coagulase test	104

2.8.30.1	Tube method	104
2.8.30.2	Slide test	104
2.8.31	Phosphates test	104
2.8.32	ONGP (beta-galactosidase) test	105
2.8.33	Test for haemolysis	105
2.8.34	Test for motility	106
2.8.35	Growth in a medium containing potassium cyanide (KCN)	106
2.8.36	Gram stain	106
2.8.37	Demonstration of pigments	106
2.8.38	Dalmau's plate for the examination of mycelium, pseudo-mycelium and chlamydospore formation by yeasts	107
2.8.39	Examination of spore formation in yeasts	107
2.8.40	Yeast spore stain	107
2.8.41	Test for sugar fermentation by yeasts	107
2.8.42	Test for sugar assimilation by yeasts (an auxanographic method)	108
2.8.43	Test for nitrogen assimilation by yeasts (an auxanographic method)	108
3.	Principles of sampling for microbiological grading (E. Zukál)	109
3.1	Mathematical-statistical principles of sampling	109
3.1.1	Definitions	110
3.1.2	Grading categories, operating characteristic curve (OC) ..	111
3.1.3	Grading based on attributes and variable measurements ..	113
3.1.4	Three-class grading	115
3.1.5	Selection of samples	116
3.2	The aim of grading	117
3.2.1	Grading of populations	118
3.2.1.1	Pathogenic micro-organisms	118
3.2.1.2	Micro-organisms causing spoilage	121
3.2.1.3	Indicator micro-organisms and indices	121
3.2.2	Problems of sampling for production control	122
3.2.2.1	Control-chart control	122
3.2.2.2	Special traits of the different phases of processing	123
4.	Description and identification of micro-organisms occurring in foodstuffs	125
4.1	The taxonomy of bacteria (I. Kiss)	125
4.2	Key to the identification of yeasts (J. Vörös)	134
4.3	Key to the identification of moulds	136

5.	Techniques for quantitative determination of micro-organisms (I. Kiss)	141
5.1	Total count of cell mass	141
5.1.1	Microscopic methods	141
5.1.1.1	Counting-chamber methods	141
5.1.1.1.A	The Thoma chamber	141
5.1.1.1.B	The Buerker chamber	142
5.1.1.1.C	The Helber-Glynn, Petroff-Hauser and Helber chambers	143
5.1.1.1.D	Slide chamber	143
5.1.1.2	Accuracy of counting	145
5.1.1.3	Stained preparations	147
5.1.2	Electronic particle counting	147
5.1.3	Measurement of cell mass	149
5.1.3.1	Optical methods	149
5.1.3.1.A	Turbidimetric methods	149
5.1.3.2	Gravimetry	150
5.1.3.3	Chemical methods	152
5.1.3.3.A	Protein assay	152
5.1.3.3.B	Determination of dry material content of cells	153
5.2	Determination of total microbial count (cultivation methods)	153
5.2.1	The dilution technique and the dilution tube count	154
5.2.2	Colony-counting methods	163
5.2.2.1	Counting in Petri dish culture	163
5.2.2.1.A	Pour-plate method	164
5.2.2.1.B	Surface counts	164
5.2.2.1.C	Enumeration of colonies	166
5.2.2.2	The membrane-filtration technique	168
5.2.2.3	The roll-tube procedure	170
5.2.2.4	The tube-plate method	172
5.2.2.5	Deep agar culture	172
5.2.2.6	The miniature plate method	173
5.2.2.7	Other methods of microcolony counting	174
5.2.2.8	Burri's procedure	175
5.2.2.9	The Bacto strip method	177
5.2.3	Comparative evaluation of the dilution and colony-counting methods	178
5.3	Determination of cell count by measuring biochemical activity	178

6.	Description and identification of some important micro-organisms occurring in foodstuffs	180
6.1	Pathogenic and toxin-producing microbes (J. Takács)	180
6.2	Micro-organisms causing food spoilage (J. Farkas)	184
6.3	Bacteria	190
6.3.1	Enterobacteriaceae (J. Takács)	190
6.3.1.1	Criteria of classification	190
6.3.1.2	Tribes, genera and species	190
6.3.1.3	Enumeration of Enterobacteriaceae	196
6.3.1.3.A	Determination of the Enterobacteriaceae count by the dilution technique	197
6.3.1.3.B	Colony counting	197
6.3.1.3.C	Calculation of the Enterobacteriaceae count	197
6.3.1.4	<i>Salmonella</i>	198
6.3.1.4.A	Cultivation	199
6.3.1.4.A.a	Direct inoculation	199
6.3.1.4.A.b	Pre-enrichment	199
6.3.1.4.A.c	Selective enrichment	200
6.3.1.4.A.d	Subculturing from selective enrichment media	200
6.3.1.4.B	Identification in the health control laboratory	201
6.3.1.4.B.a	Obligatory biochemical tests	201
6.3.1.4.B.b	Slide agglutination with <i>Salmonella</i> O polyvalent screening serum	201
6.3.1.4.B.c	Vi agglutination on slide	202
6.3.1.4.B.d	Biochemical confirmation of the salmonella strains in polyvalent O serum	203
6.3.1.4.B.e	O ₁ phage test	204
6.3.1.4.C	Examination in the reference laboratory	205
6.3.1.4.D	Methods of examination	206
6.3.1.4.D.a	Direct inoculation onto selective media	206
6.3.1.4.D.b	Pre-enrichment	206
6.3.1.4.D.c	Selective enrichment	207
6.3.1.5	Isolation of <i>E. coli</i> I and coliform bacteria	209
6.3.1.5.A	Coli count and titre	209
6.3.1.5.B	Eijkman's fermentation test	210
6.3.1.5.C	Differentiation between <i>E. coli</i> I and coliforms	211
6.3.2	Clostridia (J. Takács)	212
6.3.2.1	<i>Clostridium botulinum</i>	212
6.3.2.1.A	Food poisoning by <i>C. botulinum</i>	212
6.3.2.1.B	Isolation of <i>C. botulinum</i> and detection of toxin production	214
6.3.2.1.C	Cultivation of <i>C. botulinum</i> types A, B and E, and the demonstration of toxin production by the isolate	215

6.3.2.1.D	The detection of botulinum toxin in food	216
6.3.2.1.E	Detection of botulinum toxin in blood serum	218
6.3.2.2	<i>Clostridium perfringens</i>	219
6.3.2.2.A	Isolation procedure	220
6.3.2.2.B	Verification of the presence of <i>C. perfringens</i>	220
6.3.2.2.C	Enumeration of <i>C. perfringens</i>	220
6.3.2.2.D	Methods of anaerobic cultivation in the diagnosis of <i>C. perfringens</i>	221
6.3.2.2.E	Biochemical tests necessary for the diagnosis of <i>C. perfringens</i>	222
6.3.2.2.F	Enumeration of mesophilic clostridia and determination of their titre in sulphite-reduction medium	222
6.3.3	Detection and identification of <i>Staphylococcus aureus</i> (L. Ormay)	223
6.3.3.1	General characterization of the bacterium	223
6.3.3.1.A	The coagulase test	225
6.3.3.1.B	Detection of heat-stable DNase	227
6.3.3.1.C	Haemolysis	227
6.3.3.1.D	Microscopic characteristics	228
6.3.3.1.E	Morphological characteristics of colonies growing on plates	229
6.3.3.1.E.a	Morphological characteristics of <i>S. aureus</i> colonies on selective and differential media	230
6.3.3.2	Detection and enumeration of <i>S. aureus</i>	230
6.3.3.2.A	Routine test for the presence of <i>S. aureus</i> (PA test)	231
6.3.3.2.B	Reference test for the presence or exclusion of <i>S. aureus</i> ..	232
6.3.3.2.C	Routine titration of <i>S. aureus</i>	232
6.3.3.2.D	Reference test for the MPN if a bacterial count less than $10^3 \text{ g}^{-1} (\text{ml}^{-1})$ is expected	233
6.3.3.2.E	Routine method for obtaining the <i>S. aureus</i> count if the latter is expected to be more than $10^3 \text{ g}^{-1} (\text{ml}^{-1})$	234
6.3.3.2.F	Reference method for obtaining the <i>S. aureus</i> count if the latter is expected to be higher than $10^3 \text{ g}^{-1} (\text{ml}^{-1})$	234
6.3.3.3	Addendum	235
6.3.4	Detection and identification of <i>Streptococcus faecalis</i> , and of group D streptococci (L. Ormay)	236
6.3.4.1	General characterization of the microbes	236
6.3.4.2	Procedures followed if the presence of <i>S. faecalis</i> is expected	238
6.3.4.3	Target tests for <i>S. faecalis</i> (and group-D streptococci) ...	240
6.3.5	Detection and identification of <i>B. cereus</i> (L. Ormay)	241
6.3.5.1	General characterization of the bacterium	241
6.3.5.2	Procedures followed if the presence of <i>B. cereus</i> is suspected	244
6.3.5.3	Target testing for <i>B. cereus</i>	244

6.3.6	Detection and identification of <i>Pseudomonas aeruginosa</i> (L. Ormay)	245
6.3.6.1	General characteristics	245
6.3.6.2	Procedures followed if the presence of <i>P. aeruginosa</i> is suspected	247
6.3.6.3	Target examinations for <i>P. aeruginosa</i>	249
6.4	Yeasts (J. Vörös)	250
6.4.1	<i>Debaryomyces</i> Lodder et Kreger-van Rij	250
6.4.1.1	<i>Debaryomyces hansenii</i> (Zopf) Lodder et Kreger-van Rij ..	250
6.4.2	<i>Hansenula</i> H. et P. Sydow	251
6.4.2.1	<i>Hansenula anomala</i> (Hansen) H. et P. Sydow	251
6.4.3	<i>Kluyveromyces</i> Van der Walt emend. Van der Walt	252
6.4.3.1	<i>Kluyveromyces fragilis</i> (Jørgensen) Van der Walt	252
6.4.3.2	<i>Kluyveromyces lactis</i> (Dombrowski) Van der Walt	252
6.4.4	<i>Metschnikowia</i> Kamienski	253
6.4.4.1	<i>Metschnikowia pulcherrima</i> Pitt et Miller	253
6.4.5	<i>Pichia</i> Hansen	254
6.4.5.1	<i>Pichia membranaefaciens</i> Hansen	254
6.4.6	<i>Saccharomyces</i> Meyen emend. Reess	255
6.4.6.1	<i>Saccharomyces bayanus</i> Saccardo	255
6.4.6.2	<i>Saccharomyces bisporus</i> (Naganishi) Lodder et Kreger-van Rij	255
6.4.6.3	<i>Saccharomyces cerevisiae</i> Hansen	256
6.4.6.4	<i>Saccharomyces rouxii</i> Boulton	256
6.4.6.5	<i>Saccharomyces uvarum</i> Beijerinck	257
6.4.7	<i>Candida</i> Berkhout	257
6.4.7.1	<i>Candida kefyr</i> (Beijerinck) van Uden et Buckley	258
6.4.7.2	<i>Candida krusei</i> (Cast.) Berkhout	258
6.4.7.3	<i>Candida lipolytica</i> (Harrison) Diddens et Lodder	259
6.4.7.4	<i>Candida utilis</i> (Henneberg) Lodder et Kreger-van Rij	259
6.4.7.5	<i>Candida valida</i> (Leberle) van Uden et Buckley	259
6.4.8	<i>Torulopsis</i> Berlese	260
6.4.9	<i>Trichosporon</i> Behrend	260
6.4.10	<i>Brettanomyces</i> Kufferath et van Laer	260
6.4.11	<i>Kloeckera</i> Janke	261
6.4.11.1	<i>Kloeckera apiculata</i> [Reess emend. Klöcker] Janke	261
6.4.12	<i>Rhodotorula</i> Harrison	261
6.4.12.1	<i>Rhodotorula glutinis</i> (Fresenius) Harrison	263
6.5	Moulds (J. Vörös)	263
6.5.1	<i>Mucor</i> Micheli	263
6.5.1.1	<i>Mucor mucedo</i> (L.) Fresenius	263
6.5.1.2	<i>Mucor racemosus</i> Fresenius	264

6.5.1.3	<i>Mucor rouxianus</i> (Calmette) Wehmer	264
6.5.2	<i>Rhizopus</i> Ehrenberg	264
6.5.2.1	<i>Rhizopus oryzae</i> Went et Prinsen	264
6.5.2.2	<i>Rhizopus stolonifer</i> (Ehrenberg ex Fries) Lind.	264
6.5.3	<i>Thamnidium</i> Link	265
6.5.3.1	<i>Thamnidium elegans</i> Link ex Wallr.	265
6.5.4	<i>Byssoschlamys</i> Westling	265
6.5.4.1	<i>Byssoschlamys fulva</i> Olliver et Smith	265
6.5.5	<i>Neurospora</i> Shaer et Dodge	266
6.5.5.1	<i>Neurospora sitophila</i> Shaer et Dodge	266
6.5.6	<i>Trichothecium</i> Link	266
6.5.6.1	<i>Trichothecium roseum</i> Link	267
6.5.7	<i>Geotrichum</i> Link	267
6.5.7.1	<i>Geotrichum candidum</i> Link	267
6.5.8	<i>Sporotrichum</i> Link	267
6.5.9	<i>Aureobasidium</i> Viala et Boyer	267
6.5.9.1	<i>Aureobasidium pullulans</i> (de Bary) Arnaud	268
6.5.10	<i>Cladosporium</i> Link	268
6.5.10.1	<i>Cladosporium herbarum</i> (Persoon) Link	268
