"A MARVELOUS BOOK . . . Citified as I am, to the point of catatonia, I was enchanted."

**—John Leonard,
The New York Times
Book Review**

"There is not a faster growing reputation among current American writers than that of John McPhee . . . He has a boundlessly diversified range of curiosity, a gift for portraiture which enables him to capture real people as memorably as any novelist does his imaginary ones, honesty and accuracy beyond what is common in journalism, and a Balzacian zest for the details of what things are and how they work."

**—Edmund Fuller,
Wall Street Journal**

"Fresh, spirited, exciting."

—Vogue

"What is really in view in *Coming into the Country* is a matter not usually met in works of reportage . . . nothing less than the nature of the human condition."

**—Benjamin DeMott,
Atlantic**

“JUSTLY CELEBRATED . . . By showing us what Alaska is like, McPhee reminds us what we have become.”

—Washington Post Book World

“The perfect Christmas gift for an armchair traveler. McPhee is incapable of writing a dull sentence.”

**—Susan Brownmiller,
Chicago Tribune**

“Richly textured . . . Careful and tender portraits drawn solely with words.”

—Los Angeles Times

“An album . . . for the hut-dreamer, for the city dweller . . . If you loved *Swiss Family Robinson*, you’ll love John McPhee.”

**—Diane Johnson,
The New York Review of Books**

“With this book McPhee proves to be the most versatile journalist in America.”

**—Editor’s Choice,
The New York Times**

BOOK I

AT THE NORTHERN TREE LINE

THE
ENCIRCLED
RIVER

My bandanna is rolled on the diagonal and retains water fairly well. I keep it knotted around my head, and now and again dip it into the river. The water is forty-six degrees. Against the temples, it is refrigerant and relieving. This has done away with the headaches that the sun caused in days before. The Arctic sun—penetrating, intense—seems not so much to shine as to strike. Even the trickles of water that run down my T-shirt feel good. Meanwhile, the river—the clearest, purest water I have ever seen flowing over rocks—breaks the light into flashes and sends them upward into the eyes. The headaches have reminded me of the kind that are sometimes caused by altitude, but, for all the fact that we have come down through mountains, we have not been higher than a few hundred feet above the level of the sea. Drifting now—a canoe, two kayaks—and thanking God it is not my turn in either of the kayaks, I lift my fish rod from the tines of a caribou rack (lashed there in mid-canoe to the duffel) and send a line flying toward a wall of bedrock by the edge of the stream. A grayling comes up and, after some hesitation, takes the lure and runs with it for a time. I disengage the lure and let the grayling go, being mindful not to wipe my hands on my shirt. Several days in use, the shirt is approaching filthy, but here among grizzly bears I would prefer to stink of humanity than of fish.

Paddling again, we move down long pools separated by short white pitches, looking to see whatever might appear in the low hills, in the cottonwood, in the white and black spruce—and in the river, too. Its bed

is as distinct as if the water were not there. Everywhere, in fleets, are the oval shapes of salmon. They have moved the gravel and made redds, spawning craters, feet in diameter. They ignore the boats, but at times, and without apparent reason, they turn and shoot downriver, as if they have felt panic and have lost their resolve to get on with their loving and their dying. Some, already dead, lie whitening, grotesque, on the bottom, their bodies disassembling in the current. In a short time, not much will be left but the hooking jaws. Through the surface, meanwhile, the living salmon broach, freshen—make long, dolphinesque flights through the air—then fall to slap the water, to resume formation in the river, noses north, into the current. Looking over the side of the canoe is like staring down into a sky full of zeppelins.

A cloud, all black and silver, crosses the sun. I put on a wool shirt. In Alaska, where waters flow in many places without the questionable benefit of names, there are nineteen streams called Salmon—thirteen Salmon Creeks, six Salmon Rivers—of which this one, the Salmon River of the Brooks Range, is the most northern, its watershed wholly above the Arctic Circle. Rising in treeless alpine tundra, it falls south into the fringes of the boreal forest, the taiga, the upper limit of the Great North Woods. Tree lines tend to be digital here, fingering into protected valleys. Plants and animals are living on margin, in cycles that are always vulnerable to change. It is five o'clock in the afternoon. The cloud, moving on, reveals the sun again, and I take off the wool shirt. The sun has been up fourteen hours, and has hours to go before it sets. It seems to be rolling slowly down a slightly inclined plane. A tributary, the Kitlik, comes in from the northwest. It has formed with the Salmon River a raised, flat sand-and-gravel mesopotamia—a good enough campsite, and, as a glance can tell, a fishing site to exaggerate the requirements of dinner.

There are five of us, four of whom are a state-federal study team. The subject of the study is the river. We pitch the tents side by side, two Alpine Draw-Tite tents, and gather and saw firewood: balsam poplar

(more often called cottonwood); sticks of willow and alder; a whole young spruce, tip to root, dry now, torn free upriver by the ice of the breakup in spring. Tracks are numerous, coming, going, multidirectional, tracks wherever there is sand, and in gravel if it is fine enough to have taken an impression. Wolf tracks. The pointed pods of moose tracks. Tracks of the barren-ground grizzly. Some of the moose tracks are punctuated with dewclaws. The grizzlies' big toes are on the outside.

The Kitlik, narrow, and clear as the Salmon, rushes in white to the larger river, and at the confluence is a pool that could be measured in fathoms. Two, anyway. With that depth, the water is apple green, and no less transparent. Salmon and grayling, distinct and dark, move into, out of, around the pool. Many grayling rest at the bottom. There is a pair of intimate salmon, the male circling her, circling, an endless attention of rings. Leaning over, watching, we nearly fall in. The gravel is loose at the river's edge. In it is a large and recently gouged excavation, a fresh pit, close by the water. It was apparently made in a thrashing hurry. I imagine that a bear was watching the fish and got stirred up by the thought of grabbing one, but the water was too deep. Excited, lunging, the bear fell into the pool, and it flailed back at the soft gravel, gouging the pit while trying to get enough of a purchase to haul itself out. Who can say? Whatever the story may be, the pit is the sign that is trying to tell it.

It is our turn now to fish in the deep pool. We are having grayling for dinner—Arctic grayling of firm delicious flesh. On their skins are black flecks against a field of silvery iridescence. Their dorsal fins fan up to such height that grayling are scale-model sailfish. In the cycles of the years, and the millennia, not many people have fished this river. Forest Eskimos have long seined at its mouth, but only to the third bend upstream. Eskimo hunters and woodcutters, traversing the Salmon valley, feed themselves, in part, with grayling. In all, perhaps a dozen outsiders, so far as is known, have travelled, as we have, in boats down the length of the river. Hence the grayling here have hardly been, in the vernacular of angling, fished out. Over the centuries,

they have scarcely been fished. The fire is high now and is rapidly making coals. Nineteen inches is about as long as a grayling will grow in north Alaska, so we agree to return to the river anything much smaller than that. As we do routinely, we take a count of the number needed—see who will share and who can manage on his own the two or three pounds of an entire fish. Dinner from our supplies will come in hot plastic water bags and be some form of desiccated mail-order stew—Mountain House Freeze Dried Caribou Cud—followed by Mountain House Freeze Dried fruit. Everyone wants a whole fish.

Five, then. Three of us pick up rods and address the river—Bob Fedeler, Stell Newman, and I. Pat Pourchot, of the federal Bureau of Outdoor Recreation, has not yet cast a line during the trip. As he puts it, he is phasing himself out of fishing. In his work, he makes many river trips. There will always be people along who want to fish, he reasons, and by removing himself he reduces the number. He has wearied of take-and-put fishing, of molesting the fish, of shocking the ones that, for one reason or another, go back. He says he wonders what kind of day a fish will have after spending some time on a hook. John Kauffmann has largely ignored the fishing, too. A National Park Service planner who has been working for five years in Arctic Alaska, he is a New England mastertouch dry-fly fisherman, and up here his bamboo ballet is regarded as effete. Others taunt him. He will not rise. But neither will the grayling to his Black Gnats, his Dark Cahills, his Quill Gordons. So—tall, angular—he sits and observes, and his short gray beard conceals his disgust. He does agree to time the event. He looks at his watch. Invisible lines, glittering lures go spinning to the river, sink in the pool. The rods bend. Grayling do not sulk, like the salmon. They hit and go. In nine minutes, we have our five. They are seventeen, eighteen inches long. We clean them in the Kitlik, with care that all the waste is taken by the stream. We have a grill with us, and our method with grayling is simply to set them, unscaled, fins intact, over the fire and broil them like steaks. In minutes, they are ready, and beneath their skins is a brown-streaked

white flesh that is in no way inferior to the meat of trout. The sail, the dorsal fin, is an age-old remedy for toothache. Chew the fin and the pain subsides. No one has a toothache. The fins go into the fire.

When a lure falls into the water, it can become arrested at the bottom, and you tug and haul at the line and walk in an arc, whipping the rod, four-lettering the apparent snag that has spoiled the cast and is stealing your equipment. Tug some more. Possibly a small boulder or a sunken log has stopped the lure. Possibly not, too. You may have a pensive salmon. He contemplates. He is not yet ready to present his response. Not long before this river trip, I was fishing in lake-and-stream country northwest of Anchorage and the line became snagged in a way that to me suggested big things below. When I tugged, there was a slight movement at the other end, a gesture in my direction, the signal—obviously—of an irritated salmon getting ready to explode. I strained the line. It moved a bit more in my direction. A couple of minutes later, I landed a Safeway Stores Cragmont orange-soda can, full of silt and sand.

Over the fire now, I tell that story, and Bob Fedeler responds that that country near Anchorage, where many people have summer cottages, has long since been virtually fished out and is now supplied with stocked rainbows from a state hatchery. "That is the myth of Alaska," he says. "The myth is that in Alaska there's a fish on every cast, a moose behind every tree. But the fish and the moose aren't there. People go out with high expectations, and they're disappointed. To get to the headwaters of a river like this one takes a lot of money. The state needs to look to the budgets and desires of people who cannot afford to come to a place like this."

John Kauffmann, sitting on the ground and leaning against his duffel, shifts his weight uncomfortably. "You can charter a lot of aircraft time for the cost of summer cabins and Winnebagos," he says, and he bangs his pipe on a rock.

Fedeler shrugs. He scratches his cheek, which is under a mat of russet beard. He is compact, sturdy, not

particularly tall, with a wide forehead and intelligent brown eyes. He would resemble Sigmund Freud, if Sigmund Freud had been a prospector. Fedeler says that he and his wife, Lyn, almost left Alaska during their first year, because they saw so little, and could afford so little, of the outdoors, of the wild—let alone of wildlife. In 1972, he took an advanced degree from South Dakota State and straightaway headed for Alaska. To support themselves, he and Lyn found jobs in Anchorage. He worked at McMahan's Furniture. He is a wildlife biologist. The state work he sought was given preferentially to people who had been resident in Alaska for at least a year. Meanwhile, in Anchorage—a city sealed away by water and mountains, a city that would be right at home at the west end of the George Washington Bridge—he had to go to the movies to see anything wild. He did not have the hundred dollars an hour needed for air charter. He did not have a hundred dollars. He knew the wilderness was out there—several hundred million acres of it—but he lacked the means to get to it, and his soul began to stale. Fortunately, he stuck out the wait, went on shoving McMahan's furniture around. At last, he got the work he wanted, his present job as a wildlife biologist with the Alaska Department of Fish and Game, based in Fairbanks.

Pat Pourchot, of Anchorage, puts in that he finds plenty to do near home. He climbs cliffs. He kayaks on fast white rivers.

Stories emerge about others like Fedeler—for example, a young man I know from Arkansas, who came to Alaska a year and a half ago specifically to fish and hunt. Where he could afford to go he found no fish and nothing much to hunt. He drove a cab in Anchorage until he couldn't stand it anymore. Taking a two-month vacation, he went home to Mountain Home. Then he came back to Alaska and his taxi. "It was the prettiest spring I've ever seen," he reported. "The dogwoods and redbuds blossomed and they just stayed and stayed. I got all the fishing I wanted, in Arkansas. You need the bucks for the good hunting and fishing up here. Fishing is supposed to be, you know, so out of sight
