Explanatory Notes

I. Words Collected

The present dictionary compiles abbreviations of technical terms in the fields of science and engineering, including computer sciences, instrumentation, mechanical and electrical engineering, electronics, communications, and aerospace, as well as system or project titles and organization names. Literatures employed as sources of the material are listed at the end of the volume. In selecting the materials to be included preference is made to those more frequently appearing words, but a critical choice left at an editors' discretion.

II. Entries (Abbreviated Words)

1. Entries are found alphabetized on the sequence of the letters, numerals, and signs. The sequence among the signs is (-), (/), (&) in that order. Thus sequences

ABC, A-BC, AB-C, AB/C, AB & C

appear in that order.

2. With special exceptions all the letters are capitalized.

III. Explanatory Phrases

1. The same sequence is employed for explanatory phrases as for the entries except for signs which are disregarded.
2. Abbreviations appearing in explanatory phrases are capitalized except for those which are customarily used otherwise. Examples are Laser, Radar.
3. In explanatory phrases those words which should have (·), (˘), (˙), or (ˆ) attached to them are left as they appear in the source literature, without trying to standardize the presentation.
4. For words other than English their English equivalents are given in parenthesis whenever available.
5. For Non-English entries for which explanatory phrases in their origi-

nal languages are not identified, their explanatory phrases are given in English only, along with the names of the countries of their origins. An example is

BER Homogeneous Boiling Research Reactor (Germany)

IV. Selecting Criteria

1. In selecting a singular or plural form of words appearing in the explanatory phrases, preference is made to the more frequently appearing form. For example,

CP -Control Program (selected)

CP -Control Programs (rejected)

2. If more than two explanatory phrases with common entry are considered to have been derived from a common source, preference is made to those appearing more frequently. For example,

CP -Control Program (selected)

CP -Control Programmer (selected)

CP -Control Programming (rejected)

3. If words in the explanatory phrases have alternatives with slash (/) or hyphen (-) with the same meaning, preference is made to those appearing more frequently. For example,

CAD -Computer Aided Design (selected)

CAD -Computer-Aided Design (rejected)

4. If entries have alternatives with the same explanatory phrases, preference is made to those appearing more frequently. For example,

RD -Research and Development (selected)

R/D -Research and Development (rejected)

R&D -Research and Development (selected)
