PREFACE

This volume is one of a series of carefully selected reprints from the world-renowned *Encyclopedia of Polymer Science and Engineering* designed to provide specific audiences with articles grouped by a central theme. Although the 19-volume Polymer Encyclopedia is widely available, many readers and users of this key reference tool have expressed interest in having selected articles in their specialty collected for handy desk reference or teaching purposes. In response to this need, we have chosen all of the original, complete articles related to engineering properties of polymers and composites to make up this new volume. The full texts, tables, figures, and reference materials from the original work have been reproduced here unchanged. All articles are by industrial or academic experts in their field and the final work represents the result of careful review by competent specialists and the thorough editorial processing of the professional Wiley staff. Introductory information from the Encyclopedia concerning nomenclature, SI units and conversion factors, and related information has been provided as a further guide to the contents for those concerned with the materials aspects of engineering resins and composites.

The contents of this volume include coverage of nearly every aspect of polymeric engineering materials and provide detailed information on methods of manufacture, properties, and uses. Alphabetical organization, extensive cross-references, and a complex index further enhance the utility of this Encyclopedia. The approximately 20 main entries in this Encyclopedia average 18,000 words in length and have been prepared by 30 leading authorities from industries, universities, and research institutes. The contents should be of interest to all those engaged in the manufacture and use of modern, lightweight, tough engineering materials for use in consumer goods, transportation, aerospace, communications, and related industrial activities. The contents include coverage of the newest high performance liquid crystalline materials, a wealth of physical and mechanical data, and standards and specifications for materials. The book should be an important research reference tool, desk-top information resource, and supplementary reading asset for teaching professionals and their students.

J. I. KROSCHWITZ

CONVERSION FACTORS, ABBREVIATIONS, AND UNIT SYMBOLS

SI Units (Adopted 1960)

A new system of measurement, the International System of Units (abbreviated SI), is being implemented throughout the world. This system is a modernized version of the MKSA (meter, kilogram, second, ampere) system, and its details are published and controlled by an international treaty organization (The International Bureau of Weights and Measures) (1).

SI units are divided into three classes:

Base Units

| | |
|--|------------------------|
| length | meter [†] (m) |
| mass [‡] | kilogram (kg) |
| time | second (s) |
| electric current | ampere (A) |
| thermodynamic temperature [§] | kelvin (K) |
| amount of substance | mole (mol) |
| luminous intensity | candela (cd) |

Supplementary Units

| | |
|-------------|----------------|
| plane angle | radian (rad) |
| solid angle | steradian (sr) |

[†]The spellings "metre" and "litre" are preferred by ASTM; however, "-er" is used in the *Encyclopedia*.

[‡]"Weight" is the commonly used term for "mass."

[§]Wide use is made of "Celsius temperature" (*t*) defined by

$$t = T - T_0$$

where *T* is the thermodynamic temperature, expressed in kelvins, and *T*₀ = 273.15 K by definition. A temperature interval may be expressed in degrees Celsius as well as in kelvins.

xii FACTORS, ABBREVIATIONS, AND SYMBOLS

Derived Units and Other Acceptable Units

These units are formed by combining base units, supplementary units, and other derived units (2-4). Those derived units having special names and symbols are marked with an asterisk in the list below:

| <i>Quantity</i> | <i>Unit</i> | <i>Symbol</i> | <i>Acceptable equivalent</i> |
|--|----------------------------|--------------------|------------------------------|
| *absorbed dose | gray | Gy | J/kg |
| acceleration | meter per second squared | m/s ² | |
| *activity (of ionizing radiation source) | becquerel | Bq | 1/s |
| area | square kilometer | km ² | |
| | square hectometer | hm ² | ha (hectare) |
| | square meter | m ² | |
| *capacitance | farad | F | C/V |
| concentration (of amount of substance) | mole per cubic meter | mol/m ³ | |
| *conductance | siemens | S | A/V |
| current density | ampere per square meter | A/m ² | |
| density, mass density | kilogram per cubic meter | kg/m ³ | g/L; mg/cm ³ |
| dipole moment (quantity) | coulomb meter | C·m | |
| *electric charge, quantity of electricity | coulomb | C | A·s |
| electric charge density | coulomb per cubic meter | C/m ³ | |
| electric field strength | volt per meter | V/m | |
| electric flux density | coulomb per square meter | C/m ² | |
| *electric potential, potential difference, electromotive force | volt | V | W/A |
| *electric resistance | ohm | Ω | V/A |
| *energy, work, quantity of heat | megajoule | MJ | |
| | kilojoule | kJ | |
| | joule | J | N·m |
| | electronvolt [†] | eV [†] | |
| | kilowatt hour [†] | kW·h [†] | |
| energy density | joule per cubic meter | J/m ³ | |
| *force | kilonewton | kN | |
| | newton | N | kg·m/s ² |

[†]This non-SI unit is recognized by the CIPM as having to be retained because of practical importance or use in specialized fields (1).

FACTORS, ABBREVIATIONS, AND SYMBOLS xiii

| <i>Quantity</i> | <i>Unit</i> | <i>Symbol</i> | <i>Acceptable equivalent</i> |
|---|---|---|----------------------------------|
| *frequency | megahertz | MHz | |
| | hertz | Hz | 1/s |
| heat capacity, entropy | joule per kelvin | J/K | |
| heat capacity (specific), specific entropy | joule per kilogram kelvin | J/(kg·K) | |
| heat transfer coefficient | watt per square meter kelvin | W/(m ² ·K) | |
| *illuminance | lux | lx | lm/m ² |
| *inductance | henry | H | Wb/A |
| linear density | kilogram per meter | kg/m | |
| luminance | candela per square meter | cd/m ² | |
| *luminous flux | lumen | lm | cd·sr |
| magnetic field strength | ampere per meter | A/m | |
| *magnetic flux | weber | Wb | V·s |
| *magnetic flux density | tesla | T | Wb/m ² |
| molar energy | joule per mole | J/mol | |
| molar entropy, molar heat capacity | joule per mole kelvin | J/(mol·K) | |
| moment of force, torque | newton meter | N·m | |
| momentum | kilogram meter per second | kg·m/s | |
| permeability | henry per meter | H/m | |
| permittivity | farad per meter | F/m | |
| *power, heat flow rate, radiant flux | kilowatt watt | kW W | J/s |
| power density, heat flux density, irradiance | watt per square meter | W/m ² | |
| *pressure, stress | megapascal kilopascal pascal | MPa kPa Pa | N/m ² |
| sound level | decibel | dB | |
| specific energy | joule per kilogram | J/kg | |
| specific volume | cubic meter per kilogram | m ³ /kg | |
| surface tension | newton per meter | N/m | |
| thermal conductivity | watt per meter kelvin | W/(m·K) | |
| velocity | meter per second kilometer per hour | m/s km/h | |
| viscosity, dynamic | pascal second millipascal second | Pa·s mPa·s | |
| viscosity, kinematic | square meter per second square millimeter per second | m ² /s mm ² /s | |

xiv FACTORS, ABBREVIATIONS, AND SYMBOLS

| <i>Quantity</i> | <i>Unit</i> | <i>Symbol</i> | <i>Acceptable equivalent</i> |
|-----------------|------------------|------------------|------------------------------|
| volume | cubic meter | m ³ | |
| | cubic decimeter | dm ³ | L(liter) (5) |
| | cubic centimeter | cm ³ | mL |
| wave number | 1 per meter | m ⁻¹ | |
| | 1 per centimeter | cm ⁻¹ | |

In addition, there are 16 prefixes used to indicate order of magnitude, as follows:

Multiplication

| <i>factor</i> | <i>Prefix</i> | <i>Symbol</i> | <i>Note</i> |
|-------------------|---------------|-----------------|--|
| 10 ¹⁸ | exa | E | ^a Although hecto, deka, deci, and centi are SI prefixes, their use should be avoided except for SI unit-multiples for area and volume and nontechnical use of centimeter, as for body and clothing measurement. |
| 10 ¹⁵ | peta | P | |
| 10 ¹² | tera | T | |
| 10 ⁹ | giga | G | |
| 10 ⁶ | mega | M | |
| 10 ³ | kilo | k | |
| 10 ² | hecto | h ^a | |
| 10 | deka | da ^a | |
| 10 ⁻¹ | deci | d ^a | |
| 10 ⁻² | centi | c ^a | |
| 10 ⁻³ | milli | m | |
| 10 ⁻⁶ | micro | μ | |
| 10 ⁻⁹ | nano | n | |
| 10 ⁻¹² | pico | p | |
| 10 ⁻¹⁵ | femto | f | |
| 10 ⁻¹⁸ | atto | a | |

For a complete description of SI and its use, the reader is referred to ASTM E 380 (4).

A representative list of conversion factors from non-SI to SI units is presented herewith. Factors are given to four significant figures. Exact relationships are followed by a dagger. A more complete list is given in ASTM E 380-84 (4) and ANSI Z 210.1-1976 (6).

Conversion Factors to SI Units

Abbreviations and Unit Symbols

Following is a list of commonly used abbreviations and unit symbols appropriate for use in the *Encyclopedia*. In general they agree with those listed in *American National Standard Abbreviations for Use on Drawings and in Text (ANSI Y1.1)* (6) and *American National Standard Letter Symbols for Units in Science and Technology (ANSI Y10)* (6). Also included is a list of acronyms for a number of private and government organizations as well as common industrial solvents, polymers, and other chemicals.

Rules for Writing Unit Symbols (4):

1. Unit symbols should be printed in upright letters (roman) regardless of the type style used in the surrounding text.
2. Unit symbols are unaltered in the plural.
3. Unit symbols are not followed by a period except when used as the end of a sentence.
4. Letter unit symbols are generally written in lowercase (eg, cd for candela) unless the unit name has been derived from a proper name, in which case the first letter of the symbol is capitalized (W, Pa). Prefix and unit symbols retain their prescribed form regardless of the surrounding typography.

⁺Exact.

5. In the complete expression for a quantity, a space should be left between the numerical value and the unit symbol. For example, write 2.37 lm, *not* 2.37lm, and 35 mm, *not* 35mm. When the quantity is used in an adjectival sense, a hyphen is often used, for example, 35-mm film. *Exception:* No space is left between the numerical value and the symbols for degree, minute, and second of plane angle, and degree Celsius.

6. No space is used between the prefix and unit symbols (eg, kg).

7. Symbols, not abbreviations, should be used for units. For example, use "A," not "amp," for ampere.

8. When multiplying unit symbols, use a raised dot:

N·m for newton meter

In the case of W·h, the dot may be omitted, thus:

Wh

An exception to this practice is made for computer printouts, automatic typewriter work, etc, where the raised dot is not possible, and a dot on the line may be used.

9. When dividing unit symbols use one of the following forms:

$$\text{m/s or m}\cdot\text{s}^{-1} \text{ or } \frac{\text{m}}{\text{s}}$$

In no case should more than one slash be used in the same expression unless parentheses are inserted to avoid ambiguity. For example, write:

$$\text{J}/(\text{mol}\cdot\text{K}) \text{ or } \text{J}\cdot\text{mol}^{-1}\cdot\text{K}^{-1} \text{ or } (\text{J}/\text{mol})/\text{K}$$

but *not*

$$\text{J/mol/K}$$

10. Do not mix symbols and unit names in the same expression. Write:

$$\text{joules per kilogram or J/kg or J}\cdot\text{kg}^{-1}$$

but *not*

$$\text{joules/kilogram nor joules/kg nor joules}\cdot\text{kg}^{-1}$$

Abbreviations and Units

| at no. | atomic number | cmpd | compound |
| at wt | atomic weight | CNRS | Centre National de la Recherche Scientifique |
| av(g) | average | CNS | central nervous system |
| AWS | American Welding Society | -co- | copolymerized with |
| ^b | bonding orbital | CoA | coenzyme A |
| bbl | barrel | COC | Cleveland open cup |
| bcc | body-centered cubic | COD | chemical oxygen demand |
| bct | body-centered tetragonal | coml | commercial(ly) |
| Bé | Baumé | conc | concentration |
| BET | Brunauer-Emmett-Teller (adsorption equation) | cp | chemically pure |
| | | cph | close-packed hexagonal |
| | | CPSC | Consumer Product Safety Commission |
| | | cryst | crystalline |

| | | | |
|----------------|--|--------------|--|
| cub | cubic | eng | engineering |
| D | Debye | EPA | Environmental Protection Agency |
| D- | denoting configurational relationship | epr | electron paramagnetic resonance |
| d | differential operator | ϵ | dielectric constant (unitless) |
| d- | <i>dextro</i> -, dextrorotatory | eq. | equation |
| da | deka (prefix for 10^1) | esca | electron-spectroscopy for chemical analysis |
| dB | decibel | esp | especially |
| dc | direct current, <i>n.</i> | esr | electron-spin resonance |
| d-c | direct current, <i>adj.</i> | est(d) | estimate(d) |
| dec | decompose | estn | estimation |
| detd | determined | esu | electrostatic unit |
| detn | determination | η | viscosity |
| dia | diameter | $[\eta]$ | intrinsic viscosity |
| dil | dilute | η_{inh} | inherent viscosity |
| dl-; DL- | racemic | η_r | relative viscosity |
| DMA | dimethylacetamide | η_{red} | reduced viscosity |
| DMF | dimethylformamide | η_{sp} | specific viscosity |
| DMG | dimethyl glyoxime | exp | experiment, experimental |
| DMSO | dimethyl sulfoxide | ext(d) | extract(ed) |
| DOD | Department of Defense | F | farad (capacitance) |
| DOE | Department of Energy | F | faraday (96,487 C); free energy |
| DOT | Department of Transportation | f | femto (prefix for 10^{-15}) |
| DP | degree of polymerization | FAO | Food and Agriculture Organization (United Nations) |
| dp | dew point | fcc | face-centered cubic |
| DPH | diamond pyramid hardness | FDA | Food and Drug Administration |
| DS | degree of substitution | FEA | Federal Energy Administration |
| dsc | differential scanning calorimetry | FHSA | Federal Hazardous Substances Act |
| dstl(d) | distill(ed) | fob | free on board |
| dta | differential thermal analysis | fp | freezing point |
| E | Young's modulus | FPC | Federal Power Commission |
| (E) | entgegen; opposed | FRB | Federal Reserve Board |
| e | polarity factor in Alfrey-Price equation | frz | freezing |
| e ⁻ | electron | G | giga (prefix for 10^9) |
| ECU | electrochemical unit | G | gravitational constant = $6.67 \times 10^{-11} \text{ N} \cdot \text{m}^2/\text{kg}^2$; |
| ed. | edited, edition, editor | | Gibb's free energy |
| ED | effective dose | g | gram |
| EDTA | ethylenediaminetetraacetic acid | (g) | gas, only as in H ₂ O(g) |
| em | electron microscopy | | |
| emf | electromotive force | | |
| emu | electromagnetic unit | | |
| en | ethylene diamine | | |

| | | | |
|--------------------------------|---|------------------|--|
| <i>g</i> | gravitational acceleration | <i>ir</i> | infrared |
| <i>-g-</i> | graft as in graft copolymer | IRLG | Interagency Regulatory Liaison Group |
| <i>gc</i> | gas chromatography | ISO | International Organization for Standardization |
| <i>gem-</i> | geminal | IU | International Unit |
| <i>glc</i> | gas-liquid chromatography | IUPAC | International Union of Pure and Applied Chemistry |
| <i>g-mol</i> | gram-molecular weight | IV | iodine value |
| <i>wt.</i> | | <i>iv</i> | intravenous |
| <i>gmw</i> | | <i>J</i> | joule |
| GNP | gross national product | <i>K</i> | kelvin |
| <i>gpc</i> | gel-permeation chromatography | <i>K</i> | equilibrium constant |
| GRAS | Generally Recognized as Safe | <i>k</i> | kilo (prefix for 10 ³) |
| <i>grd</i> | ground | <i>k</i> | reaction rate constant |
| <i>Gy</i> | gray | <i>kg</i> | kilogram |
| <i>H</i> | henry | <i>L</i> | denoting configurational relationship |
| <i>H</i> | enthalpy | <i>L</i> | liter (for fluids only) (5) |
| <i>h</i> | hour; hecto (prefix for 10 ²) | <i>l-</i> | levo-, levorotatory |
| <i>ha</i> | hectare | (<i>l</i>) | liquid, only as in NH ₃ (<i>l</i>) |
| HB | Brinell hardness number | LC ₅₀ | conc lethal to 50% of the animals tested |
| Hb | hemoglobin | LCAO | linear combination of atomic orbitals |
| <i>hcp</i> | hexagonal close-packed | LCD | liquid crystal display |
| <i>hex</i> | hexagonal | <i>lcl</i> | less than carload lots |
| HK | Knoop hardness number | LD ₅₀ | dose lethal to 50% of the animals tested |
| <i>hplc</i> | high-pressure liquid chromatography | LED | light-emitting diode |
| HRC | Rockwell hardness (C scale) | <i>liq</i> | liquid |
| HV | Vickers hardness number | <i>lm</i> | lumen |
| <i>hyc</i> | hydrated, hydrous | <i>ln</i> | logarithm (natural) |
| <i>hyg</i> | hygroscopic | LNG | liquefied natural gas |
| <i>Hz</i> | hertz | <i>log</i> | logarithm (common) |
| (<i>eg, Pr</i> ¹) | iso (<i>eg, isopropyl</i>) | LPG | liquefied petroleum gas |
| <i>i-</i> | inactive (<i>eg, i-methionine</i>) | <i>ltl</i> | less than truckload lots |
| IACS | International Annealed Copper Standard | <i>lx</i> | lux |
| <i>ibp</i> | initial boiling point | <i>M</i> | mega (prefix for 10 ⁶); metal (as in MA) |
| IC | inhibitory concentration | <i>M</i> | molar; actual mass |
| ICC | Interstate Commerce Commission | \bar{M}_w | weight-average mol wt |
| ICT | International Critical Table | \bar{M}_n | number-average mol wt |
| ID | inside diameter; infective dose | \bar{M}_v | viscosity-average mol wt |
| <i>ip</i> | intraperitoneal | <i>m</i> | meter; milli (prefix for 10 ⁻³) |
| IPS | iron pipe size | <i>m</i> | molal |
| IPTS | International Practical Temperature Scale (NBS) | | |
