Author's preface

The *Longman Anagram Dictionary* has been designed to solve any anagram within seconds, so it should prove indispensable to crossword solvers and word-game enthusiasts alike.

Over 100,000 words have been taken from the Longman Word Bank. To these has been added a unique list of some 70,000 phrases, in as many variations as possible, both common and obscure, which may appear in cryptic crosswords.

It is very easy to use. Take the letters suspected of forming an anagram, and arrange them in alphabetical order. Then look up the resulting jumble in the appropriate length section of the dictionary. The solution will appear on the right.

For example, suppose the clue reads 'Reached an arrangement for Ted and Anita' (8). This suggests the solution is an anagram of the letters T,E,D,A,N,I,T,A. Arrange these letters alphabetically; this gives AADEINTT, which we find in the eight-letter section as ATTAINED.

The method is the same where the answer is a phrase. Suppose the clue reads 'Rome's roles varied approximately' (4,2,4). So we need an anagram of the letters R,O,M,E,S,R,O,L,E,S. This gives EELMOORRSS, which we find in the ten-letter section as MORE OR LESS.

In some cases, more than one solution will be given for a certain combination of letters. Where this occurs, choose whichever solution fits in with the rest of the clue, or with the letters already written in the crossword frame.

The *Longman Anagram Dictionary* can also help with word games, puzzles and competitions – it will prove a trusty friend in every puzzler's home.

Rik Edwards

About the author

Rik Edwards was born in 1956 and was educated in Watford and at the University of Warwick. In addition to compiling books for the word-game enthusiast, his interests include popular music and misprinted bank notes.

How to spot anagrams

Crossword compilers have many ways of indicating the use of an anagram, and the solver may find the following summary useful.

Usually, the anagram clue is in three parts: the letters making up the anagram; some indication that the letters must be rearranged (ie an 'anagram signal'); and some indication of the meaning of the solution.

Thus in 'Horsemen find unusually rare firs', 'rare firs' provides the letters in the anagram, 'unusually' is the anagram signal, and 'Horsemen' refers loosely to the meaning of the solution – 'Farriers'. In this case 'find' is a link – we can 'find' farriers by rearranging 'rare firs'.

There is virtually no limit to the ingenuity of the compilers in finding anagram signals, and they will usually find one which fits in well with the rest of the clue. No list of anagram signals can claim to be complete, but the following is probably as comprehensive as any published, and the user should get a full idea of the kind of signal he can expect.
