Contributors to Volume I

Numbers in parentheses indicate the pages on which the authors' contributions begin

- R. ABRAMS, *Department of Physiology, School of Medicine, University of Pennsylvania, Philadelphia, Pennsylvania, U.S.A.* (p. 251).
- L. ADEZATI, *Clinica Medica, University of Genoa, Italy* (p. 317).
- I. ASSENMACHER, *Laboratoire de Physiologie Animale, Faculté des Sciences, Montpellier, France* (p. 273).
- E. ALPERT, *Merck Sharp and Dohme Research Laboratories, West Point, Pennsylvania, U.S.A.* (p. 517).
- L. BASCHIERI, *Istituto Patologia Medica, University of Rome, Rome, Italy* (p. 533).
- G. K. BENSON, *Department of Veterinary Anatomy, The University, Liverpool, England* (p. 247).
- P. M. F. BISHOP, *Institute of Obstetrics and Gynecology, London, England* (p. 65).
- W. P. BLACK, *Boston City and Lying In Hospitals, Harvard Medical School, Boston, Massachusetts, U.S.A.* (p. 81).
- I. L. BONTA, *Department of Pharmacological Research, N. V. Organon, Oss, The Netherlands* (p. 493).
- A. BOWERS, *Research Laboratories, Syntex, S. A., Mexico City, Mexico* (p. 29).
- R. V. BROOKS, *Department of Medicine and Chemical Pathology, St. Thomas's Hospital Medical School, London, England* (p. 441).
- I. E. BUSH, *Department of Physiology, The Medical School, Birmingham, England* (p. 353).
- J. CAHN, *Laboratoire de Neurochimie, Clinique Neurochirurgicale, Paris, France* (p. 501).
- H. J. CAMPBELL, *Department of Neuroendocrinology, Institute of Psychiatry, The Maudsley Hospital, London, England* (p. 259).
- A. CARNICELLI, *Istituto di Patologia Medica, University of Pisa, Pisa, Italy* (p. 167).
- F. CERESA, *Clinica Medica, University of Turin, Turin, Italy* (p. 99).
- J. J. CHART, *Research Department, Ciba Pharmaceutical Company, Summit, New Jersey, U.S.A.* (p. 399).
- B. T. DONOVAN, *Department of Neuroendocrinology, Institute of Psychiatry, The Maudsley Hospital, London, England* (p. 231).
- R. I. DORFMAN, *Worcester Foundation for Experimental Biology, Shrewsbury, Massachusetts, U.S.A.* (p. 39).
- F. J. EBLING, *Department of Zoology, Sheffield University, Sheffield, England* (p. 537).

- R. H. EGDAHL, *Strauss Surgical Research Laboratory, Medical College of Virginia, Richmond, Virginia, U.S.A.* (p. 209).
- J. EICHHORN, *The Worcester Foundation for Experimental Biology, Shrewsbury, Massachusetts, U.S.A.* (p. 359).
- E. EISENBERG, *The Department of Medicine, University of California School of Medicine, San Francisco, California, U.S.A.* (p. 517).
- L. L. ENGEL, *The John Collins Warren Laboratories of the Huntingdon Memorial Hospital of Harvard University, Massachusetts General Hospital, Boston, Massachusetts, U.S.A.* (p. 291).
- A. ERCOLI, *Vister Research Laboratories, Casatenovo (Como), Italy.*
- J. W. EVERETT, *Department of Anatomy, Duke University School of Medicine, Durham, North Carolina, U.S.A.* (p. 235).
- G. FALUDI, *Associate in Medicine, Department of Medicine, Hahnemann Medical College General Hospital, Philadelphia, Pennsylvania, U. S. A.* (p. 515).
- G. FARRELL, *Department of Physiology, Western Reserve University, Cleveland, Ohio, U.S.A.* (p. 141).
- G. FEKETE, *Chemical Works of Gedeon Richter, Ltd., Budapest, Hungary* (p. 351).
- W. H. FISHMAN, *Tufts University School of Medicine, Boston, Massachusetts, U.S.A.* (p. 301).
- B. FLERKÓ, *Department of Anatomy, Medical University, Pécs, Hungary* (p. 221).

Foreword

It is over thirty years since the isolation and chemical identification of the first hormonal steroid (estrone). There followed in the 1930's a brilliant series of investigations which led to the identification of most of the major steroids secreted by the ovaries, the testes, the adrenal cortex, and the placenta. Since those days, when these steroids were available at best in milligram amounts, there has been an exponential increase in the amounts of steroid hormones preparable by partial synthesis and in the investigation of their pharmacological, physiological, and biochemical properties. Keeping pace with, and, indeed, often anteceding our knowledge of the steroid hormones, has been the production of derivatives, analogues, and homologues of the hormones. In order to encompass the rich chemical, biochemical, and medical knowledge in the steroid hormone field, the inclusion of work with these steroid relatives led to the "International Congress on Hormonal Steroids." Our knowledge of the regulatory activity of the steroid hormones at the organ, tissue, and cellular levels has been aided and enlarged by studies with the synthetics. Their contribution to the sharpened insight is obvious in numerous papers presented to this Congress, and included in this volume.

As we review the subject matter presented in the symposia and round-table conferences, the major areas of research with steroids are sharply illuminated. These major areas may be listed as:

(1) Steroid chemistry, ranging from the natural product isolation to organic syntheses and including studies of reaction mechanisms.

(2) The biogenesis and metabolic transformations of the naturally occurring hormones.

(3) The secretion, transport, conjugation, and excretion of the steroid hormones and of synthetic chemical relatives.

(4) The control of steroid hormone secretion by endogenous humoral and neurohumoral agents and by diverse exogenous agents.

(5) The relationship between chemical structure and physiological function of hormonal steroids of all types.

(6) The regulatory effects of hormonal steroids on specific target tissues.

(7) The repercussive, secondary or indirect actions of the hormonal steroids upon diverse processes.

(8) The role of hormonal steroids in endocrine and neuroendocrine pathology, including steroid therapy.

(9) Hormonal adjustments to physical and psychological stresses and to the aging process.

Among the papers presented to the Congress are accounts of data extremely pertinent to the foregoing topics. These papers illustrate the enormous amount of research activity devoted to the steroids and their biological and medical involvements. Indeed, they confirm the impression that there is scarcely a vital process, an aspect of behavior or personality, or organic pathological lesion which is not in one way or another affected by steroids. From the crowns of our heads to the tips of our toes, the steroid flux is incessantly at work. In this volume, the reader will find able presentations by experienced and sagacious investigators of the what, how, and why of this multivarious steroid activity.

We wish to thank all the people who have contributed to the organization of the Congress and to the publication of these volumes and made them a successful reality: Drs. F. Fraschini, G. Gavazzi, G. Giuliani, G. Mangili, M. Motta, E. Müller, L. Martini, and A. Pecile.

Contents of Volume 2

- Recent Applications of Mass Spectrometry in Steroid Chemistry. By C. Djerassi, H. Mudzikiewicz, and J. M. Wilson
- Some Thermodynamic Factors in a Postulated Association of Hydrocortisone with a Complementary B-Face Receptor. By L. H. Sarett
- The Stereochemistry of Unsymmetrically Substituted 16 α , 17 α -Methylene-dioxyprogesterones. By J. Fried and E. F. Sabo
- The Chemistry and Biology of 17-Substituted Estrene-3 β , 17 β -diols. By F. B. Colton and P. Klimstra
- Structure-Activity Relationships of Some Aldosterone Antagonists. By R. R. Burtner
- Synthesis of a Structural Isomer of Aldosterone and of Related Compounds. By T. Kubota and M. Ehrenstein
- Synthesis of 4-Hydroxy-3-Keto- Δ^4 -Steroids. By B. Camerino
- 7 α -Methyltestosterones, A New Class of Potent Anabolic Agents. By J. A. Campbell and J. C. Babcock
- New Heterocyclic Compounds. By P. de Ruggieri and C. Gandolfi
- Syntheses of α -Methyl Steroids. By R. Wiechert
- Some Recent Advances in the Chemistry of 16- β -Methylsteroids. By G. Nathanson and E. Testa
- Sterically Controlled Grignard Reactions: The Preparation of 17-Methylated Progesterone Derivatives. By R. Deghenghli, Y. Lefebvre, P. F. Morand, and R. Gaudry
- New Reactions in Corticosteroid Side Chain. By R. Gardi
- Intramolecular Condensation of Some 6-Acetylthio-Steroids. By K. Takeda and T. Komeno
- Anabolic and Androgenic Activities of 7 α , 10 α -Dimethyl-testosterone (U-190763), A New Anabolic Steroid. By J. C. Stucki, G. W. Duncan, and S. C. Lyster
- Ring A Modified Androstanes. New Classes of Anabolic Agents. By A. Bowers
- Steroid-17 β -yl Acetals and Enol Ethers: New Orally Active, C-17 α not Alkylated, Anabolic Compounds. By G. Falconi
- Recent Findings in Anabolic Steroids. By G. K. Suchowsky and K. Junkman
- Wy 3475, A New, Potent, Orally Active Anabolic Agent. By R. A. Edgren and H. Smith
- The Biological Evaluation of the Anabolic Activity. By G. Baldratti
- Studies on the Dissociation between Androgenic and Myotropic

- Activity of Anabolic Steroids. The Effect of Δ^6 -retrotestosterone. By A. Querido and A. A. H. Kassenaar
- Applications and Limits of Anabolizing Steroid Treatment. By G. M. Molinatti and F. Camanni
- Clinical Experiences with Anabolic Steroids in Some Special Indications. By H. Kopera
- The Progesterone Block. By H. Takeda
- Progesterone and Functional Uterine Disorders. By M. Lloyd-Jacob
- Progesterone and Ions. By E. M. Coutinho
- Action of Progestational Agents at the Hypophyseal Level. By G. Mangili, M. Fochi, and A. Pecile
- The Biological Profile of Progesterone and a Consideration of the Bioassay of Progestogens. By M. X. Zarrow
- Serial Studies of Plasma Progesterone by a Double Isotope Derivative Technique. By C. A. Woolever, and A. Goldfien
- Clinical Aspects of the Progesterone Block. By C. Wood and A. Csapó
- Clinical Considerations on the Use of Progestational Hormones in Pregnancy. By F. Fuchs
- The Effect of Various Compounds on Pituitary Function in Man as Judged by Urinary Gonadotropin Assays. By J. A. Loraine and E. T. Bell
- Effect of Corticoids and Progestins on Pituitary Gonadotropic Functions in Immature Rats. By E. G. Shipley and R. K. Meyer
- Effects of Progestational Steroids on the Cytology of the Pituitary Gland. Experimental Investigation. By L. Mosca
- In Vivo* and *in vitro* Effects of Steroids on Pituitary Prolactin Secretion. By J. Meites and C. S. Nicoll
- Effects of the Gonadal Hormones on ACTH Secretion. By J. I. Kitay
- Observations on the Action of Some Steroids Derived from Testosterone at the Adrenal Level. By F. Fraschini, G. Gavazzi, and G. Giuliani
- Inhibition of the Adrenal Cortex by Dexamethasone. Its Application in the Diagnosis of Hyperadrenalism and in the Dynamic Study of the Hormonal Function of the Gonads. By M. F. Jayle
- The Pituitary Adrenal Function During Pregnancy. By J. J. Hoet, G. Pagni and G. C. Saba
- A Viewpoint on Animal Tumors as Test Systems for Steroids. By E. P. Vollmer
- Action of Hormonal Steroids on Transplantable Human and Animal Tumors. By G. W. Woolley, J. J. Harris, P. C. Merker, and M. N. Teller
- The Role of Corticosteroids in the Treatment of Myeloproliferative Disorders and Lymphoma. By E. Polli, S. Eridani, and M. Bianchessi
- Examples of the Action of Steroid Hormones on the Development of Certain Experimental Tumors. By A. Lacassagne

- Stimulating Action of Large and Subphysiological Quantities of Testosterone Propionate on the Growth of Two Transplantable Ovarian Tumors of the Rat: One Spontaneous, One Experimentally Produced. By R. Iglesias
- Estrogens in the Geneses of Mammary Cancer. By O. Mühlbock and L. M. Boot
- Antitumor Activity of Some Enol-Ethers of 5 α -3 Ketosteroids on 3-Methylcholanthrene-Induced Rat Mammary Carcinoma. By G. Briziarelli
- Inhibition of Cell Proliferation by Androgenic Steroids and Its Possible Mechanism. By A. Di Marco, M. Gaetani, M. T. Dasdia and M. Soldati
- Hormones and Humors. By R. A. Cleghorn
- Mating Behavior in the Androgen-Sterilized Female Rat and Its Relation to the Hypothalamic Regulation of Sexual Behavior. By C. A. Barraclough
- Effect of Certain Steroid Hormones on the Sexual Behavior of the Male Rat and an Analysis of their Effect on the Central Nervous System. By A. Soulairac and M. L. Soulairac
- The Selective Accumulation of Estrogens in the Neural and Genital Tissues of the Cat. By R. P. Michael
- Central Nervous System and Behavior: Some Properties of Progesterone. By J. R. Bergen, N. E. Beisaw, D. M. Krus, W. P. Koella and G. Pincus
- Some Considerations on the Relationship between Psychic Disturbances and Endocrinopathies. By N. Canal
- Experimental Design for Studying the Pattern of Central Nervous Activity Steroids. By I. L. Bonta and G. A. Overbeek
- Plasma 17-Hydroxycorticosteroids in Dogs after Whole Body Vibration. By B. B. Blivaiss, R. Litta-Modignani, and I. Priede
- Effects of Whole Body Vibrations of Humans on Plasmatic and Urinary Corticosteroid Levels. By R. Litta-Modignani, E. B. Magid, and B. B. Blivaiss
- Plasma Corticosteroid Changes during Space-Equivalent Decompression in Partial-Pressure Suits and in Supersonic Flight. By H. B. Hale
- Characterization of Hormonal Steroids of the Chimpanzee: Changes Observed in Adrenal Cortical Function during Simulated and Actual Space Flight. By F. Elmadjian and E. Forchielli
- Adaptive Responses of Adrenal Cortex to Some Environmental Stressors, Exercise, and Acceleration. By D. Jovy, H. Brünner, K. E. Klein, and H. M. Wegmann
- Determination of 17-Hydroxycorticosteroids in Plasma. By C. S. Corker, J. K. Norymberski, and R. K. Thow
- The Effect of Protein Binding on the Physiologic Activity of Plasma

- Corticosteroids. By D. H. Nelson, H. Tanney, J. H. Mestman, and V. Gieschen
- Conjugated Estrogen in Human Blood. By E. Diczfalusy
- The Metabolism of $C_{12}O_2$ Steroid Conjugates. By A. E. Kellie
- Variations of the 17-OHCS in the Plasma After Administrations of Pyretogenic Substance. By D. Gelli and M. Lampertico
- Plasma 17-Ketosteroids. By E. E. Baulieu
- Histochemical Studies on Steroid 3β -ol-dehydrogenase and Other Enzymes of the Adrenal Cortex. By C. Cavallero and G. Chiappino
- The Laboratory Diagnosis of Cushing's Syndrome: Preoperative Differentiation between Tumorous and Nontumorous Adrenal Cortical Hyperfunction. By L. J. Soffer
- Enzymatic Defects in Adrenogenital Syndromes. By M. Finkelstein
- Hormonal Investigations in the Polycystic Ovarian Syndrome. By C. Cassano, C. Conti, E. Forchielli, M. Capone, and G. Sorcini
- Biochemical Investigation in Postpuberal Hirsutism. By J. Decourt, M. F. Jayle, and P. Mauvais-Jarvis
- Steroid Metabolism in the Adrenogenital Syndrome and in the Stein-Leventhal Syndrome: Analogies and Differences. By L. E. Piotti, C. Mazzi and E. Ferrari

Contents

CONTRIBUTORS TO VOLUME 1	v
FOREWORD	xi
CONTENTS OF VOLUME 2	xvii

SYMPOSIUM 1

NEW STEROIDS WITH HORMONE-LIKE ACTIVITIES

Inverted Steroids, their Preparation and Biological Activities.	
By J. Jacques and G. Pincus	3
Ether Derivatives of Steroidal Hormones. By A. Ercoli	11
Discussion. The Influence of Enol Etherification on the Biological Activity of Δ^4 -3-Ketosteroids. By B. G. Steinetz and A. Meli	25
New Steroids with Hormone-Like Activities: C-6 Substituted Hormone Analogs. By A. Zaffaroni and A. Bowers	29
Discussion. Pharmacological Aspects of the Study of Chlor-madinone. By G. A. Overbeek	37
Antiandrogenic, Antiestrogenic and Antiovaratory Compounds. By R. I. Dorfman	39
Discussion. By T. Miyake	51
The Actions of "Retro" Progestagens. By H. F. L. Schöler	53
Discussion. Possible Uses of Retrosteroid Derivatives in Humans. By P. M. F. Bishop	65
Biological Properties of 4-Hydroxy-3-Keto- Δ^4 -Steroids. By G. Sala	67
Discussion. Applications of Ring A Modifications of 4-Hydroxy-3-Keto- Δ^4 -Steroids. By G. K. Suchowsky	77

SYMPOSIUM 2

PATHWAYS OF SYNTHESIS AND METABOLISM OF HORMONAL STEROIDS

Some Aspects of Steroid Dynamics. By J. F. Tait, B. Little, S. A. S. Tait, W. P. Black, A. Riondel, and M. Gut	
Discussion. Ring A and Side-chain Reduction Processes in Cortisol Metabolism. By F. Ceresa	81
Interaction of Thyroid with Steroid Hormone Metabolism. By T. F. Gallagher	99
Discussion. Thyroid and Steroid Hormone Metabolism. By A. Vermeulen	103
	111

The Metabolism and Localization in Tissues of Tritium-Labeled Steroid Sex Hormones. By W. H. Pearlman	115
Discussion. Comments on the Biological and Biochemical Aspects of the Experiments. By K. D. Voigt	125
<i>In Vitro</i> Conversion of Deoxycorticosterone to Some Acidic Metabolites. By J. J. Schneider	127
Discussion. <i>In Vitro</i> Conversion of Deoxycorticosterone to Some Acidic Metabolites. By J. K. Grant.	137

SYMPOSIUM 3

CONTROL OF SYNTHESIS AND RELEASE OF STEROID HORMONES

Neurohumoral Factors from the Brainstem and Epiphysis. By G. Farrell, W. M. McIsaac and A. N. Taylor	141
Discussion. By R. Romanelli	149
Interrelationship of Renal and Adrenal Hormones. By F. Gross	153
Discussion. Interrelationship of Renal and Adrenal Hormones. By A. Rivera	165
Hypothalamic Control of the Production of Corticosterone. By F. Tronchetti, V. Marescotti and A. Carnicelli	167
Discussion. Effect of Hypothalamic Lesions. By D. De Wied . .	181
The Regulation of ACTH and Corticosteroid Secretion. By D. M. Hume	185
Discussion. By M. Saffran	197
The Inhibiting Action of Adrenocortical Steroids on ACTH Secretion. By L. Martini, M. Motta, and E. Müller	199
Discussion. Neurosecretion and Control of the Pituitary Gland. By T. F. Leveque	207
Adrenal Cortical Function in Dogs with Central Nervous System Ablations. By R. H. Egdahl	209
Discussion. Hypothalamus and Release of Ovulating Hormone. By M. B. Nikitovitch-Winer	217
Neural Aspects of the Feedback Action of Ovarian Steroids. By B. Flerkó	221
Discussion. Neural Aspects of the Feedback Action of Ovarian Steroids: The Role of Progesterone. By B. T. Donovan . .	231
Electrolytic Irritative Lesions in the Hypothalamus and Other Forebrain Areas: Effects on Luteinizing Hormone Release and the Ovarian Cycle. By J. W. Everett, H. M. Radford, and J. Holsinger	235
Discussion. By G. K. Benson	247
Regulation of Luteinizing Hormone (LH) Secretion by a Hypothalamic LH-Releasing Factor. By S. M. McCann, D. Ramirez, and R. Abrams	251

Discussion. Control of Ovulating Hormone Release. By H. J. Campbell	259
Synthesis and Release of Progesterin by Rabbit Ovary <i>in Vivo</i> . By J. Hilliard and C. H. Sawyer	263
Effects of Hypothalamic Deconnection of the Pituitary Control of Testosterone Secretion. By I. Assenmacher	273
Discussion. Effects of Pituitary Transplantation in Birds. By A. V. Nalbandov	283

SYMPOSIUM 4

MECHANISM OF STEROID ACTION

The Role of Molecular Configuration in the Interaction of Steroid Hormones with Coenzymes and Enzymes. By L. L. Engel, A. M. Stoffyn, and J. F. Scott	291
Discussion. By W. H. Fishman	301
Steroid Metabolism and Steroid Action. By H. J. Ringold	305
Discussion. Adrenal Steroids and Adipose Tissue. By L. Adezati	317
Steroids, Nonsteroids, Intermediary Metabolism, Inflammation and their Probable Interrelationships. By E. M. Glenn	319
Discussion. Aspects of the Anti-inflammatory Action of Prednisolone. By G. Fekete	351
Possible Mode of Action of Adrenocortical Steroids. By I. E. Bush	353
Discussion. Glucocorticoids and Alanine α -Ketoglutarate-Transaminase Activity. By F. Rosen	355
The Mode of Action of Cortisol upon Lymphocytes. By O. Hechter, I. D. K. Halkerston, and J. Eichhorn	359
On Mechanism of Steroid Action at the Molecular Level. By C. A. Villee	375

SYMPOSIUM 5

SUBSTANCES WHICH AFFECT SYNTHESIS AND ACTION OF STEROID HORMONES

Nonhormonal Inhibitors of Adrenocortical Steroid Biosynthesis. By W. W. Tullner	383
Discussion. Nonhormonal Inhibitors of Adrenocortical Steroid Biosynthesis: Clinical Applications. By R. B. Greenblatt, V. B. Mahesh, and S. Roy	397
Studies on Adrenocortical Inhibitors. By J. J. Chart and H. Sheppard	399
Discussion. By A. Kloppner	413
Incremental Modifications Induced by Administration of an Inhibitor of 11β -Hydroxylase (Su-4885) in Different Functional Con-
