Introduction

Just looking at words on a page isn't reading. You can pretend to be reading and look at many words in a short length of time. However, if you don't understand what you have just read, then you have wasted your time. To read what is on a page, you must understand what the words, as a whole, say to the reader. You can't memorize just a key phrase or sentence and say, "This is what it's all about." Instead, you must be able to put into your own words the ideas and information that you find. When you can do that, you truly understand what you have read!

To read, you must have a purpose. If you don't have one, then the job of reading becomes much more difficult. Reading is not an easy task even when you do know the purpose. Reading takes much concentration. It also takes energy because, when reading a long passage, you must persist and continue reading until the end of the selection. Also, you must remember what was said in the earlier part of that passage while you're reading the latter part. Any time you must concentrate and remember something, it helps to have a good reason for doing so.

There are two kinds of reasons or purposes for reading something. One purpose for reading is because you decide you want to read. When you pick up the comic section of the daily newspaper, you do so because you want to have fun in reading. You want to enjoy the humor, adventure, and entertainment found there. The sports or fashion pages may give other kinds of pleasure, as may columns like "Ann Landers" or "Dear Abby." The other reason or purpose for reading is because you need to read something. For example, you might need to find specific information in the classified ad section of the newspaper, or maybe you have to read a set of directions so that you can install a stereo set.

In a way, school assignments represent the second reason for reading. Your assignments are given to you by someone else. For instance, a teacher may say, "Read this. There will be a test on this material next Friday." When that type of reading is assigned, you seldom think of it as fun. It is a task that you are required to do.

Reading specific assignments in school, as well as reading materials outside of school, helps you develop an understanding of the world in which you live. While in school, you will read much material that you have not personally chosen to read, and this type of reading assignment will require much effort on your part. However, remember that, through this reading, you can learn more about life and your world. For the rest of your life, you can consider reading as one of the best ways to learn different types of information you must know in order to lead a better life.

In this book, you will be given practice in establishing your reasons or *purposes* for reading a specific passage. Therefore, your reading will have a definite direction, and you will be able to get the most out of what you are reading.

In completing the activities and assignments given in this book, please follow these steps

- 1. Carefully read the purposes or reasons given for each reading selection.
- 2. Read the selection or passage, keeping in mind the first step. (As you read through this book, the assigned passages will become longer and the tasks more complicated.)
- 3. Check back to discover whether you have remembered all the information requested of you.

The purpose of this book is to provide you with practice in reading for understanding. By the time you complete the activities in this book, you should be a better reader than you were when you first opened this book's pages.

Finding Facts and Details

Finding Details in Special Formats Finding Facts and Details in Regular Formats Finding Several Details Finding Certain Details There are many different kinds of information included in the passages that have been selected for this book. Some of the different types of information are facts, details, items, events, elements, incidents, steps, units, places, and names. In Reading by Doing, the word "details" is used to represent most of the "things" or types of information you will be asked to find in the passages you read. Identifying these details is a purpose for reading that can be very important, particularly when reading your assignments.

Finding Details in Special Formats

Occasionally, details do not appear in sentences or paragraphs but in formats such as maps, charts, graphs, diagrams, tables, cartoons, and the like. Some practice in finding details in these formats will help prepare you for finding them in regular writing stvle.

HERE'S HOW TO DO IT

Whenever you read a passage, follow these steps:

- 1. Look over the passage. Notice what kind of a special format or appearance it has.
- 2. Observe the special way the information is organized.
- 3. Read only the information you need.
- 4. Check yourself when you finish finding the details. Close the book. Repeat the details quietly to yourself or write them down to make certain that you understand and remember them.
- 5. Wait for about ten or fifteen minutes; then try to recall the details you read in the passage.

Sample Assignment

Look at the selection below. Notice it is a table that gives the presidential returns from the 1976 election in the United States. Observe the special way in which the information is organized. Note that the states are listed alphabetically down the side of the table (or vertically) and the headings of information go across the top of the table (or horizontally).

As you study this table, keep these details in mind.

- 1. How many votes did Carter receive in North Carolina?
- 2. What percentage of the vote did Ford receive in Iowa?

- 3. Which candidate won Michigan?
- 4. How many electoral votes did he receive by winning this state?

As you read, remember to follow the five previously-mentioned steps in the "Here's How to Do It" section.

STATE BY STATE

By The Associated Press

Percent of		Electoral	Ford	Carter

100	Wyoming	F-3	93,359-60	62,591–40
	Total	538	37,768,567–48	39,621,145–51

Now, try to answer the questions you read before you studied this table. Then check your replies with answers given below.

1. Number of	f votes Cart	er received in	North Carolina	
2. Percent of	the vote Fo	rd received in	Iowa	
3. Candidate	who won N	/lichigan		
4. Number of	f electoral v	otes this cand	idate received _	
Answers				
1. 923.854	2 50	3 Ford	4 21	

Did you notice that, as you found your answers, you skipped many details? Looking only for what you are asked to find saves you time when you are reading. This process of looking for specific details is called *scanning*.

Now try to find only the information that will help you with these details. Then answer the questions.

1. Who won Colorado?
2. What percent of the Texas vote is found in the table?
3. What percent did Carter receive in Maryland?
4. How many votes did Ford receive in New Hampshire?
5. How close was the vote in Wisconsin?
6 How many electoral votes did Carter win in Missouri?
