Library of Congress Cataloging-in-Publication Data

Names: Krumholz, Mark R., author.

Title: Star formation / Mark R. Krumholz (Australian National University, Australia).

Description: Hackensack, NJ : World Scientific, 2017. | Series: World Scientific series in astrophysics | Includes bibliographical references and index.

Identifiers: LCCN 2016041683 | ISBN 9789813142022 (hard cover ; alk. paper) |

ISBN 9813142022 (hard cover ; alk. paper) | ISBN 9789813142039 (pbk ; alk. paper) |

ISBN 9813142030 (pbk ; alk. paper)

Subjects: LCSH: Stars--Formation.

Classification: LCC QB806 .K78 2017 | DDC 523.8/8--dc23

LC record available at <https://lcn.loc.gov/2016041683>

Star Formation

World Scientific Series in Astrophysics

Series Editor: Amiel Sternberg (*Tel Aviv University, Israel*)

Published

Star Formation

by Mark R Krumholz (Australian National University, Australia)

*Dedicated to my family, Barbara, Alan,
Ethan, and Rebecca, and with thanks to my
students, who have contributed
tremendously to the development of this
book.*

Preface

This book is based on a series of lectures given by the author in his graduate class on star formation, taught from 2009–2016 at the University of California, Santa Cruz and Australian National University. It is intended for graduate students or advanced undergraduates in astronomy or physics, but does not presume detailed knowledge of particular areas of astrophysics (e.g., the interstellar medium or galactic structure). It is intended to provide a general overview of the field of star formation, at a level that would enable a student to begin independent research in the area.

This course covers the basics of star formation, ending at the transition to planet formation. The first two chapters, comprising part I, begin with a discussion of observational techniques, and the basic phenomenology they reveal. The goal is to familiarize students with the basic techniques that will be used throughout, and to provide a common vocabulary for the rest of the course. The next five chapters form part II, and provide a similar review of the basic physical processes that are important for star formation. Part III includes all the remaining chapters. These discuss star formation over a variety of scales, starting with the galactic scale and working our way down to the scales of individual stars and their disks, with slight deviations to discuss the particular problems of the formation of massive stars and of the first stars. The book concludes with the clearing of disks and the transition to planet formation.

The “texts” intended to go with these notes are the review articles “The Big Problems in Star Formation: the Star Formation Rate, Stellar Clustering, and the Initial Mass Function”, Krumholz, M. R., 2014, *Physics Reports*, 539, 49, which provides a snapshot of the theoretical literature, and “Star Formation in the Milky Way and Nearby Galaxies”, Kennicutt, R. C., & Evans, N. J., 2012, *Annual Reviews of Astronomy & Astrophysics*, 50, 531, which is more focused on observations. Another extremely useful reference is the series of review chapters from the Protostars and Planets VI Conference, which took place in July 2013. Suggested background readings to accompany most chapters are listed at the chapter beginning. In addition to these background materials, most chapters also include “suggested literature”: papers from the recent literature whose content is relevant to the material covered in that chapter. These readings are included to help students engage with the active research literature, as well as the more general reviews.

In addition to the text and reading, this book contains five problem sets, which are interspersed with the chapters at appropriate locations. Solutions to the problems are included as an Appendix.

Contents

<i>List of Figures</i>	xiii
<i>Preface</i>	xix
I Introduction and Phenomenology	1
1. Observing the Cold Interstellar Medium	3
1.1 Observing Techniques	3
1.2 Observational Phenomenology	18
2. Observing Young Stars	23
2.1 Individual Stars	23
2.2 Statistics of Resolved Stellar Populations	30
2.3 Unresolved Stellar Populations and Extragalactic Star Formation	33
II Physical Processes	43
3. Chemistry and Thermodynamics	45
3.1 Chemical Processes in the Cold ISM	45

3.2	Thermodynamics of Molecular Gas	54
4.	Gas Flows and Turbulence	63
4.1	Characteristic Numbers for Fluid Flow	63
4.2	Modeling Turbulence	67
4.3	Supersonic Turbulence	72
	Problem Set 1	79
5.	Magnetic Fields and Magnetized Turbulence	83
5.1	Observing Magnetic Fields	83
5.2	Equations and Characteristic Numbers for Magnetized Turbulence	87
5.3	Non-Ideal Magnetohydrodynamics	91
6.	Gravitational Instability and Collapse	99
6.1	The Virial Theorem	99
6.2	Stability Conditions	104
6.3	Pressureless Collapse	115
7.	Stellar Feedback	121
7.1	General Formalism	121
7.2	Momentum-Driven Feedback Mechanisms	126
7.3	(Partly) Energy-Driven Feedback Mechanisms	130
III	Star Formation Processes and Problems	141
8.	Giant Molecular Clouds	143
8.1	Molecular Cloud Masses	144
8.2	Scaling Relations	153
8.3	Molecular Cloud Timescales	157
	Problem Set 2	167
9.	The Star Formation Rate at Galactic Scales: Observations	171

9.1	The Star Formation Rate Integrated Over Whole Galaxies	172
9.2	The Spatially-Resolved Star Formation Rate . .	178
9.3	Star Formation in Dense Gas	187
10.	The Star Formation Rate at Galactic Scales: Theory	193
10.1	The Top-Down Approach	194
10.2	The Bottom-Up Approach	203
11.	Stellar Clustering	215
11.1	Observations of Clustering	215
11.2	Theory of Stellar Clustering	223
12.	The Initial Mass Function: Observations	233
12.1	Resolved Stellar Populations	234
12.2	Unresolved Stellar Populations	245
12.3	Binaries	249
	Problem Set 3	253
13.	The Initial Mass Function: Theory	257
13.1	The Power Law Tail	257
13.2	The Peak of the IMF	263
14.	Protostellar Disks and Outflows: Observations	275
14.1	Observing Disks	276
14.2	Observations of Outflows	285
15.	Protostellar Disks and Outflows: Theory	289
15.1	Disk Formation	289
15.2	Disk Evolution	296
15.3	Outflow Launching	310
16.	Protostar Formation	317
16.1	Thermodynamics of a Collapsing Core	317

16.2	The Protostellar Envelope	325
17.	Protostellar Evolution	333
17.1	Fundamental Theory	333
17.2	Evolutionary Phases for Protostars	342
17.3	Observable Evolution of Protostars	349
	Problem Set 4	357
18.	Massive Star Formation	361
18.1	Observational Phenomenology	362
18.2	Fragmentation	367
18.3	Barriers to Accretion	372
19.	The First Stars	381
19.1	Cosmological Context	382
19.2	Chemistry and Thermodynamics of Primordial Gas	383
19.3	The IMF of the First Stars	388
19.4	The Transition to Modern Star Formation . . .	391
20.	Late-Stage Stars and Disks	399
20.1	Stars Near the End of Star Formation	399
20.2	Disk Dispersal: Observation	405
20.3	Disk Dispersal: Theory	409
21.	The Transition to Planet Formation	419
21.1	Dynamics of Solid Particles in a Disk	419
21.2	From Pebbles to Planetesimals	425
	Problem Set 5	435
A	Statistical Mechanics of Multi-Level Atoms and Molecules	439
A.1	Matter–Radiation Interaction	439

A.2	Statistical Equilibrium for Multi-Level Systems .	442
A.3	Critical Densities for Multi-Level Systems	444
B	Solutions to Problem Sets	447
	Solutions to Problem Set 1	449
	Solutions to Problem Set 2	452
	Solutions to Problem Set 3	463
	Solutions to Problem Set 4	472
	Solutions to Problem Set 5	485
	<i>Bibliography</i>	495
	<i>Index</i>	503

List of Figures

1.1	H ₂ level diagram	4
1.2	Dust absorption opacity	6
1.3	<i>Herschel</i> map of IC 5146	8
1.4	Dust extinction map of the Pipe Nebula	9
1.5	COMPLETE spectra of Ophiuchus and Perseus	17
1.6	Distribution of H ₁ and GMCs in M33	19
1.7	Distribution of CO(1 → 0) emission in M51	20
1.8	¹³ CO(2 → 1) maps of Perseus	21
2.1	Outflow in CO(2 → 1)	25
2.2	Sample SEDs of protostellar cores	26
2.3	Bolometric temperatures of protostellar cores	27
2.4	Measured stellar IMFs in a variety of regions	32
2.5	Bolometric luminosity versus stellar population age . .	36
2.6	Optical spectra of galaxies across the Hubble sequence	38
4.1	Comparison of flows at varying Reynolds numbers . .	67
4.2	Experimental power spectra for Kolmogorov turbulence	72
4.3	Linewidth versus size in the Polaris Flare cloud	74

4.4	Volume rendering of the density field for supersonic turbulence	76
5.1	Sample Zeeman detection of a magnetic field	86
5.2	Comparison of simulations of Alfvénic and sub-Alfvénic turbulence	91
6.1	Magnetic field strength measurements	115
8.1	GMC mass spectra	152
8.2	GMC surface densities	154
8.3	GMC linewidth-size relation	155
8.4	GMC virial ratios	156
8.5	Surface densities of gas and star formation	159
8.6	Surface density of star formation versus surface density of gas normalized by free-fall time	160
8.7	Histogram of distances to nearest GMC	161
8.8	Histogram of stellar ages in IC 348	163
8.9	HI and 24 μm maps of NGC 5194 and 2841	165
9.1	Whole-galaxy Kennicutt–Schmidt relation	174
9.2	Whole-galaxy Kennicutt–Schmidt relation, including orbital time	175
9.3	Kennicutt–Schmidt relation, with additional high-redshift data	176
9.4	Kennicutt–Schmidt relation, orbital time version, with additional high-redshift data	177
9.5	Kennicutt–Schmidt relation, with additional low surface brightness sample	178
9.6	Kennicutt–Schmidt relation for galaxies resolved at $\sim\text{kpc}$ scales	180
9.7	Kennicutt–Schmidt relation normalized by the free-fall time	182
9.8	Kennicutt–Schmidt relation averaged on different size scales in M33	183
9.9	Kennicutt–Schmidt relation for HI gas in inner galaxies	185
