## I. FRACTURES OF THE ANTERIOR CRANIAL FOSSA

### General remarks

#### Clinico—anatomical survey

a. general picture of the anterior fossa . . . . .	13
b. the roof of the orbit and the cribriform plate . . . . .	14
c. the ethmoid bone and its system of cells . . . . .	15
d. the orbit and its contents . . . . .	15
e. the area of the root of the nose . . . . .	15
f. the zygomaticomaxillary block . . . . .	16
g. the supraorbital region . . . . .	16
h. the orbital surface of the frontal bone . . . . .	16

#### Fracture mechanisms

A. indirect . . . . .	17
1. across the root of the nose . . . . .	17
2. by transmission from the zygomatic region . . . . .	19
3. via the lateral wall of the vault . . . . .	22
4. via the frontal sinuses . . . . .	22
B. direct . . . . .	23
1. via the supraorbital arch . . . . .	23
2. through the inner wall of the orbit . . . . .	24
Synopsis of mechanisms of fractures of the anterior fossa . . . . .	25

#### Classification of fractures

a. longitudinal, across the cribriform plate and the roof of the orbit . . . . .	27
1. midline . . . . .	27
2. intermediate line . . . . .	27
3. lateral line . . . . .	28
b. transverse and oblique, across the anterior fossa . . . . .	28
c. fractures of the maxillofacial skeleton . . . . .	29
1. pyramidal fracture (Le Fort II) . . . . .	29
2. transverse maxillofacial fracture (Le Fort III) . . . . .	30
3. fractures of the zygomatic block . . . . .	30

<b>Clinical signs</b>	
Concussion . . . . .	32
Haemorrhage . . . . .	33
a. free . . . . .	33
1. into the nasal cavity . . . . .	33
2. into the oral cavity . . . . .	35
b. into the soft tissues . . . . .	36
1. palpebral . . . . .	36
2. subconjunctival . . . . .	37
3. retrobulbar . . . . .	37
Escape of cerebrospinal fluid . . . . .	37
a. direct . . . . .	38
b. indirect . . . . .	38
Subcutaneous emphysema and pneumocephalus . . . . .	39
Injury of the brain parenchyma . . . . .	39
a. contusion of the brain tissue . . . . .	39
b. herniation of the brain into the frontal sinuses . . . . .	40
Injury of the cranial nerves . . . . .	40
a. the olfactory nerve . . . . .	40
b. the optic fasciculus and the nerves controlling the movement of the eyeball . . . . .	40
Synopsis of the signs of fractures of the anterior fossa . . . . .	41
<b>Concluding remarks</b>	

## II. FRACTURES OF THE MIDDLE CRANIAL FOSSA

### General remarks

#### Clinico—anatomical survey

a. general picture of the middle cranial fossa . . . . .	44
b. ventral boundary of the anterior fossa and the area of the superior orbital fissure . . . . .	45
c. the sphenoid bone . . . . .	45
d. the parasphenoidal spaces . . . . .	46
e. the pyramid of the temporal bone . . . . .	46
f. the temporomandibular joint . . . . .	47

#### Fracture mechanisms

Study of the origin of fracture mechanisms . . . . .	48
a. mechanisms of shifts of the fracture line from adjacent parts of the base . . . . .	52
b. mechanisms of shifts in the fracture line from the vault . . . . .	54
c. mechanisms of fractures associated with the temporomandibular joint . . . . .	56

#### Classification of fractures

a. longitudinal fractures . . . . .	58
1. leading from the anterior fossa directly to the apex of the pyramid and to the posterior fossa via the inferior petrosal sinus . . . . .	58

2. leading across the body of the pyramid or parallel with the long axis of the pyramid . . . . .	59
3. fractures extending to the pyramid from the fovea articularis . . . . .	60
b. transverse or oblique fractures . . . . .	61
1. rare fractures of the small wings of the sphenoid bone . . . . .	62
2. fractures leading across the body of the sphenoid bone and laterally not touching the pyramid . . . . .	62
3. fractures leading across the body of the sphenoid bone and turning laterally across the body of the pyramid . . . . .	63
4. transverse and oblique fractures starting from the socket of the temporomandibular joint . . . . .	64
<b>Clinical signs</b>	
Main distribution . . . . .	65
Concussion . . . . .	66
Haemorrhage . . . . .	67
a. free . . . . .	67
1. into the nasal cavity and oral cavity . . . . .	67
2. into the nasopharynx through the lacerated wall of the mucous membrane . . . . .	68
3. into the nasopharynx through the pharyngotympanic tube (mechanisms) . . . . .	70
4. via the external auditory meatus (state of the tympanic membrane) . . . . .	74
b. into the tissues . . . . .	76
1. extravasations into the eyelids (mechanism, localization) . . . . .	76
2. spectacle haematoma (origin, mechanisms of infiltration of the blood) . . . . .	78
3. subconjunctival haematomas . . . . .	82
4. retrobulbar haematomas (protrusion of the eyeball and pulsating exophthalmos) . . . . .	84
5. extravasations into the area of the root of the nose . . . . .	84
6. submucosal nasopharyngeal haemorrhage . . . . .	85
7. extravasations in the retrosternocleidomastoid area . . . . .	86
c. Intermeningeal haemorrhage . . . . .	87
1. epidural (extradural) haemorrhage . . . . .	88
2. subdural haemorrhage . . . . .	89
d. Haemorrhage into the brain tissue . . . . .	89
Escape of cerebrospinal fluid . . . . .	90
a. anatomy of the dura mater . . . . .	91
b. mechanism of escape of cerebrospinal fluid . . . . .	91
c. routes of escape . . . . .	91
d. penetration of cerebrospinal fluid through the pyramid . . . . .	92
e. demonstration of cerebrospinal fluid . . . . .	93
f. chronic cerebrospinal fistulae . . . . .	94
Injury of the brain parenchyma . . . . .	96
a. cerebral oedema . . . . .	96
b. contusion of the brain parenchyma . . . . .	97
c. herniation of the brain parenchyma . . . . .	98

Synopsis of signs resulting from injury of the base and brain parenchyma . . . . .	99
Injury of the cranial nerves . . . . .	101
a. relationship of the cranial nerves to the base of the skull . . . . .	101
b. mechanisms of injury to the nerves . . . . .	102
c. clinical manifestations of injury of the cranial nerves (general) . . . . .	102
d. evaluation of the history and relevant mechanisms for rapid orientation on the type and localization of the injury . . . . .	103
First group of cranial nerves: . . . . .	105
optic fasciculus, chiasma, optic tract . . . . .	105
survey of signs of injury of the optic pathways . . . . .	106
nerves governing the movement of the eyeballs . . . . .	109
oculomotor . . . . .	110
trochlear . . . . .	111
abducens . . . . .	111
trigeminal . . . . .	112
Second group of cranial nerves: . . . . .	114
facial (course, mechanisms of injury, signs) . . . . .	115
statoacoustic (idem) . . . . .	116
cochlear . . . . .	117
vestibular . . . . .	118
Synopsis of signs of injury to the cranial nerves . . . . .	119
Survey of fractures of the middle fossa . . . . .	120
<b>Concluding remarks</b>	

### III. FRACTURES OF THE POSTERIOR CRANIAL FOSSA

#### General remarks

#### Clinico—anatomical survey

a. general picture of the posterior cranial fossa . . . . .	129
b. the clivus, jugular notch and hypoglossal canal . . . . .	129
c. the cerebellar surface of the pyramid . . . . .	130
d. structure of the squama occipitalis . . . . .	131
Architectonic survey of the base of the skull . . . . .	131
1. compact structures of the base of the skull . . . . .	131
2. weak spots in the base of the skull . . . . .	132

#### Fracture mechanisms

a. mechanisms acting in a ventrodorsal direction . . . . .	134
b. mechanisms acting from lateral directions . . . . .	134
c. mechanisms acting from a dorsal direction . . . . .	135
d. mechanisms acting up the spinal column (in a cranial direction) . . . . .	135

#### Classification of fractures

a. longitudinal fractures across the whole of the base, entering the fossa occipitalis via the inferior petrosal sulus . . . . .	136
b. fractures crossing the pyramid . . . . .	137
c. fractures leading from the squama occipitalis . . . . .	137

d. circular fractures . . . . .	137
<b>Clinical signs</b>	
Concussion . . . . .	139
Haemorrhage . . . . .	142
a. free, to the exterior . . . . .	142
b. into the tissues . . . . .	144
1. below the nasopharyngeal mucosa . . . . .	144
2. into the retromastoid spaces . . . . .	145
3. into the vertebral canal and the area of the clivus . . . . .	146
Escape of cerebrospinal fluid . . . . .	148
a. penetration into the nasopharynx . . . . .	148
b. infiltration into the external auditory meatus . . . . .	148
Injury of the cranial nerves . . . . .	149
a. nerves controlling the movement of the eyeball . . . . .	149
b. auditory and facial . . . . .	150
c. glossopharyngeal, vagus, accessory and hypoglossal . . . . .	150
Herniation of the brain and tissue emphysema . . . . .	154
<b>X-RAY EXAMINATION</b>	
Introductory remarks . . . . .	156
Basic conditions of examination . . . . .	157
I. The vault . . . . .	157
II. The facial region and its relationship to the base . . . . .	158
III. The temporomandibular joint and its relationship to the base . . . . .	160
IV. The base of the skull . . . . .	160
Concluding remarks

## I. FRACTURES OF THE ANTERIOR CRANIAL FOSSA

### General remarks

#### Clinico—anatomical survey

a. general picture of the anterior fossa . . . . .	13
b. the roof of the orbit and the cribriform plate . . . . .	14
c. the ethmoid bone and its system of cells . . . . .	15
d. the orbit and its contents . . . . .	15
e. the area of the root of the nose . . . . .	15
f. the zygomaticomaxillary block . . . . .	16
g. the supraorbital region . . . . .	16
h. the orbital surface of the frontal bone . . . . .	16

#### Fracture mechanisms

A. indirect . . . . .	17
1. across the root of the nose . . . . .	17
2. by transmission from the zygomatic region . . . . .	19
3. via the lateral wall of the vault . . . . .	22
4. via the frontal sinuses . . . . .	22
B. direct . . . . .	23
1. via the supraorbital arch . . . . .	23
2. through the inner wall of the orbit . . . . .	24
Synopsis of mechanisms of fractures of the anterior fossa . . . . .	25

#### Classification of fractures

a. longitudinal, across the cribriform plate and the roof of the orbit . . . . .	27
1. midline . . . . .	27
2. intermediate line . . . . .	27
3. lateral line . . . . .	28
b. transverse and oblique, across the anterior fossa . . . . .	28
c. fractures of the maxillofacial skeleton . . . . .	29
1. pyramidal fracture (Le Fort II) . . . . .	29
2. transverse maxillofacial fracture (Le Fort III) . . . . .	30
3. fractures of the zygomatic block . . . . .	30

<b>Clinical signs</b>	
Concussion . . . . .	32
Haemorrhage . . . . .	33
a. free . . . . .	33
1. into the nasal cavity . . . . .	33
2. into the oral cavity . . . . .	35
b. into the soft tissues . . . . .	36
1. palpebral . . . . .	36
2. subconjunctival . . . . .	37
3. retrobulbar . . . . .	37
Escape of cerebrospinal fluid . . . . .	37
a. direct . . . . .	38
b. indirect . . . . .	38
Subcutaneous emphysema and pneumocephalus . . . . .	39
Injury of the brain parenchyma . . . . .	39
a. contusion of the brain tissue . . . . .	39
b. herniation of the brain into the frontal sinuses . . . . .	40
Injury of the cranial nerves . . . . .	40
a. the olfactory nerve . . . . .	40
b. the optic fasciculus and the nerves controlling the movement of the eyeball . . . . .	40
Synopsis of the signs of fractures of the anterior fossa . . . . .	41
<b>Concluding remarks</b>	

## II. FRACTURES OF THE MIDDLE CRANIAL FOSSA

### General remarks

#### Clinico—anatomical survey

a. general picture of the middle cranial fossa . . . . .	44
b. ventral boundary of the anterior fossa and the area of the superior orbital fissure . . . . .	45
c. the sphenoid bone . . . . .	45
d. the parasphenoidal spaces . . . . .	46
e. the pyramid of the temporal bone . . . . .	46
f. the temporomandibular joint . . . . .	47

#### Fracture mechanisms

Study of the origin of fracture mechanisms . . . . .	48
a. mechanisms of shifts of the fracture line from adjacent parts of the base . . . . .	52
b. mechanisms of shifts in the fracture line from the vault . . . . .	54
c. mechanisms of fractures associated with the temporomandibular joint . . . . .	56

#### Classification of fractures

a. longitudinal fractures . . . . .	58
1. leading from the anterior fossa directly to the apex of the pyramid and to the posterior fossa via the inferior petrosal sinus . . . . .	58

2. leading across the body of the pyramid or parallel with the long axis of the pyramid . . . . .	59
3. fractures extending to the pyramid from the fovea articularis . . . . .	60
b. transverse or oblique fractures . . . . .	61
1. rare fractures of the small wings of the sphenoid bone . . . . .	62
2. fractures leading across the body of the sphenoid bone and laterally not touching the pyramid . . . . .	62
3. fractures leading across the body of the sphenoid bone and turning laterally across the body of the pyramid . . . . .	63
4. transverse and oblique fractures starting from the socket of the temporomandibular joint . . . . .	64
<b>Clinical signs</b>	
Main distribution . . . . .	65
Concussion . . . . .	66
Haemorrhage . . . . .	67
a. free . . . . .	67
1. into the nasal cavity and oral cavity . . . . .	67
2. into the nasopharynx through the lacerated wall of the mucous membrane . . . . .	68
3. into the nasopharynx through the pharyngotympanic tube (mechanisms) . . . . .	70
4. via the external auditory meatus (state of the tympanic membrane) . . . . .	74
b. into the tissues . . . . .	76
1. extravasations into the eyelids (mechanism, localization) . . . . .	76
2. spectacle haematoma (origin, mechanisms of infiltration of the blood) . . . . .	78
3. subconjunctival haematomas . . . . .	82
4. retrobulbar haematomas (protrusion of the eyeball and pulsating exophthalmos) . . . . .	84
5. extravasations into the area of the root of the nose . . . . .	84
6. submucosal nasopharyngeal haemorrhage . . . . .	85
7. extravasations in the retrosternocleidomastoid area . . . . .	86
c. Intermeningeal haemorrhage . . . . .	87
1. epidural (extradural) haemorrhage . . . . .	88
2. subdural haemorrhage . . . . .	89
d. Haemorrhage into the brain tissue . . . . .	89
Escape of cerebrospinal fluid . . . . .	90
a. anatomy of the dura mater . . . . .	91
b. mechanism of escape of cerebrospinal fluid . . . . .	91
c. routes of escape . . . . .	91
d. penetration of cerebrospinal fluid through the pyramid . . . . .	92
e. demonstration of cerebrospinal fluid . . . . .	93
f. chronic cerebrospinal fistulae . . . . .	94
Injury of the brain parenchyma . . . . .	96
a. cerebral oedema . . . . .	96
b. contusion of the brain parenchyma . . . . .	97
c. herniation of the brain parenchyma . . . . .	98

Synopsis of signs resulting from injury of the base and brain parenchyma . . . . .	99
Injury of the cranial nerves . . . . .	101
a. relationship of the cranial nerves to the base of the skull . . . . .	101
b. mechanisms of injury to the nerves . . . . .	102
c. clinical manifestations of injury of the cranial nerves (general) . . . . .	102
d. evaluation of the history and relevant mechanisms for rapid orientation on the type and localization of the injury . . . . .	103
First group of cranial nerves: . . . . .	105
optic fasciculus, chiasma, optic tract . . . . .	105
survey of signs of injury of the optic pathways . . . . .	106
nerves governing the movement of the eyeballs . . . . .	109
oculomotor . . . . .	110
trochlear . . . . .	111
abducens . . . . .	111
trigeminal . . . . .	112
Second group of cranial nerves: . . . . .	114
facial (course, mechanisms of injury, signs) . . . . .	115
statoacoustic (idem) . . . . .	116
cochlear . . . . .	117
vestibular . . . . .	118
Synopsis of signs of injury to the cranial nerves . . . . .	119
Survey of fractures of the middle fossa . . . . .	120
<b>Concluding remarks</b>	

### III. FRACTURES OF THE POSTERIOR CRANIAL FOSSA

#### General remarks

#### Clinico—anatomical survey

a. general picture of the posterior cranial fossa . . . . .	129
b. the clivus, jugular notch and hypoglossal canal . . . . .	129
c. the cerebellar surface of the pyramid . . . . .	130
d. structure of the squama occipitalis . . . . .	131
Architectonic survey of the base of the skull . . . . .	131
1. compact structures of the base of the skull . . . . .	131
2. weak spots in the base of the skull . . . . .	132

#### Fracture mechanisms

a. mechanisms acting in a ventrodorsal direction . . . . .	134
b. mechanisms acting from lateral directions . . . . .	134
c. mechanisms acting from a dorsal direction . . . . .	135
d. mechanisms acting up the spinal column (in a cranial direction) . . . . .	135

#### Classification of fractures

a. longitudinal fractures across the whole of the base, entering the fossa occipitalis via the inferior petrosal sulcus . . . . .	136
b. fractures crossing the pyramid . . . . .	137
c. fractures leading from the squama occipitalis . . . . .	137

d. circular fractures . . . . .	137
<b>Clinical signs</b>	
Concussion . . . . .	139
Haemorrhage . . . . .	142
a. free, to the exterior . . . . .	142
b. into the tissues . . . . .	144
1. below the nasopharyngeal mucosa . . . . .	144
2. into the retromastoid spaces . . . . .	145
3. into the vertebral canal and the area of the clivus . . . . .	146
Escape of cerebrospinal fluid . . . . .	148
a. penetration into the nasopharynx . . . . .	148
b. infiltration into the external auditory meatus . . . . .	148
Injury of the cranial nerves . . . . .	149
a. nerves controlling the movement of the eyeball . . . . .	149
b. auditory and facial . . . . .	150
c. glossopharyngeal, vagus, accessory and hypoglossal . . . . .	150
Herniation of the brain and tissue emphysema . . . . .	154

## **X-RAY EXAMINATION**

Introductory remarks . . . . .	156
Basic conditions of examination . . . . .	157
I. The vault . . . . .	157
II. The facial region and its relationship to the base . . . . .	158
III. The temporomandibular joint and its relationship to the base . . . . .	160
IV. The base of the skull . . . . .	160

## **Concluding remarks**
