Part III Organic Chemical Aspects (Continued)

CHAPTER 10 CHEMICAL PROCEDURES FOR THE SYNTHESIS OF PEPTIDES 763

Introduction

1. Nomenclature and Structure 763
2. Some Naturally Occurring Peptides 771
3. Historical Considerations 776

Classical Methods of Peptide Synthesis

4. Condensations Involving α -Amino Acids or Their Ester Derivatives 782
5. The Diketopiperazine Method 793
6. Acylamino Acid Chlorides and Azides in Peptide Synthesis 804
7. The α -Haloacyl Halide and Related Methods 808
8. The Azlactone Method in the Synthesis of Saturated and Unsaturated Peptides 823
9. Properties of Dehydropeptides and Their Preparation via the Condensation of Amides or Nitriles with α -Keto Acids 843
10. The N-Carboxy- α -amino Acid Anhydride Method 860
11. The Thio-thiazolidone Method 876

Synthetic Peptide Methods Involving Selectively Removable Acyl Blocking Groups

12. General Considerations 883

MASKING OF THE AMINO FUNCTION

13. *p*-Toluenesulfonyl Group 886
14. The Carbobenzoxy and Related Groups 887
15. Phthalyl Group 901
16. Trityl Group 907
17. Trifluoroacetyl Group 911
18. The Phenylthiocarbonyl and Related Groups 916
19. *o*-Nitrophenoxyacetyl and Chloroacetyl Groups 920
20. Formyl Group 920
21. Benzylsulfonyl Group 922

MASKING OF THE CARBOXYL FUNCTION

22. Amino Acid Methyl and Ethyl Esters 925
23. Amino Acid Benzyl Esters 928

PROCEDURES FOR COUPLING ACYLAMINO ACIDS
WITH AMINO ACIDS, PEPTIDES, OR ESTER DE-
RIVATIVES THEREOF

24. Types of Coupling Procedures 943
25. Considerations of Optical Purity 945
26. Azide Method 949
27. Acid Chloride Method 965
28. Mixed Carboxylic Acid Anhydride Procedure 970
29. Mixed Carboxylic-Carbonic Acid Anhydride Method 978
30. Phosphate Anhydrides of Amino Acids and Acylamino Acids 982
31. Methods Involving Substituted Phosphite Ester Intermediates 988
32. Sulfuric Acid Anhydride Method 996
33. Phosphazo Method 999
34. Phosphorus Oxychloride Method 1006
35. N-Carbonyl- α -amino Acid Ester Method 1011
36. Carbodiimide Method 1016
37. N-Acyl-5-oxazolidone Method 1024
38. Active Ester Method 1027
39. Methods Applicable to Amino Acid Residues with Secondary Functional Groups 1048
40. Physical Constants of Acylated Peptide Esters 1108
41. Preparation and Physical Constants of Acylated Amino Acid and Peptide Amides 1110

42. Preparation and Physical Constants of Acylated Peptides (Free Acids) 1158

REMOVAL OF N-ACYL BLOCKING SUBSTITUENTS

43. Preparation and Physical Constants of Peptides, Peptide Esters, Peptide Amides, and Amino Acid Amides 1187
44. Catalytic Hydrogenolysis 1189
45. Chemical Reduction 1239
46. Hydrolytic and Non-hydrolytic Cleavage with Acid 1243
47. Alkaline Hydrolysis and Hydrazinolysis 1249
48. Special Cleavage Methods 1252
49. An Approach to the Determination of the Optical Purity of Peptides 1254

PREPARATION OF SELECTED DERIVATIVES

50. Glutamine and Asparagine 1257
51. O- and N-Phosphoamino Acids and Peptides 1260
52. Benzoylamino Acids 1266
- References 1268

Part IV General Analytical Procedures

CHAPTER 11 ✓ COLORIMETRIC METHODS 1299

1. Introduction 1299
2. Photometric Ninhydrin Method 1301
3. Copper Complex Method 1312
- References 1316

CHAPTER 12 MANOMETRY AND TITRIMETRY 1318

1. Oxidative Degradation of the Amino Acids 1318
2. Reaction with Ninhydrin 1320
3. Reaction with N-Bromosuccinimide 1331
4. Reaction with Nitrous Acid 1332
5. Titrimetric Methods 1340
- References 1343

CHAPTER 13 ISOTOPE DILUTION 1345

1. The Single-Isotope Technique 1345
2. The Double-Isotope Dilution Technique 1348
- References 1349

CHAPTER 14 MICROBIOLOGICAL ASSAY METHODS 1350

1. Introduction 1350
2. Growth Conditions for Lactic Acid-Producing Bacteria 1351
3. Assay Organisms 1354
4. Assay Procedure 1357
5. Evaluation of Method 1361
- References 1364

CHAPTER 15 CHROMATOGRAPHY 1366

1. Introduction 1366
2. Partition Chromatography 1371
3. Paper Chromatography 1376
4. Desalting 1392
5. Color Reactions 1394

ILLUSTRATIVE EXAMPLES OF THE SCOPE OF QUALITATIVE PAPER CHROMATOGRAPHY

6. The Problem of the Natural Occurrence of Norleucine 1398
7. The Problem of the Natural Occurrence of β -Hydroxyglutamic Acid 1399
8. Discovery of Butyric, β -Aminoisobutyric Acid, Methylhistidine, and Felinine 1400
9. Discovery of α -Aminoheptylic Acid 1405
10. Discovery of α,ϵ -Diaminopimelic Acid 1406
11. Discovery of γ -Methyleneglutamine and Related Compounds 1407
12. Discovery of α -Aminopimelic Acid 1409
13. Discovery of γ -Hydroxyglutamic Acid 1410
14. Discovery of Pimelic Acid 1411
15. Discovery of γ -Aminobutyric Acid 1412
16. Discovery of N-Methyl- α -amino Acids 1414
17. Discovery of L-Allohydroxyproline 1415
18. Discovery of Lanthionine 1416
19. Cyclic Imino Acids 1417
20. Tissue Extractives 1418
21. Thyroid Hormone Intermediates and Autoradiography 1425
22. Procedures for Paper Chromatography 1427
23. Determination of Optical Configuration of Amino Acids 1433

24. Starch Columns	1434
25. Countercurrent Distribution	1440
ADSORPTION CHROMATOGRAPHY	
26. Charcoal Column Chromatography	1447
27. Earlier Work on Ion Exchange Resins	1452
28. Displacement Chromatography with Ion Exchange Resins	1456
29. Elution Analysis with Ion Exchange Resins	1461
30. Use of Ion Exchange Chromatography in the Resolution of Amino Acids	1477
31. Isotope Effects in Ion Exchange Chromatography	1479
32. Peptides	1479
33. Ionophoresis	1495
34. Ion Exchange Paper Chromatography	1500
References	1500

CHAPTER 16 SEQUENTIAL ANALYSIS OF PEPTIDES 1512

1. Early Studies on Partial Hydrolysates of Proteins	1512
2. Carnosine, Anserine, and Glutathione	1521
3. More Exact Studies on Partial Hydrolysates of Proteins by the Use of Chromatographic and Other Techniques (Silk, Wool, and Lysozyme)	1524
4. Procedures for Terminal Amino Acid Analysis	1537
N-TERMINAL SEQUENCES (PEPTIDES)	
N-TERMINAL SEQUENCES (PROTEINS)	
C-TERMINAL SEQUENCES	
PROBLEMS OF PARTIAL HYDROLYSIS	
5. Sequences in Peptides	1626
6. The Amino Acid Sequences in Insulin	1665
References	1673

CHAPTER 17 SPECTROPHOTOMETRY 1688

1. Ultraviolet Absorption Spectra	1688
2. Infrared Absorption Spectra	1695
3. Infrared Spectra of Diastereomeric Amino Acids	1706

4. Infrared Spectra of Corresponding Optically Active and Racemic Amino Acids 1710
5. Aqueous Phase Infrared Spectroscopy 1714
6. Raman Spectra 1716
7. Spectral Changes and Ionization 1719
- References 1722

CHAPTER 18 OPTICAL ROTATION 1724

1. General Aspects 1724
2. Mineral Acid to Amino Acid Ratios 1727
3. Influence of the Disulfide Bond on Optical Rotation 1730
4. Procedure for Optical Rotation Measurements 1731
- References 1733

CHAPTER 19 DETERMINATION OF OPTICAL AND STERIC PURITY 1734

1. General Considerations 1734
2. The Use of Oxidases and Decarboxylases 1738
3. Criteria of Purity Suggested by the National Research Council 1742
4. A Brief Recapitulation 1748
- References 1749

Part V Enzymes in Amino Acid Technology

CHAPTER 20 ENZYMES INVOLVED IN THE DETERMINATION, CHARACTERIZATION, AND PREPARATION OF THE AMINO ACIDS 1753

1. Introduction 1753
2. Mammalian Tissue Acylases 1754
3. Preparation and Properties of Renal Acylase I 1755
4. Renal Acylase II 1767
5. Pancreatic Carboxypeptidase 1767
6. Acylases in Microorganisms 1770
7. Renal Amidase 1778
8. Renal D-Amino Acid Oxidase 1782
9. L-Amino Acid Oxidase 1789

- 10. Amino Acid Decarboxylases of Bacterial
Origin 1793
- 11. Arginase 1807
- 12. Aminopeptidase 1808
- References 1812
