## ( 編輯前言 )

本書的性質，著重於結構例題之演算，其內容分為二部分，上篇以靜定結構為主，下篇則全為超靜定結構問題。綜書除了結構動力及矩陣結構解法外，其他一般結構問題的演算方法，大體均涵涉之。

本書既屬題解之作，編者對於解題的正確性，不得不謹慎，以求作法之完整。或謂題解之作，本屬為學之末，然而編者之意以為若能對初習者略盡旁輔之功，則此書亦不失為一求學的進階了，又本書係以林柏堅教授所著結構學為藍本，同時編者建議初習者，在演算本書習題時，能參考下列書目：

1. Timoshenko and Young 著 Theory of structures.
2. Sutherland Bowman 著 structures Theory.
3. Norries and Wilbur 著 elementary structure Analysis.
4. 左利時教授著結構學。
5. Yuan - Yu HSIEH 著 elementary Theory of structures.

編者 謹識

# 目錄

## 上篇

|     |             |     |
|-----|-------------|-----|
| 第一章 | 緒論·····     | 1   |
| 第二章 | 平面桁架分析····· | 38  |
| 第三章 | 圖解力學·····   | 60  |
| 第四章 | 勢力線·····    | 71  |
| 第五章 | 結構變位·····   | 92  |
| 第六章 | 空間結構·····   | 109 |

## 下篇

|     |               |     |
|-----|---------------|-----|
| 第一章 | 彈性應變能及應用····· | 113 |
| 第二章 | 超靜定桁架分析·····  | 123 |
| 第三章 | 剛架理論·····     | 131 |
| 第四章 | 彎矩與扭力·····    | 227 |
| 第五章 | 拱理論·····      | 238 |

# 第一章 緒論

## 第一章 緒 論 1

1-1 求下列圖示各支點之反力。圖中桿間或交點有小圖圈者，表示鉸接（hinge）。

(1)

$$\Sigma M_D = 0 \quad \text{設 } V_A \text{ 向上}$$

$$2 \times 2 - 1 \times 1 - V_A \times 4 = 0$$

$$\text{得 } V_A = \frac{3}{4}t \text{ (向上)}$$

$$\text{故 } V_D = 2 - \frac{3}{4} = \frac{5}{4}t \text{ (向上)}$$

$$\text{又 } \frac{V_D}{H_D} = \frac{2}{1} \quad \text{故 } H_D = \frac{5}{8}t \text{ (向左)}$$

$$\text{由平衡關係，得 } H_A = 1 - \frac{5}{8} = \frac{3}{8}t \text{ (向左)}$$

(2)

設反力  $V_B$  向下

$$\Sigma M_A = 0 \quad \frac{1}{2} \times 2 - V_B \times 6 = 0$$

$$\text{得 } V_B = \frac{1}{6}t \text{ (向下)}$$

## 2 結構學精要

則  $V_A = \frac{1}{6} t$  (向上)       $H_A = \frac{t}{2}$  (向右)

(3)

take CD 爲 free body

則另一 free body ABCD

於上圖,  $\Sigma M_A = 0$

$$\frac{3}{4} \times 2 - \frac{7}{4} \times 6 + H_B \times 0.3 = 0$$

得  $H_B = 30 t$  (向左)

由外力平衡,  $H_A = 30 t$  (向右)

$V_A = 1 t$  (向上)

(4)

take  $ACB$  之 free body

$$\Sigma M_A = 0$$

$$1 \times 2 + \frac{4}{5} \times 0.25 - \frac{3}{5} \times 2 - V_B \times 5 = 0$$

得  $V_B = 0.2t$  (向上), 則  $V_A = 0.2t$  (向上)

$$\text{又 } \frac{H_B}{V_B} = \frac{1}{2} \quad \text{得 } H_B = 0.1t \text{ (向左)}$$

由外力平衡得  $H_A = 0.7t$  (向左)

(5)

(5)

take  $CD$  爲 free body

$$\Sigma M_D = 0 \quad \text{得}$$

$$\left(\frac{1}{2} \times 2\right) \times 1 = V_C \times 2 \quad V_C = \frac{t}{2} \text{ (向上)}$$

則由下列各 free body 解出  $V_B$ 。

$AB$  free body 中  $\Sigma M_A = 0$

$$\text{得 } 1 \times 2 - \frac{1}{2} \times 4 - V_B \times 5 + 1.125 \times 6 + 0.375 \times 8 = 0$$

得  $V_B = 1.95t$  (向上) 則  $V_A = 0.05t$  (向上)

又  $H_A = 0 \quad H_C = 0$

#### 4 結構學精要

(6)

取 AB 為 free body

$$\Sigma M_A = 0$$

$$2 \times 3 - V_E \times 2 = 0$$

$$\text{得 } V_E = 3t \text{ (向上)}$$

$$\text{則 } V_A = 1t \text{ (向下)}$$

再取 CD 為 free body

$$\Sigma M_C = 0$$

$$\text{得 } 3 \times 1 = V_D \times 6$$

$$V_D = \frac{t}{2} \text{ (向上)}$$

$$\text{由外力平衡 } V_C = \frac{5}{2} t \text{ (向上)}$$

(7)

$$\Sigma M_A = 0$$

$$1.2 \times 2 = V_D \times 3.6 \quad \text{得} \quad V_D = \frac{2}{3} t \quad (\text{向上})$$

取  $CD$  爲 free body,  $CD$  桿爲二力肢, 故  $H_D = \frac{3}{4} V_D$

$$\Sigma M_C = 0$$

$$\frac{2}{3} \times 1.5 = H_D \times 2 \quad \text{得} \quad H_D = \frac{1}{2} t \quad (\text{向左})$$

則由外力之平衡

$$\text{得} \quad H_A = 0.7 t \quad (\text{向左})$$

$$V_A = \frac{2}{3} t \quad (\text{向下})$$

(8)

$$\Sigma M_A = 0 \quad \text{設} \quad V_D \text{ 向上}$$

$$500 \times 2.6 - 1000 \times 3 + V_D \times 5 = 0$$

$$\text{得} \quad V_D = 340 \text{ kg} \quad (\text{向上})$$

$$\text{由外力平衡} \quad V_A = 660 \text{ kg} \quad (\text{向上})$$

$$H_A = 500 \text{ kg} \quad (\text{向右})$$

(9)

取  $AC$  爲 free body

# 6 結構學精要

$$\Sigma M_C = 0$$

設  $H_A$  向左

$$300 \times 1 = H_A \times 3$$

得  $H_A = 100 \text{ kg}$  (向左)

則  $H_B = 500 \text{ kg}$  (向右)

整個構架來看  $\Sigma M_A = 0$

$$400 \times 3 + 300 \times 1 = V_B \times 2$$

得  $V_B = 750 \text{ kg}$  (向下)

則  $V_A = 1050 \text{ kg}$  (向上)

(10)

(10)

$\Sigma M_B = 0$  設  $V_D$  向上

$$600 \times 1 - 500 \times 2 + V_D \times 2 = 0$$

得  $V_D = 200 \text{ kg}$  (向上)

由外力平衡  $V_B = 400 \text{ kg}$  (向上)

$H_B = 500 \text{ kg}$  (向左)

(11)

(11)

取 ABC 為 free body

$\Sigma M_C = 0$  設  $V_A$  向上

$$600 \times 1 = V_A \times 3 \text{ 得 } V_A = 200 \text{ kg (向上)}$$

整個構架中  $\Sigma M_D = 0$ , 設  $V_E$  向下

$$600 \times 2 + 400 \times 1 - 200 \times 4 - V_E \times 2 = 0$$

得  $V_E = 400 \text{ kg}$  (向下)

再取  $CE$  爲 free body

$$\Sigma M_c = 0$$

$$400 \times 3 = H_E \times 2 \quad \text{得} \quad H_E = 600 \text{ kg (向右)}$$

由外力平衡得  $H_D = 600 \text{ kg (向左)}$

$$V_D = 1200 \text{ kg (向上)}$$

(12)

$$\Sigma M_c = 0 \quad \text{設 } V_A \text{ 向上}$$

$$1 \times 2 + 1 \times 4 - V_A \times 3 = 0$$

$$\text{得 } V_A = 2t \text{ (向上)} \quad \text{則 } V_C = 1t \text{ (向上)}$$

取  $BC$  爲 free body, 且  $\Sigma M_b = 0$

$$1 \times 2 - 1 \times 2 + H_C \times 2 = 0$$

$$\text{得 } H_C = 0, \quad \text{則 } H_A = 0$$

(13)

先取  $CD$  爲 free body

$$\Sigma M_c = 0 \quad \text{因 } V_D \text{ 通過 } C \text{ 點}$$

$$\text{故 } H_D = 0$$

再取  $BCD$  爲 free body

$$\Sigma M_b = 0$$

$$P \times \frac{l}{2} = V_D \times l \quad \text{得 } V_D = \frac{P}{2} \text{ (向上)}$$

$$\text{則由外力之平衡 } H_A = P \text{ (向左)}$$

# 8 結構學精要

$$V_A = \frac{P}{2} \text{ (向上)}$$

A 點之固定端彎矩為

$$-M_A = P \times \frac{l}{2} + P \times \frac{l}{2} - \frac{P}{2} \times l = \frac{Pl}{2}$$

故  $M_A = -\frac{Pl}{2}$  (逆針向)

(14)

取 AB 為 free body

$$\Sigma M_B = 0 \text{ 得 } H_A \times l = P \times \frac{l}{2} \quad H_A = \frac{P}{2} \text{ (向左)}$$

則  $H_D = \frac{P}{2}$  (向左)

整個構架  $\Sigma M_A = 0$

$$P \times \frac{l}{2} + P \times \frac{l}{2} = V_D \times l$$

得  $V_D = P$  (向上) 則  $V_A = 0$

(15)

$$\Sigma M_A = 0 \quad \text{設 } V_D \text{ 向下}$$

$$P \times l - V_D \times 2l = 0$$

得  $V_D = \frac{P}{2}$  (向下)

由外力平衡

$$\text{得 } V_A = \frac{P}{2} \text{ (向上)}$$

$$H_A = P \text{ (向右)}$$

(16)

取  $EF$  爲 free body

$$\Sigma M_E = 0 \quad 400 \times 2 = V_F \times 4$$

$$\text{得 } V_F = 200 \text{ kg (向上)}$$

取  $CEF$  爲 free body

$$\text{由 } \Sigma M_C = 0 \text{ 知 } H_F = 0$$

則整個構架中  $\Sigma M_D = 0$

$$400 \times 1 - 200 \times 3 = V_A \times 4$$

$$\text{得 } V_A = 50 \text{ kg (向上)}$$

再由  $AB$  之 free body 中  $\Sigma M_B = 0$

$$50 \times 2 = H_A \times 2$$

$$\text{得 } H_A = 50 \text{ kg (向右)}$$

最後，由外力之平衡，得

$$V_D = 150 \text{ kg (向上)}$$

$$H_D = 50 \text{ kg (向左)}$$

(17)

先取  $BC$  爲 free body

$$\Sigma M_B = 0$$

$$500 \times \frac{4}{5} \times 1 = V_C \times 2$$

$$V_C = 200 \text{ kg (向上)}$$

## 10 結構學精要

則  $V_B = 200 \text{ kg}$  (向上)

取  $CDE$  爲 free body

$$\Sigma M_E = 0$$

$$200 \times 3 = V_D \times 2 \quad V_D = 300 \text{ (向上)}$$

則  $V_E = 100 \text{ kg}$  (向下)

整個構架由外力平衡

得  $V_A = 200 \text{ kg}$  (向上)

$$H_A = 500 \times \frac{3}{5} = 300 \text{ kg (向右)}$$

$$M_A = 400 \times 3 - 300 \times 5 + 100 \times 7 = 400 \text{ kg-m (逆針向)}$$

(18)

取  $CD$  爲 free body

$$\Sigma M_C = 0 \quad 600 \times 1.0 = H_D \times 3$$

$H_D = 200 \text{ kg}$  (向右)

取  $BC$  爲 free body

$$\Sigma M_B = 0$$

$$200 \times 3 \times 1.5 = V_C \times 3 \quad \text{得 } V_C = 300 \text{ kg (向上)}$$

則  $V_B = 300 \text{ kg}$  (向上)

$B$  點,  $C$  點之力分別傳至  $AB$  桿及  $CD$  桿

得  $V_D = 900 \text{ kg}$  (向上)

$V_A = 300 \text{ kg}$  (向上)

則整個構架平衡

得  $H_A = 400 \times 3 \div 2 + 200 = 800 \text{ kg}$  (向左)

$$M_A = (400 \times 3 \div 2) \times \frac{3}{3} + 600 \times \frac{3}{2} + 600 \times 4 - 900 \times 3$$

得  $M_A = 1200 \text{ kg-m}$  (逆針向)

(19)

(19)

取  $ABCD$  爲 free body

$$\Sigma M_D = 0 \quad 500 \times 1 = V_A \times 2$$

得  $V_A = 250 \text{ kg}$  (向下)整個構架中  $M_E = 0$ 

$$\text{得 } 500 \times 3 - 250 \times 2 + 500 \times 2 = V_F \times 2$$

$$V_F = 1000 \text{ kg} \text{ (向上)}$$

再取  $DGF$  爲 free body

$$\Sigma M_D = 0 \quad 1000 \times 2 = H_F \times 2$$

$$H_F = 1000 \text{ kg} \text{ (向左)}$$

最後由外力之平衡，得

$$H_E = 0$$

$$V_E = 750 \text{ kg} \text{ (向下)}$$

(20)

(20)

取  $AC$  爲 free body

$$\Sigma M_C = 0 \quad 2 \times 2 = V_A \times 4$$

得  $V_A = 1t$  (向上)再取  $ACB$  爲 free body

$$\Sigma M_C = 0 \quad \text{得 } H_B = 0$$

整個構架中  $\Sigma M_E = 0$

## 12 結構學精要

$$2 \times 2 + 2 \times 6 - 1 \times 8 = V_B \times 4$$

得  $V_B = 2t$  (向上)

由外力之平衡, 得  $H_E = 0$

$$V_E = 1t \text{ (向上)}$$

(21)

先取  $BCD$  爲 free body

$$\Sigma M_B = 0 \quad 1.5 \times 2 = V_D \times 1.5$$

得  $V_D = 2t$  (向上)

再由  $CD$  之 free body  $\Sigma M_C = 0$

$$2 \times 1.5 = H_D \times 2 \quad \text{得 } H_D = 1.5t \text{ (向左)}$$

則由外力之平衡  $H_A = 0$

$$V_A = 0.3 \times 2 \div 2t - 2t$$

得  $V_A = 1.7t$  (向下)

$$M_A = (0.3 \times 2 \div 2) \times \frac{2}{3} + 1.5 \times 2 - 2 \times 3.5$$

得  $M_A = 3.8t - m$  (順針向)

(22)

由右圖

上圖  $\Sigma M_A = 0$

$$4 \times 2 = V_B \times 4 \quad \text{得 } V_B = 2t \text{ (向上)}$$

由外力平衡  $H_A = 4t$  (向左),  $V_A = 2t$  (向下)
