## EFFECTIVE ABSORBED ENERGIES

Abstract: *This report provides the "effective absorbed energies" for 14 radionuclides commonly used in nuclear medicine.*

The average radiation dose,  $\bar{D}$ , to the whole body or a specific organ from a radionuclide in the body may be calculated by using the equations suggested by the Society of Nuclear Medicine's Internal Radiation Dose (MIRD) Committee (1):

$$\bar{D}(t \leftarrow s) = \frac{\tilde{A}_s}{m_t} \sum \Delta_i \phi_i(t \leftarrow s)$$

where  $\tilde{A}$  = cumulated activity ( $\mu\text{Ci-hr}$ )  
 $m$  = mass (g)

$\Delta$  = equilibrium dose constant for type  $i$  radiation (g-rad/ Ci-hr)  
 $\phi$  = absorbed fraction for type  $i$  radiation

subscript  $t$  -- indicates target organ

subscript  $s$  -- indicates source organ

The summed terms,  $\sum \Delta_i \phi_i(t \leftarrow s)$  are called the "effective absorbed energy" and have a specific value for each radionuclide and target-source combination. We have calculated this value for 14 radionuclides commonly used in nuclear medicine (Table 1) by using several target-source organ combinations. The organs were selected because of their tendency to contain high concentrations of the radionuclide or their radiosensitivity. The equilibrium dose constant ( $\Delta$ ) was obtained for each radiation from either MIRD pamphlet No. 4 or No. 6 (3, 4). Most values of  $\phi$  for penetrating radiation were obtained by interpolating tabulated values prepared by the MIRD Committee (2). When absorbed fractions were not available, we calculated the value by using the reciprocity principle which states that the ratio of absorbed fractions is equal to the ratio of the organ masses:

$$\frac{\phi(t \leftarrow s)}{\phi(s \leftarrow t)} = \frac{m_t}{m_s}$$

Tables 2-15 provide the "effective absorbed fraction" for the 14 radionuclides listed in Table 1.

subscript i -- indicates target organ  
subscript s -- indicates source organ

The summed terms,  $\sum_i \phi_{i \leftarrow s} \dot{V}_i$  (i.e.) are called the "effective absorbed energy" and have a specific value for each radionuclide and target-source combination. We have calculated this value for 14 radionuclides commonly used in nuclear medicine (Table 1) by using several target-source organ combinations. The organs were selected because of their tendency to contain high concentrations of the radionuclide or their radiosensitivity. The equilibrium dose constants (A) was obtained for each radiation from either MIRDPamphlet No. 4 or No. 5 (1, 2). Most values of  $\phi$  for penetrating radiation were obtained by integrating tabulated values prepared by the MIRDP Committee (3). When absorbed fractions were not available, we calculated the value by using the reciprocity principle which states that the ratio of absorbed fractions is equal to the ratio of the organ masses:

$$\frac{\phi_{j \leftarrow i}}{m_j} = \frac{\phi_{i \leftarrow j}}{m_i}$$

Tables 2-5 provide the "effective absorbed fraction" for the 14 radionuclides listed in Table 1.

TABLE I. RADIONUCLIDES

1. Calculated by the method of [reference]

2. The values are based on the assumption that the absorption coefficient is constant throughout the body.

3. The values are based on the assumption that the absorption coefficient is constant throughout the body.

4. The values are based on the assumption that the absorption coefficient is constant throughout the body.

| Skull      | 9.24E-4  | 2.36E-5    | 1.06E-5  | 2.81E-5  | 2.81E-5  | 3.12E-3  | —        | —        |
| Skeleton   | 1.95E-2  | 1.09E-2    | 1.39E-2  | 1.10E-2  | 1.10E-2  | 9.00E-2* | 1.49E-2  | 1.70E-2  |
| Ovaries    | 1.80E-5† | 4.60E-6†   | 7.00E-6† | 4.00E-6† | 4.00E-6† | 1.20E-5† | 5.37E-2* | —        |
| Testes     | 7.70E-5† | 1.00E-6†   | 1.90E-6† | 1.90E-6† | 1.90E-6† | 6.30E-5† | —        | 6.00E-2* |

The digits following the symbol E indicate the power of ten by which the number is to be multiplied.  
 Example: 2.31E-2 is equivalent to  $2.31 \times 10^{-2}$  or 0.0231.

\* Includes both penetrating and nonpenetrating radiation.

† Calculated by the reciprocity method.

The digits following the symbol E indicate the power of ten by which the number is to be multiplied.  
 Example: 2.31E-2 is equivalent to  $2.31 \times 10^{-2}$  or 0.0231.

\* Includes both penetrating and nonpenetrating radiation.

† Calculated by the reciprocity method.

TABLE 7. GALLIUM-67  
EFFECTIVE ABSORBED ENERGY

$$\sum \Delta_i \phi_i \left( \frac{\text{g-rad}}{\text{uCi-hr}} \right)$$

| Target     | Source     |          |
|------------|------------|----------|
|            | Total Body | Spleen   |
| Total Body | 2.12E-1*   | 2.40E-1* |
| Liver      | 4.42E-3    | 1.40E-1* |
| Spleen     | 3.93E-4    | 2.4 E-4  |
|            |            | 1.06E-1* |

The digits following the symbol E indicate the power of ten by which the number is to be multiplied. Example: 2.31E-2 is equivalent to 2.31 x 10<sup>-2</sup> or 0.0231.

\* Includes both penetrating and nonpenetrating radiation.

# TABLE 8. SELENIUM-75

## EFFECTIVE ABSORBED ENERGY $\Sigma \Delta_i \Phi_i$ ( $\frac{\text{g} \cdot \text{rad}}{\mu\text{Ci} \cdot \text{hr}}$ )

| Target     | Source | Total Body | Pancreas | Liver    | Kidney   | Ovaries  | Testes   |
|------------|--------|------------|----------|----------|----------|----------|----------|
| Total Body |        | 3.22E-1*   | 4.40E-1* | 3.81E-1* | 3.80E-1* | 4.52E-1* | 4.42E-1* |
| Pancreas   |        | 3.62E-4    | 7.43E-2* | 7.80E-4  | 1.19E-3  | 1.0 E-4  | —        |
| Liver      |        | 9.04E-3    | 2.24E-2  | 1.72E-1* | 2.00E-2  | 3.12E-3  | 2.5 E-4  |
| Kidney     |        | 1.39E-3    | 5.23E-3  | 3.23E-3  | 9.70E-2* | 8.3 E-4  | 8.3 E-5  |
| Ovaries    |        | 5.30E-5†   | 1.44E-5† | 1.49E-5† | 2.53E-5† | 5.74E-2* | —        |
| Testes     |        | 2.24E-4†   | —        | 5.10E-6† | 1.09E-5† | —        | 7.71E-2* |

The digits following the symbol E indicate the power of ten by which the number is to be multiplied. Example: 2.31E-2 is equivalent to  $2.31 \times 10^{-2}$  or 0.0231.

\* Includes both penetrating and nonpenetrating radiation.

† Calculated by the reciprocity method.

# TABLE 9. STRONTIUM - 85 EFFECTIVE ABSORBED ENERGY

$$\sum \Delta i \phi_i \left( \frac{g \cdot \text{rad}}{\mu\text{Ci} \cdot \text{hr}} \right)$$

| Target     | Source | Body     | Skeleton | Ovaries  | Testes   |
|------------|--------|----------|----------|----------|----------|
| Total Body |        | 4.06E-1* | 4.01E-1* | 5.56E-1* | 5.45E-1* |
| Ribs       |        | 5.07E-3  | 8.41E-3  | 6.68E-4  | 1.08E-4  |
| Pelvis     |        | 6.47E-3  | 1.18E-2  | 2.49E-2  | 6.21E-3  |
| Spine      |        | 8.59E-3  | 2.10E-2  | 3.76E-3  | 2.84E-4  |
| Skull      |        | 3.49E-3  | 9.69E-3  | —        | —        |
| Skeleton   |        | 5.54E-2  | 1.64E-1* | 3.56E-2  | 4.29E-2  |
| Ovaries    |        | 6.74E-5† | 3.10E-5† | 5.44E-2* | —        |
| Testes     |        | 2.85E-4† | 1.62E-4† | —        | 8.17E-2* |

The digits following the symbol E indicate the power of ten by which the number is to be multiplied. Example: 2.31E-2 is equivalent to  $2.31 \times 10^{-2}$  or 0.0231.

- \* Includes both penetrating and nonpenetrating radiation.
- † Calculated by the reciprocity method.

# TABLE 10. TECHNETIUM-99m EFFECTIVE ABSORBED ENERGY

$$\sum \Delta i \phi_i \left( \frac{\text{g. rad}}{\text{uCi-hr}} \right)$$

| Target     | Source | Total Body | Kidney   | Bladder  | Ovaries  | Testes   |
|------------|--------|------------|----------|----------|----------|----------|
| Total Body |        | 1.31E-1*   | 1.52E-1* | 1.66E-1* | 1.78E-1* | 1.74E-1* |
| Kidney     |        | 4.75E-4    | 5.58E-2* | 8.7 E-4  | 2.55E-4  | 1.7 E-5  |
| Bladder    |        | 9.09E-4    | 1.37E-4  | 6.90E-2* | 3.46E-3  | 3.01E-3  |
| Ovaries    |        | 1.77E-5†   | 7.7 E-6† | 5.98E-5† | 4.19E-2* | —        |
| Testes     |        | 7.45E-5†   | 2.2 E-6† | 2.25E-4† | —        | 4.84E-2* |

The digits following the symbol E indicate the power of ten by which the number is to be multiplied. Example: 2.31E-2 is equivalent to 2.31 X 10<sup>-2</sup> or 0.0231.

\* Includes both penetrating and nonpenetrating radiation.

† Calculated by the reciprocity method.
