Modern Fourier Analysis

Third Edition

Author's Address:

Colin Adams, Williams College, Williamstown, MA, USA
 Alberto Adami, University of British Columbia, Vancouver, BC, Canada
 Mark C. Bennett, Boston University, Boston, MA, USA
 John B. Conjecture, University of Texas at Austin, Austin, TX, USA
 Roger E. Howe, Yale University, New Haven, CT, USA
 David J. Evans, Massachusetts Institute of Technology, Cambridge, MA, USA
 Jeffrey C. Lagarias, University of Michigan, Ann Arbor, MI, USA
 William L. Lawton, University of Wisconsin, Madison, WI, USA
 John J. Littlewood, University of Cambridge, Cambridge, UK
 John J. O'Connor, University of Cambridge, Cambridge, UK
 John J. O'Connor, University of Cambridge, Cambridge, UK

Graduate Texts in Mathematics bridge the gap between passive study and creative understanding, offering constant-level motivation to advanced topics in mathematics. The volumes are carefully written as teaching aids and highlight classroom use. Although these books are frequently used as textbooks in graduate courses, they are also suitable for individual study.

This reprint has been authorized by Springer Science & Business Media for distribution in China Mainland only and not for export therefrom.

Preface

I am truly glad to have had the opportunity to write the present third edition of this book, which is a sequel to GTM 249 *Classical Fourier Analysis, 2nd Edition*. This edition was born from a desire to add a new chapter on wavelets, and to add a new chapter on the theory of distributions. I am very fortunate that diligent readers across the globe have shared with me numerous corrections and suggestions for improvements.

Based on my experience as a graduate student, I decided to include great detail in the proofs presented. I hope that this will not make the reading unwieldy. First time readers may prefer to skim through the technical aspects of the presentation and concentrate on the flow of ideas.

This second volume *Modern Fourier Analysis* is addressed to graduate students who wish to delve deeper into Fourier analysis. I believe that after completing a study of this text, a student will be prepared to begin research in the topics covered by the book. While there is much material that can be covered in a semester course, the list of sections that could be taught in a semester without affecting the logical coherence of the book is, 1.1, 1.2, 1.3, 2.1, 2.2, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3, and 5.1.

In such a large piece of work, it is impossible to have no mistakes or omissions. I encourage you to send your corrections to me directly (grafakos@missouri.edu). The website

<http://math.missouri.edu/~loukas/FourierAnalysis.html>

will be updated with any significant corrections. Solutions to all of the exercises for the present edition will be available to instructors who teach a course out of this book.

Athens, Greece,

Loukas Grafakos

March 2014

Preface

I am truly elated to have had the opportunity to write the present third edition of this book, which is a sequel to GTM 249 *Classical Fourier Analysis, 3rd Edition*. This edition was born from my desire to improve the exposition, to fix a few inaccuracies, and to add a new chapter on multilinear operators. I am very fortunate that diligent readers across the globe have shared with me numerous corrections and suggestions for improvements.

Based on my experience as a graduate student, I decided to include great detail in the proofs presented. I hope that this will not make the reading unwieldy. First time readers may prefer to skim through the technical aspects of the presentation and concentrate on the flow of ideas.

This second volume *Modern Fourier Analysis* is addressed to graduate students who wish to delve deeper into Fourier analysis. I believe that after completing a study of this text, a student will be prepared to begin research in the topics covered by the book. While there is more material than can be covered in a semester course, the list of sections that could be taught in a semester without affecting the logical coherence of the book is: 1.1, 1.2, 1.3, 2.1, 2.2, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3, and 5.1.

In such a large piece of work, it is impossible to have no mistakes or omissions. I encourage you to send your corrections to me directly (grafakosl@missouri.edu). The website

<http://math.missouri.edu/~loukas/FourierAnalysis.html>

will be updated with any significant corrections. Solutions to all of the exercises for the present edition will be available to instructors who teach a course out of this book.

Athens, Greece,
March 2014

Loukas Grafakos

Acknowledgments

I am extremely fortunate that several people have pointed out errors, misprints, and omissions in the previous three editions of the books in this series. All these individuals have provided me with invaluable help that resulted in the improved exposition of the text. For these reasons, I would like to express my deep appreciation and sincere gratitude to all the following people.

First edition acknowledgments: Georgios Alexopoulos, Nakhlé Asmar, Bruno Calado, Carmen Chicone, David Cramer, Geoffrey Diestel, Jakub Duda, Brenda Frazier, Derrick Hart, Mark Hoffmann, Steven Hofmann, Helge Holden, Brian Hollenbeck, Petr Honzík, Alexander Iosevich, Tunde Jakab, Svante Janson, Ana Jiménez del Toro, Gregory Jones, Nigel Kalton, Emmanouil Katsoprinakis, Dennis Kletzing, Steven Krantz, Douglas Kurtz, George Lobell, Xiaochun Li, José María Martell, Antonios Melas, Keith Mersman, Stephen Montgomery-Smith, Andrea Nahmod, Nguyen Cong Phuc, Krzysztof Oleszkiewicz, Cristina Pereyra, Carlos Pérez, Daniel Redmond, Jorge Rivera-Noriega, Dmitriy Ryabogin, Christopher Sansing, Lynn Savino Wendel, Shih-Chi Shen, Roman Shvidkoy, Elias M. Stein, Atanas Stefanov, Terence Tao, Erin Terwilleger, Christoph Thiele, Rodolfo Torres, Deanie Tourville, Nikolaos Tzirakis, Don Vaught, Igor Verbitsky, Brett Wick, James Wright, and Linqiao Zhao.

Second edition acknowledgments: Marco Annoni, Pascal Auscher, Andrew Bailey, Dmitriy Bilyk, Marcin Bownik, Juan Caverio de Carondelet Fiscowich, Leonardo Colzani, Simon Cowell, Mita Das, Geoffrey Diestel, Yong Ding, Jacek Dziubanski, Frank Ganz, Frank McGuckin, Wei He, Petr Honzík, Heidi Hulsizer, Philippe Jaming, Svante Janson, Ana Jiménez del Toro, John Kahl, Cornelia Kaiser, Nigel Kalton, Kim Jin Myong, Doowon Koh, Elena Koutcherik, David Kramer, Enrico Laeng, Sungyun Lee, Qifan Li, Chin-Cheng Lin, Liguang Liu, Stig-Olof Londen, Diego Maldonado, José María Martell, Mieczysław Mastyło, Parasar Mohanty, Carlo Morpurgo, Andrew Morris, Mihail Mourgoglou, Virginia Naibo, Tadahiro Oh, Marco Peloso, Maria Cristina Pereyra, Carlos Pérez, Humberto Rafeiro, Maria Carmen Reguera Rodríguez, Alexander Samborskiy, Andreas Seeger, Steven Senger, Sumi Seo, Christopher Shane, Shu Shen, Yoshihiro Sawano, Mark Spencer,

Vladimir Stepanov, Erin Terwilleger, Rodolfo H. Torres, Suzanne Tourville, Ignacio Uriarte-Tuero, Kunyang Wang, Huoxiong Wu, Kôzô Yabuta, Takashi Yamamoto, and Dachun Yang.

Third edition acknowledgments: Marco Annoni, Vinita Arokianathan, Mark Ashbaugh, Daniel Azagra, Andrew Bailey, Árpád Bényi, Dmitriy Bilyk, Nicholas Boros, Almut Burchard, María Carro, Jameson Cahill, Juan Caverio de Carondelet Fiscowich, Andrea Fraser, Shai Dekel, Fausto Di Biase, Zeev Ditzian, Jianfeng Dong, Oliver Dragičević, Sivaji Ganesh, Friedrich Gesztesy, Piotr Hajłasz, Danqing He, Andreas Heinecke, Steven Hofmann, Takahisa Inui, Junxiong Jia, Hans Koelsch, Richard Laugesen, Kaitlin Leach, Andrei Lerner, Yiyu Liang, Calvin Lin, Liguang Liu, Chao Lu, Richard Lynch, Diego Maldonado, Lech Maligranda, Mieczysław Mastyło, Mariusz Mirek, Carlo Morpurgo, Virginia Naibo, Hanh Van Nguyen, Seungly Oh, Tadahihiro Oh, Yusuke Oi, Lucas da Silva Oliveira, Hesam Oveys, Manos Papadakis, Marco Peloso, Carlos Pérez, Jesse Peterson, Dmitry Prokhorov, Amina Ravi, Maria Carmen Reguera Rodríguez, Yoshihiro Sawano, Mirye Shin, Javier Soria, Patrick Spencer, Marc Strauss, Krystal Taylor, Naohito Tomita, Suzanne Tourville, Rodolfo H. Torres, Fujioka Tsubasa, Ignacio Uriarte-Tuero, Brian Tuomanen, Shibi Vasudevan, Michael Wilson, Dachun Yang, Kai Yang, Yandan Zhang, Fayou Zhao, and Lifeng Zhao.

Among all these people, I would like to give special thanks to an individual who has studied extensively the two books in the series and has helped me more than anyone else in the preparation of the third edition: Danqing He. I am indebted to him for all the valuable corrections, suggestions, and constructive help he has provided me with in this work. Without him, these books would have been a lot poorer.

Finally, I would also like to thank the University of Missouri for granting me a research leave during the academic year 2013-2014. This time off enabled me to finish the third edition of this book on time. I spent my leave in Greece.

Contents

1	Smoothness and Function Spaces	1
1.1	Smooth Functions and Tempered Distributions	1
1.1.1	Space of Tempered Distributions Modulo Polynomials	2
1.1.2	Calderón Reproducing Formula	5
	Exercises	7
1.2	Laplacian, Riesz Potentials, and Bessel Potentials	9
1.2.1	Riesz Potentials	10
1.2.2	Bessel Potentials	13
	Exercises	17
1.3	Sobolev Spaces	20
1.3.1	Definition and Basic Properties of General Sobolev Spaces	21
1.3.2	Littlewood–Paley Characterization of Inhomogeneous Sobolev Spaces	25
1.3.3	Littlewood–Paley Characterization of Homogeneous Sobolev Spaces	29
	Exercises	32
1.4	Lipschitz Spaces	34
1.4.1	Introduction to Lipschitz Spaces	34
1.4.2	Littlewood–Paley Characterization of Homogeneous Lipschitz Spaces	39
1.4.3	Littlewood–Paley Characterization of Inhomogeneous Lipschitz Spaces	45
	Exercises	49
2	Hardy Spaces, Besov Spaces, and Triebel–Lizorkin Spaces	55
2.1	Hardy Spaces	55
2.1.1	Definition of Hardy Spaces	56
2.1.2	Quasi-norm Equivalence of Several Maximal Functions	59
2.1.3	Consequences of the Characterizations of Hardy Spaces	73

2.1.4	Vector-Valued H^p and Its Characterizations	79
2.1.5	Singular Integrals on vector-valued Hardy Spaces	81
	Exercises	87
2.2	Function Spaces and the Square Function Characterization of Hardy Spaces	90
2.2.1	Introduction to Function Spaces	91
2.2.2	Properties of Functions with Compactly Supported Fourier Transforms	93
2.2.3	Equivalence of Function Space Norms	97
2.2.4	The Littlewood–Paley Characterization of Hardy Spaces ...	101
	Exercises	105
2.3	Atomic Decomposition of Homogeneous Triebel–Lizorkin Spaces	107
2.3.1	Embeddings and Completeness of Triebel–Lizorkin Spaces	107
2.3.2	The Space of Triebel–Lizorkin Sequences	109
2.3.3	The Smooth Atomic Decomposition of Homogeneous Triebel–Lizorkin Spaces	109
2.3.4	The Nonsmooth Atomic Decomposition of Homogeneous Triebel–Lizorkin Spaces	114
2.3.5	Atomic Decomposition of Hardy Spaces	120
	Exercises	124
2.4	Singular Integrals on Function Spaces	127
2.4.1	Singular Integrals on the Hardy Space H^1	127
2.4.2	Singular Integrals on Besov–Lipschitz Spaces	130
2.4.3	Singular Integrals on $H^p(\mathbf{R}^n)$	131
2.4.4	A Singular Integral Characterization of $H^1(\mathbf{R}^n)$	141
	Exercises	148
3	<i>BMO</i> and Carleson Measures	153
3.1	Functions of Bounded Mean Oscillation	153
3.1.1	Definition and Basic Properties of <i>BMO</i>	154
3.1.2	The John–Nirenberg Theorem	160
3.1.3	Consequences of Theorem 3.1.6	164
	Exercises	166
3.2	Duality between H^1 and <i>BMO</i>	167
	Exercises	172
3.3	Nontangential Maximal Functions and Carleson Measures	172
3.3.1	Definition and Basic Properties of Carleson Measures	173
3.3.2	<i>BMO</i> Functions and Carleson Measures	178
	Exercises	181
3.4	The Sharp Maximal Function	184
3.4.1	Definition and Basic Properties of the Sharp Maximal Function	184
3.4.2	A Good Lambda Estimate for the Sharp Function	185

3.4.3	Interpolation Using <i>BMO</i>	190
3.4.4	Estimates for Singular Integrals Involving the Sharp Function	191
	Exercises	194
3.5	Commutators of Singular Integrals with <i>BMO</i> Functions	196
3.5.1	An Orlicz-Type Maximal Function	197
3.5.2	A Pointwise Estimate for the Commutator	200
3.5.3	L^p Boundedness of the Commutator	203
	Exercises	204
4	Singular Integrals of Nonconvolution Type	209
4.1	General Background and the Role of <i>BMO</i>	209
4.1.1	Standard Kernels	210
4.1.2	Operators Associated with Standard Kernels	215
4.1.3	Calderón–Zygmund Operators Acting on Bounded Functions	221
	Exercises	223
4.2	Consequences of L^2 Boundedness	225
4.2.1	Weak Type $(1, 1)$ and L^p Boundedness of Singular Integrals	225
4.2.2	Boundedness of Maximal Singular Integrals	228
4.2.3	$H^1 \rightarrow L^1$ and $L^\infty \rightarrow BMO$ Boundedness of Singular Integrals	231
	Exercises	234
4.3	The $T(1)$ Theorem	236
4.3.1	Preliminaries and Statement of the Theorem	236
4.3.2	The Proof of Theorem 4.3.3	239
4.3.3	An Application	254
	Exercises	255
4.4	Paraproducts	257
4.4.1	Introduction to Paraproducts	258
4.4.2	L^2 Boundedness of Paraproducts	260
4.4.3	Fundamental Properties of Paraproducts	261
	Exercises	267
4.5	An Almost Orthogonality Lemma and Applications	268
4.5.1	The Cotlar–Knapp–Stein Almost Orthogonality Lemma	269
4.5.2	An Application	273
4.5.3	Almost Orthogonality and the $T(1)$ Theorem	275
4.5.4	Pseudodifferential Operators	279
	Exercises	281
4.6	The Cauchy Integral of Calderón and the $T(b)$ Theorem	283
4.6.1	Introduction of the Cauchy Integral Operator along a Lipschitz Curve	284
4.6.2	Resolution of the Cauchy Integral and Reduction of Its L^2 Boundedness to a Quadratic Estimate	288

4.6.3	A Quadratic $T(1)$ Type Theorem	292
4.6.4	A $T(b)$ Theorem and the L^2 Boundedness of the Cauchy Integral	297
	Exercises	300
4.7	Square Roots of Elliptic Operators	302
4.7.1	Preliminaries and Statement of the Main Result	303
4.7.2	Estimates for Elliptic Operators on $\mathbf{R}^n$	304
4.7.3	Reduction to a Quadratic Estimate	307
4.7.4	Reduction to a Carleson Measure Estimate	309
4.7.5	The $T(b)$ Argument	315
4.7.6	Proof of Lemma 4.7.9	317
	Exercises	322
5	Boundedness and Convergence of Fourier Integrals	327
5.1	The Multiplier Problem for the Ball	328
5.1.1	Sprouting of Triangles	328
5.1.2	The counterexample	331
	Exercises	338
5.2	Bochner–Riesz Means and the Carleson–Sjölin Theorem	339
5.2.1	The Bochner–Riesz Kernel and Simple Estimates	339
5.2.2	The Carleson–Sjölin Theorem	342
5.2.3	The Kakeya Maximal Function	348
5.2.4	Boundedness of a Square Function	350
5.2.5	The Proof of Lemma 5.2.5	352
	Exercises	355
5.3	Kakeya Maximal Operators	357
5.3.1	Maximal Functions Associated with a Set of Directions	357
5.3.2	The Boundedness of $\mathcal{M}_{\Sigma_N}$ on $L^p(\mathbf{R}^2)$	359
5.3.3	The Higher-Dimensional Kakeya Maximal Operator	366
	Exercises	373
5.4	Fourier Transform Restriction and Bochner–Riesz Means	375
5.4.1	Necessary Conditions for $R_{p \rightarrow q}(S^{n-1})$ to Hold	376
5.4.2	A Restriction Theorem for the Fourier Transform	378
5.4.3	Applications to Bochner–Riesz Multipliers	381
5.4.4	The Full Restriction Theorem on $\mathbf{R}^2$	385
	Exercises	391
5.5	Almost Everywhere Convergence of Bochner–Riesz Means	392
5.5.1	A Counterexample for the Maximal Bochner–Riesz Operator	392

Chapter 1

Smoothness and Function Spaces

We embark on the study of smoothness with a quick examination of differentiability properties of functions. There are several ways to measure differentiability and numerous ways to quantify smoothness. In this chapter we measure smoothness using the Laplacian, which is easily related to the Fourier transform. This relation becomes the foundation of a very crucial and deep connection between smoothness and Littlewood–Paley theory.

Certain spaces of functions are introduced to serve the purpose of measuring and fine-tuning smoothness. The main function spaces we study in this chapter are Sobolev and Lipschitz spaces. Before undertaking their study, we introduce relevant notation and we review basic facts about smooth functions and tempered distributions.

1.1 Smooth Functions and Tempered Distributions

We denote by $\mathbf{R}^n$ the Euclidean space of n tuples of real numbers. The magnitude of a point $x = (x_1, \dots, x_n) \in \mathbf{R}^n$ is $|x| = (x_1^2 + \dots + x_n^2)^{1/2}$. An open ball centered at $x_0 \in \mathbf{R}^n$ of radius $R > 0$ is denoted by $B(x_0, R)$. The partial derivative of a function f on $\mathbf{R}^n$ with respect to the j th variable x_j is denoted by $\partial_j f$. The m th partial derivative with respect to the j th variable is denoted by $\partial_j^m f$. The *gradient* of a function f is the vector $\nabla f = (\partial_1 f, \dots, \partial_n f)$. A *multi-index* α is an ordered n -tuple of nonnegative integers. Given α, β multi-indices, we write $\alpha \leq \beta$ if $\alpha_j \leq \beta_j$ for all $j = 1, \dots, n$. For a multi-index $\alpha = (\alpha_1, \dots, \alpha_n)$, $\partial^\alpha f$ denotes the derivative $\partial_1^{\alpha_1} \dots \partial_n^{\alpha_n} f$. If $\alpha = (\alpha_1, \dots, \alpha_n)$ is a multi-index, then the number $|\alpha| = \alpha_1 + \dots + \alpha_n$ is called the *size* of α and indicates the *total order of differentiation* of $\partial^\alpha f$. The space of functions in $\mathbf{R}^n$ all of whose derivatives of order at most $N \in \mathbf{Z}^+$ are continuous is denoted by $\mathcal{C}^N(\mathbf{R}^n)$ and the space of all *infinitely differentiable functions* on $\mathbf{R}^n$ by $\mathcal{C}^\infty(\mathbf{R}^n)$. The space of smooth functions with compact support on $\mathbf{R}^n$ is denoted by $\mathcal{C}_0^\infty(\mathbf{R}^n)$. The class of Schwartz functions $\mathcal{S}(\mathbf{R}^n)$ is the space of all $\mathcal{C}^\infty(\mathbf{R}^n)$ functions all of whose
