PREFACE

PROFESSIONAL TECHNICIAN SERIES Part of Pearson Automotive's Professional Technician Series, the seventh edition of *Automotive Chassis Systems* represents the future of automotive textbooks. The series is a full-color, media-integrated solution for today's students and instructors. The series includes textbooks that cover all eight areas of ASE certification, plus additional titles covering common courses.

The series is also peer reviewed for technical accuracy.

NEW TO THIS SEVENTH EDITION As a result of comments and suggestions from reviewers and automotive instructors, the following changes have been made to the new 7th edition:

- Over 50 new full color photos and line drawings have been added to help bring the subject to life.
- All of the content throughout has been updated to meet the latest NATEF and ASE standards.
- The chapter on brake principles (Chapter 4) has been expanded and now includes the details on brake friction materials which are now in one location instead of being repeated in the drum and disc brake chapters.
- Qualifying a brake lathe information added to chapter 14.
- The chapter on regenerative brakes (chapter 20) has been moved as suggested by automotive instructors.
- The chapter on power steering has been split into two separate chapters - **Hydraulic Power Steering Systems** (chapter 30) and **Electric Power Steering Systems** (chapter 31) making teaching and learning these topics easier.
- New Case Study elements which include the "Three Cs" (Complaint, Cause and Correction) added to many chapters.
- New content on tire selection, chrome clad wheels and using a pin plate to balance wheels added in chapter 23.
- Additional content on snap-in and clamp-on TPMS sensors plus updated relearn procedures in chapter 4.
- Additional content on various wheel weight material plus wheel flange information added to the totally updated Chapter 23.
- New information a Hi Per strut included in Chapter 25.
- Many new review and chapter quiz questions were changed to match the new and updated content in each chapter.

Examples of what was changed and updated include:

1. The GM regular production code (RPO) information added to chapter 3 (Braking System Components and Performance Standards)
2. Ceramic brake pads and environmental concerns of copper in brake friction material added to chapter 4 (Brake Principles and Friction Materials).
3. Case studies have been updated to include the "Three Cs" (complaint, cause and correction).
4. The BCM control of the red brake warning light (RBWL) has been added to chapter 6.
5. Brake line corrosion reduction coating has been added to chapter 7 (Brake Fluid and Lines).
6. New disc brake photo sequence added to chapter 13 (Disc Brake Diagnosis and Service)

ASE AND NATEF CORRELATED NATEF certified programs need to demonstrate that they use course material that covers NATEF and ASE tasks. All Professional Technician textbooks have been correlated to the appropriate ASE and NATEF task lists. These correlations can be found in the appendices.

A COMPLETE INSTRUCTOR AND STUDENT SUPPLEMENTS PACKAGE All Professional Technician textbooks are accompanied by a full set of instructor and student supplements. Please see page vi for a detailed list of supplements.

A FOCUS ON DIAGNOSIS AND PROBLEM SOLVING The Professional Technician Series has been developed to satisfy the need for a greater emphasis on problem diagnosis. Automotive instructors and service managers agree that students and beginning technicians need more training in diagnostic procedures and skill development. To meet this need and demonstrate how real-world problems are solved, Case Study features are included throughout and highlight how real-life problems are diagnosed and repaired.

The following pages highlight the unique core features that set the Professional Technician Series book apart from other automotive textbooks.

chapter 1

SERVICE INFORMATION, TOOLS, AND SAFETY

LEARNING OBJECTIVES

After studying this chapter, the reader will be able to:

1. Locate and interpret vehicle and part identification numbers and labels.
2. Locate vehicle service information from a variety of sources.
3. Identify the strength and grades of various threaded fasteners.
4. Identify the various kinds of hand tools and their uses.
5. Identify the various kinds of automotive tools and their uses.
6. Describe personal protective equipment and safety precautions to be used when working on automobiles.

This chapter will help you understand the ASE content knowledge for vehicle identification and the proper use of tools and shop equipment.

KEY TERMS

Adjustable wrench 9	Nuts 8
Bench grinders 25	Open-end wrench 9
Bolts 5	PPE 25
Breaker bar 11	Pinch weld seam 29
Bump cap 25	Pitch 5
Calibration codes 3	Pliers 15
Campaign 4	Punch 18
Casting numbers 3	Ratchet 11
Chester bar 13	Recall 4
Chisel 18	Screwdriver 13
Drive sizes 11	Snips 18
Extensions 11	Socket 10
Eye wash station 34	Socket adapter 13
Files 17	Spontaneous combustion 27
Fire blankets 33	SST 22
Fire extinguisher classes 33	Stud 5
GAWR 3	Tensile strength 6
Grade 6	Trouble light 22
GVWR 3	TSBs 4
Hacksaw 19	UNC 5
Hammers 14	UNF 5
Hybrid electric vehicles (HEVs) 35	Universal joints 11
Light-emitting diode (LED) 23	VECI 3
Metric bolt 6	VIN 2
	Washers 8
	Wrenches 9

1

SAFETY TIP

Shop Cloth Disposal

Always dispose of oily shop cloths in an enclosed container to prevent a fire. ● **SEE FIGURE 1-69.** Whenever oily cloths are thrown together on the floor or workbench, a chemical reaction can occur, which can ignite the cloth even without an open flame. This process of ignition without an open flame is called **spontaneous combustion**.

SAFETY TIPS alert students to possible hazards on the job and how to avoid them.

CASE STUDY

Three Brake Jobs in 40,000 Miles

A service technician was asked to replace the front disc brake pads on a Pontiac Grand Am because the sensors were touching the rotors and making a squealing sound. This was the third time that the front brakes needed to be replaced. Previous brake repairs had been limited to replacement of the front disc brake pads only.

When the caliper was removed and the pads inspected, it was discovered that a part of one pad had broken and a piece of the lining was missing. ● **SEE FIGURE 13-15.**

CASE STUDIES present students with actual automotive scenarios and show how these common (and sometimes uncommon) problems were diagnosed and repaired.

TECH TIP

It Just Takes a Second

Whenever removing any automotive component, it is wise to screw the bolts back into the holes a couple of threads by hand. This ensures that the right bolt will be used in its original location when the component or part is put back on the vehicle.

TECH TIPS feature real-world advice and “tricks of the trade” from ASE-certified master technicians.

FREQUENTLY ASKED QUESTION

How Many Types of Screw Heads Are Used in Automotive Applications?

There are many, including Torx, hex (also called Allen), plus many others used in custom vans and motor homes. ● **SEE FIGURE 1-9.**

FREQUENTLY ASKED QUESTIONS are based on the author's own experience and provide answers to many of the most common questions asked by students and beginning service technicians.

NOTE: Most of these “locking nuts” are grouped together and are commonly referred to as *prevailing torque nuts*. This means that the nut will hold its tightness or torque and not loosen with movement or vibration.

NOTES provide students with additional technical information to give them a greater understanding of a specific task or procedure.

CAUTION: *Never use hardware store (nongraded) bolts, studs, or nuts on any vehicle steering, suspension, or brake component. Always use the exact size and grade of hardware that is specified and used by the vehicle manufacturer.*

CAUTIONS alert students about potential damage to the vehicle that can occur during a specific task or service procedure.

WARNING

Do not use incandescent trouble lights around gasoline or other flammable liquids. The liquids can cause the bulb to break and the hot filament can ignite the flammable liquid which can cause personal injury or even death.

WARNINGS alert students to potential dangers to themselves during a specific task or service procedure.

SUMMARY

- Bolts, studs, and nuts are commonly used as fasteners in the chassis. The sizes for fractional and metric threads are different and are not interchangeable. The grade is the rating of the strength of a fastener.
- Whenever a vehicle is raised above the ground, it must be supported at a substantial section of the body or frame.
- Wrenches are available as open end, box end, and combination open and box end.
- An adjustable wrench should only be used where the proper size is not available.
- Line wrenches are also called flare-nut wrenches, fitting wrenches, or tube-nut wrenches and are used to remove fuel or refrigerant lines.
- Sockets are rotated by a ratchet or breaker bar, also called a flex handle.
- Torque wrenches measure the amount of torque applied to a fastener.
- Screwdriver types include straight blade (flat tip), Phillips, and Torx.
- Hammers and mallets come in a variety of sizes and weights.
- Pliers are a useful tool and are available in many different types, including slip-joint, multigroove, linesman's, diagonal, needle-nose, and locking pliers.
- Other common hand tools include snap-ring pliers, files, cutters, punches, chisels, and hacksaws.
- Hybrid electric vehicles should be de-powered if any of the high-voltage components are going to be serviced.

REVIEW QUESTIONS

- List three precautions that must be taken whenever hoisting (lifting) a vehicle.
- Describe how to determine the grade of a fastener, including how the markings differ between fractional and metric bolts.
- List four items that are personal protective equipment (PPE).
- List the types of fire extinguishers and their use.
- Why are wrenches offset 15 degrees?
- What are the other names for a line wrench?
- What are the standard automotive drive sizes for sockets?
- Which type of screwdriver requires the use of a hammer or mallet?
- What is inside a dead-blow hammer?
- What type of cutter is available in left and right cutters?

CHAPTER QUIZ

- The correct location for the pads when hoisting or jacking the vehicle can often be found in the _____.
a. Service manual c. Owner's manual
b. Shop manual d. All of the above
- For the best working position, the work should be _____.
a. At neck or head level
b. At knee or ankle level
c. Overhead by about 1 foot
d. At chest or elbow level
- A high-strength bolt is identified by _____.
a. A UNC symbol c. Strength letter codes
b. Lines on the head d. The coarse threads
- A fastener that uses threads on both ends is called a _____.
a. Cap screw c. Machine screw
b. Stud d. Crest fastener
- When working with hand tools, always _____.
a. Push the wrench—don't pull it toward you
b. Pull a wrench—don't push it away from you
- The proper term for Channel Locks is _____.
a. Vise-Grip c. Locking pliers
b. Crescent wrench d. Multigroove adjustable pliers
- The proper term for Vise-Grip is _____.
a. Locking pliers c. Side cuts
b. Slip-joint pliers d. Multigroove adjustable pliers
- Two technicians are discussing torque wrenches. Technician A says that a torque wrench is capable of tightening a fastener with more torque than a conventional breaker bar or ratchet. Technician B says that a torque wrench should be calibrated regularly for the most accurate results. Which technician is correct?
a. Technician A only
b. Technician B only
c. Both Technicians A and B
d. Neither Technician A nor B
- What type of screwdriver should be used if there is very limited space above the head of the fastener?
a. Offset screwdriver c. Impact screwdriver
b. Standard screwdriver d. Robertson screwdriver
- What type of hammer is plastic coated, has a metal casing inside, and is filled with small lead balls?
a. Dead-blow hammer
b. Soft-blow hammer
c. Sledge hammer
d. Plastic hammer

SERVICE INFORMATION, TOOLS, AND SAFETY 39

THE SUMMARY, REVIEW QUESTIONS, AND CHAPTER QUIZ at the end of each chapter help students review the material presented in the chapter and test themselves to see how much they've learned.

DRUM BRAKE SERVICE

1 Tools needed to service a drum brake assembly include brake tools, adjuster gauge, wheel lag nut sockets, and brake-lining adjuster or a torque wrench.

2 After safely raising the vehicle to level height, remove the brake drum.

3 Remove the primary forward spring shoe return spring using a brake line. Then, remove the secondary return spring.

4 Remove the parking brake shoe along with the adjuster spring.

5 Use a brake tool to depress the hold-down spring, and then release it until the nut in the return line is up with the ballpoint part of the hold-down pin.

6 Removing the primary brake shoe plus the starwheel adjuster and connecting spring.

STEP-BY-STEP

7 When the secondary spring hold-down spring is removed, the adjuster shoe and gear return spring can be removed.

8 The parking brake shoe can now be disconnected from the secondary brake shoe.

9 Check the wheel cylinder for leakage. The wheel cylinder is usually new and not leaking.

10 Clean all six brake shoe edges. Lubricate the adjuster with silicone brake grease.

11 Many technicians prefer to assemble the connecting spring and adjuster adjuster in both shoes to help in the reinstallation.

12 Attaching the parking brake shoe to the secondary shoe. The assembled parts at the bottom help keep everything together.

STEP-BY-STEP photo sequences show in detail the steps involved in performing a specific task or service procedure.

SUPPLEMENTS

RESOURCES IN PRINT AND ONLINE

NAME OF SUPPLEMENT	PRINT	ONLINE	AUDIENCE	DESCRIPTION
Instructor Resource Manual 0134072480		✓	Instructors	NEW! The ultimate teaching aid: chapter summaries, key terms, chapter learning objectives, lecture resources discuss/ demonstrate classroom activities. MyAutomotiveLab correlation, and answers to the in-text review and quiz questions.
TestGen 0134072502		✓	Instructors	Test generation software and test bank for the text.
PowerPoint Presentation 0134072448		✓	Instructors	Slides include chapter learning objectives, lecture outline of the text, and graphics from the book.
Image Bank 0134072456		✓	Instructors	All of the images and graphs from the textbook to create customized lecture slides.
NATEF Correlated Task Sheets – for instructors		✓	Instructors	Downloadable NATEF task sheets for easy customization and development of unique task sheets.
NATEF Correlated Task Sheets – for students 0134072375	✓		Students	Study activity manual that correlates NATEF Automobile Standards to chapters and page numbers in the text. Available to students at a discounted price when packaged with the text.

All online resources can be downloaded from the Instructor's Resource Center: www.pearsonhighered.com/irc

ACKNOWLEDGMENTS

A large number of people and organizations have cooperated in providing the reference material and technical information used in this text. The author wishes to express sincere thanks to the following individuals and organizations for their special contributions:

Richard Krieger, Lapeer County Vo-Tech Center
James (Mike) Watson, Watson Automotive LLC
Jim Morton, Automotive Training Center (ATC)
Jim Linder, Linder Technical Services, Inc.

TECHNICAL AND CONTENT REVIEWERS The following people reviewed the manuscript before production and checked it for technical accuracy and clarity of presentation. Their suggestions and recommendations were included in the final draft of the manuscript. Their input helped make this textbook clear and technically accurate while maintaining the easy-to-read style that has made other books from the same author so popular.

PHOTO SEQUENCES The author wishes to thank Blaine Heeter, Mike Garblik, and Chuck Taylor of Sinclair Community College in Dayton, Ohio, plus Steve Cartwright, Tony Martin, and James (Mike) Watson who helped with many of the photos.

Most of all, I wish to thank Michelle Halderman for her assistance in all phases of manuscript preparation.

—James D. Halderman

ABOUT THE AUTHOR

JIM HALDERMAN brings a world of experience, knowledge, and talent to his work. His automotive service experience includes working as a flat-rate technician, a business owner, and a professor of automotive technology at a leading U.S. community college for more than 20 years.

He has a Bachelor of Science Degree from Ohio Northern University and a Master's Degree in Education from Miami University in Oxford, Ohio. Jim also holds a U.S. Patent for an electronic transmission control device. He is an ASE certified Master Automotive Technician and Advanced Engine Performance (L1) ASE certified.

Jim is the author of many automotive textbooks, all published by Pearson Education.

Jim has presented numerous technical seminars to national audiences including the California Automotive Teachers (CAT) and the Illinois College Automotive Instructor Association (ICAIA). He is also a member and presenter at the North American Council of Automotive Teachers (NACAT). Jim was also named Regional Teacher of the Year by General Motors Corporation and an outstanding alumnus of Ohio Northern University.

Jim and his wife, Michelle, live in Dayton, Ohio. They have two children. You can reach Jim at

TIRES AND WHEELS 363

- Learning Objectives 363
- Key Terms 363
- Introduction to Tires 364
- Parts of a Tire 364

- Tire Molding 367
- Metric Designation 368
- Service Description 371
- High-Flotation Tire Sizes 372
- Load Index and Equivalent Loads 373
- Speed Ratings 373
- Tire Pressure and Traction 376
- Tire Conicity and Ply Steer 376
- Vehicle Handling and Tire Slip Angle 377
- Rim Width and Tire Size 377
- Uniform Tire Quality Grading System 378
- All-Season Tire Designation 379
- DOT Tire Code 379
- Spare Tires 380
- Run-Flat Tires 381
- General Motors TPC Rating 382
- Tire Selection Considerations 383
- Wheels 384
- Tire Valves 388
- Unsprung Weight 388
- Lug Nuts 389
