# An Economic Analysis of Conflicts

# Preface

This book has been a product of serendipity. In 2013, I was doing research on the economic and currency crisis that hit Greece in the interwar period and then started to look at economic developments in the 1940s. The lack of statistical data covering the period of Axis Occupation (1941–1945) and the subsequent Civil War (1946–1949) led me to search for studies and reports prepared by the British and US missions in Greece at that time.

Eventually, I visited the US National Archives in Washington DC and asked for some declassified reports that were prepared in the late 1940s by JUSMAG, the Joint US Military Advisory Group to Greece. The material consisted mostly of trivial reports on the economic situation, except that some documents included a systematic recording of all the battles that took place during the Civil War. There were monthly data covering battle casualties and army formations of the guerrillas and the Greek National Army, as well as their geographical dispersion for the period stretching from January 1948 to December 1949.

I couldn't believe my luck. As far as I know, this is one of the very few systematic recordings of a civil war that is available to date, even if recent intrastate conflicts worldwide are taken into account.

Upon returning to Greece, I set about to complete the data series backwards and thus obtain a full record since the start of the Civil War in 1946. To that effect, all available military archives of the Greek Army and a number of reports released by the Communist Party of Greece were classified in a pattern similar to that of the US series. In this way, a complete monthly battle database was obtained for 1946–1947. Additional data covering persecutions of political opponents and the destruction of productive activities during the conflict were also compiled from relevant sources.

Reading the prolific academic literature on civil wars, either contemporary or past ones, I was impressed by the scarcity of quantitative and systematic evidence available on the evolution of specific civil wars over time. The vast majority of empirical work is based on cross-country data. Usually, these series cover total battle casualties and aggregate socio-economic conditions and are subsequently

used in cross-estimates to test alternative hypotheses on intrastate conflicts. Apart from implicitly making the assumption that countries respond to such conflicts in a similar manner, cross-section analysis is not capable of capturing the dynamics of a civil war. The particular patterns each conflict has followed, or the specific conditions under which it broke out or was terminated, are not possible to analyse.

For that reason, I thought that it would perhaps be useful to concentrate on how a civil war can be modelled in a single country. The task involved the derivation of appropriate combat models or a substantial modification of existing ones, as well as setting up a number of econometric procedures so as to properly estimate battle interactions. Then the battle time series available on the Greek conflict were used to test the properties of the dynamic process. Occasionally, some of the model predictions are compared by using the Correlates of Civil War (COCW) database. I hope that the outcome will contribute both to theoretical aspects of modelling conflict situations and to a detailed description and understanding of the dynamic patterns observed in the Greek Civil War. Although motivated by the examination of a civil war in a particular country, this book hopes to offer some analytical tools that are useful in improving the analysis on—and the understanding of—many others.

Athens, Greece  
April 2016

Nicos Christodoulakis

# Acknowledgements

I am deeply obliged to Demetrios Varakis and Christos Triantopoulos for the meticulous compilation of data from Greek military archives. This book would not have been possible without the help, advice and comments received in several seminars in which earlier parts of this research were presented. I thank the participants in seminars held in the Bank of Greece, the London School of Economics, the Athens University of Economics, the Yale University and the Independent Archives of Social History in Athens (ASKI) for their useful remarks and constructive criticism. I also wish to thank the Journal of Defence and Peace Economics for publishing a substantial part of my research on the Greek Civil War, and especially the Editor, Professor Christos Kollias, for his encouragement and suggestions throughout the early research project.

Chapter 2, Sects. 3.7, 4.7, 6.2, 6.3, 7.6, 8.5, 8.7, 9.2, 10.1, 10.2, and Data Appendix are derived, in part, from two articles published in the Journal of Defence and Peace Economics on 28 Jan 2015 and 02 Mar 2015, respectively, available online: <http://dx.doi.org/10.1080/10242694.2014.1000010>, <http://dx.doi.org/10.1080/10242694.2015.1016297>

# Abbreviations

COCW	Correlates of Civil War
DAG	Democratic Army of Greece
GCW	Greek Civil War
GDP	Gross Domestic Product
GNA	Greek National Army
HQ	Headquarters
JUSMAG	Joint US Military Advisory Group to Greece
KKE	The Communist Party of Greece
SIPRI	Stockholm International Peace Research Institute
UK	United Kingdom
US	United States of America
USSR	The Soviet Union
WW1	First World War
WW2	Second World War

## Mathematical

i.i.d.	independent and identically distributed
LHS	left-hand side
OLS	ordinary least squares
RHS	right-hand side
SUR	seemingly unrelated regression
w.r.t.	with respect to

# List of Figures

Fig. 2.1	Total battle-casualties and battle-deaths. <i>Notes:</i> (Upper graph, Rhs) and (marked graph, Lhs) respectively. Period 1946:01–1949:12. The beginning of Civil War is marked in July 1946 and its end in August 1949. The <i>shaded area</i> in 1948 marks a structural break into two phases. <i>Source:</i> Data are described in Appendix and listed in Table 11. 1	17
Fig. 2.2	The size of GNA and DAG armies. <i>Notes:</i> Lhs and Rhs respectively. January 1947–December 1949. <i>Source:</i> Data described in Appendix and Table 11. 1	20
Fig. 2.3	The costs of military aid delivered to Greece for GNA. <i>Source:</i> JUSMAGG 1949. Diagram funds and costs, greek military aid program, ground and air	21
Fig. 2.4	Military and non-military aid delivered to DAG. <i>Source:</i> Marantzidis (2010)	22
Fig. 3.1	Army formations for the guerrilla and the government armies	30
Fig. 4.1	(a) Likely peace. <i>Note:</i> Combinations of inclusion and repression to avoid a conflict are in the <i>shaded area</i> . (b) Unlikely peace. <i>Note:</i> The <i>shaded area</i> offers only a narrow combination of inclusion and repression	45
Fig. 4.2	The effect of repression on guerrillas’ entry threshold. <i>Notes:</i> For illustration purposes, parameter values are set at $m_1 = 0.80$ , $m_2 = 0.90$ , $V_1 = 20$ , $L_1 = 5$ , $w_1 = 2.5$ , $A_1 = 0.90$ , $A_2 = 1$ . Government army is normalized to $q = 1$ . The low, medium and high reprisal levels are set at $D_1 = 8, 9$ and $10$ respectively. For low reprisals, the threshold for entering the conflict is at $r_{MIN} = 0.28$ , implying that a conflict may be viable only if guerrillas gather more than 28 % of the state forces. Raising repression to a medium level the cut-off rises to 0.58, while for higher levels there is no feasible threshold, and the conflict is abandoned	48

Fig. 4.3	Combinations of inclusion and repression. <i>Notes:</i> Average years of education in 17 European countries versus an index of non-participation in trade unions in the interwar period. <i>Source:</i> Data as in Table 11. 4 (Appendix). The repression index is obtained as the simple inverse of union members/total population, in logarithmic scale .....	53
Fig. 4.4	Total prosecutions and death penalties. <i>Source:</i> Michiotis (2007, Tables 1 and 2, pp. 235–236) .....	55
Fig. 5.1	Positive conflict equilibria .....	76
Fig. 5.2	Parameter areas for positive conflict equilibria .....	76
Fig. 7.1	The army formation process .....	97
Fig. 7.2	Equilibrium locus for the guerrilla army .....	102
Fig. 7.3	Saddle-path equilibrium of the guerrilla army .....	103
Fig. 7.4	Reaction to a permanent rise of the state army. <i>Notes:</i> After the initial jump to $\Sigma_1$ , adjustment takes place along the saddle-path $\Sigma_1\Sigma^{**}$ . The guerrilla army suffers more casualties and is reduced in size .....	104
Fig. 7.5	Probability density function of the battle-loss index. <i>Notes:</i> Data are battle-deaths suffered by the guerrillas (R) and state army (Q) per thousand of country's population (N) and per month of conflict duration (k). In logs. <i>Sources</i> as Table 7.1 .....	109
Fig. 7.6	The battle-loss index in 115 civil wars, 1900–2007. <i>Notes:</i> The parallel lines are at two standard errors from the main regression. <i>Sources</i> as in Table 7.1 .....	110
Fig. 7.7	The locus of the guerrilla army during Phase I. <i>Source:</i> Data for the period 1946:7–1947:12 .....	112
Fig. 7.8	The locus of the guerrilla army during Phase II. <i>Notes:</i> Data cover the period of the Greek Civil War 1948:1–1949:12. In the last months of the war, the locus had fallen within the <i>shaded area</i> shown in Fig. 7.2 .....	112
Fig. 8.1	Optimal tax rate for different levels of enforcement effectiveness. <i>Notes:</i> The vertical axis measures the LHS and the RHS of Eq. (8.8a). Parameters are set as $\lambda = 50$ , $\beta = 0.2$ . For illustration, weaker enforcement ( <i>dotted line</i> ) described by setting $\lambda = 10$ .....	120
Fig. 8.2	Growth-maximizing tax rates and property rights enforcement. <i>Notes:</i> Parameters are set as $\lambda = 100$ , $\beta = 0.2$ , $A = 0.32$ , $\delta = 10\%$ , $\theta = 5\%$ , $\sigma = 0.80$ . Weaker enforcement ( <i>dotted line</i> ) at $\lambda = 50$ . Full protection of property rights ( <i>marked line</i> ) is obtained as $\lambda \rightarrow \infty (\omega = 0)$ .....	120

Fig. 8.3 Shares of public expenditure, Greece 1948–1970. *Notes:* A surge in defense spending occurred again in 1967, when a military dictatorship was imposed in Greece. *Source:* Kalafatis and Prontzas (2015). Table 85, p. 299 ..... 128

Fig. 8.4 A schematic representation of GDP recovery. (a) With Civil War casualties and persecutions as actually happened. (b) Counterfactual termination of hostilities in June 1949 ..... 129

Fig. 9.1 Actual and forecasted GDP for Nazi-occupied countries (a) Belgium, (b) Netherlands, (c) Denmark, (d) Norway ..... 140

Fig. 9.2 Actual and potential GDP for Greece 1946–1960. Actual GDP is denoted by simple line; the hypothetical GDP estimated by using four occupied countries (YHP\_4) is denoted by asterisks; the one estimated by using five occupied countries (YHP\_5) by circles. GDP is expressed in thousands of US Dollars at 1990 prices. The shaded area is a measure of the failure of Greece to follow other European states in postwar reconstruction ..... 141
