Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Equations of State and PVT Analysis

Applications for Improved Reservoir Modeling

This book is dedicated to my wife Wendy

About the Author

Tarek Ahmed, PhD, PE, served as a professor of petroleum engineering at Montana Tech of the University of Montana from 1980 to 2002. He has worked for Anadarko Petroleum, Baker Hughes, and Talisman Energy. In 2012, Dr. Ahmed founded the consulting company Tarek Ahmed & Associates, Ltd. Dr. Ahmed has authored or coauthored several textbooks, including *Reservoir Engineering Handbook* and *Hydrocarbon Phase Behavior*, among others.

Preface

The primary focus of this book is to present the basic fundamentals of equations of state and PVT laboratory analysis, and their practical applications in solving reservoir engineering problems. The book is arranged so it can be used as a textbook for senior and graduate students, or as a reference book for practicing petroleum engineers.

Chapter 1 reviews the principles of hydrocarbon phase behavior and illustrates the use of phase diagrams in characterizing reservoirs and hydrocarbon systems. Chapter 2 presents numerous mathematical expressions and graphical relationships that are suitable for characterizing the undefined hydrocarbon-plus fractions. Chapter 3 provides a comprehensive and updated review of natural gas properties and the associated, well-established correlations that can be used to describe the volumetric behavior of gas reservoirs. Chapter 4 discusses the PVT properties of crude oil systems and illustrates the use of laboratory data to generate the properties of crude oil that can be used to perform reservoir engineering studies. Chapter 5 reviews developments and advances in the field of empirical cubic equations of state, and demonstrates their practical applications in solving phase equilibria problems.

Acknowledgments

It is my hope that the information presented in this textbook will improve the understanding of the subject of equations of state and phase behavior. Much of the material on which this book is based was drawn from the publications of the Society of Petroleum Engineers, the American Petroleum Institute, and the Gas Processors Suppliers Associations. Tribute is paid to the educators and authors who have made numerous and significant contributions to the field of phase equilibria. I would like to especially acknowledge the significant contributions that have been made to the field of phase behavior and equations of state to Donald Katz, M. B. Standing, Curtis Whitson, and Bill McCain.

Special thanks to the editorial and production staff of Elsevier, in particular, Anusha Sambamoorthy, Kattie Washington, and Katie Hammon.

I hope my children Carsen and Asia will follow my footsteps and study petroleum engineering.

Contents

About the Author	xiii
Preface	xv
Acknowledgments	xvii

CHAPTER 1 Fundamentals of Hydrocarbon Phase Behavior..... 1

Single-Component Systems.....	1
Review of Pure Component Volumetric Properties	11
Pure Component Saturated Liquid Density	19
Two-Component Systems.....	22
Pressure-Composition Diagram “ <i>p-x</i> ” for Binary Systems	25
Three-Component Systems.....	30
Multicomponent Systems	32
Pressure-Temperature Diagram.....	32
Classification of Reservoirs and Reservoir Fluids.....	34
Classification of Oil Reservoirs	34
Classification of Crude Oil Systems	35
Gas Reservoirs	43
Gas-Oil Contact	59
Undersaturated GOC	65
Phase Rule	65
Problems	67
References.....	69

CHAPTER 2 Characterizing Hydrocarbon-Plus Fractions..... 71

Crude Oil Assay	71
Well-Defined Components	73
Undefined Components	77
Group 1. TBP.....	77
Group 2. Stimulated Distillation by GC	87
Group 3. The Plus Fraction Characterization Methods	93
Generalized Correlations	94
PNA Determination	122
Graphical Correlations.....	133
Splitting and Lumping Schemes	140
Splitting Schemes	141
Lumping Schemes	165
Characterization of Multiple Hydrocarbon Samples	181
Problems	184
References.....	186

CHAPTER 3 Natural Gas Properties	189
Behavior of Ideal Gases	190
Apparent Molecular Weight, M_a	191
Standard Volume, V_{sc}	193
Gas Density, ρ_g	193
Specific Volume, v	193
Specific Gravity, γ_g	194
Behavior of Real Gases	196
Effect of Nonhydrocarbon Components on the Z-Factor	202
Nonhydrocarbon Adjustment Methods	203
Wichert-Aziz's Correction Method.....	203
Carr-Kobayashi-Burrows's Correction Method.....	205
Correction for High-Molecular Weight Gases.....	207
Direct Calculation of Compressibility Factors	212
Hall-Yarborough's Method	212
Dranchuk and Abu-Kassem's Method	214
Dranchuk-Purvis-Robinson Method.....	216
Compressibility of Natural Gases	216
Gas Formation Volume Factor.....	221
Gas Expansion Factor.....	222
Gas Viscosity	223
Carr-Kobayashi-Burrows's Method	224
Lee-Gonzalez-Eakin's Method.....	228
Specific Gravity Wet Gases	230
Problems	235
References.....	237
CHAPTER 4 PVT Properties of Crude Oils.....	239
Crude Oil API Gravity	239
Specific Gravity of the Solution Gas " γ_g "	241
Crude Oil Density " ρ_o "	242
Density Correlations Based on the Oil Composition	243
Density Correlations Based on Limited PVT Data	254
Gas Solubility " R_s "	260
Standing's Correlation.....	261
Vasquez-Beggs's Correlation.....	263
Glaso's Correlation.....	264
Marhoun's Correlation	265
Petrosky-Farshad's Correlation	266
Bubble Point Pressure " p_b "	268

Standing's Correlation	269
Vasquez-Beggs's Correlation	271
Glaso's Correlation.....	272
Marhoun's Correlation	273
Petrosky-Farshad's Correlation	274
Oil FVF	275
Standing's Correlation	277
Vasquez-Beggs's Correlation	277
Glaso's Correlation.....	278
Marhoun's Correlation	279
Petrosky-Farshad's Correlation	279
Material Balance Equation	280
Isothermal Compressibility Coefficient of Crude Oil " c_o "	282
Undersaturated Isothermal Compressibility Coefficient.....	283
Saturated Isothermal Compressibility Coefficient.....	291
Undersaturated Oil Properties	294
Undersaturated Oil FVF	295
Undersaturated Oil Density	296
Total FVF " B_t "	298
Standing's Correlation	300
Glaso's Correlation.....	301
Marhoun's Correlation	302
Crude Oil Viscosity " μ_o "	304
Viscosity Correlations as Correlated with PVT Data	306
Viscosity Correlations From Oil Composition	311
Surface/Interfacial Tension " σ ".....	315
PVT Correlations for GOM Oil	318
Properties of Reservoir Water	323
Water FVF	323
Water Viscosity	324
Gas Solubility in Water	326
Water Isothermal Compressibility	326
Laboratory Analysis of Reservoir Fluids	327
Well Conditioning and Fluid Sampling	327
Surface Samples Recombination Procedure When $p < p_b$	338
Representative and Unrepresentative Samples	339
PVT Measurements	342
Routine Laboratory PVT Tests	345
Laboratory Analysis of Gas-Condensate Systems.....	403
Discussion of Retrograde Gas Laboratory Data	416

Condensate GOR and Condensate Yield	424
The Modified MBE for Retrograde Gas Reservoirs.....	426
Consistency Tests on the CCE and CVD Data.....	428
Liquid Blockage in Gas-Condensate Reservoirs	431
Behavior of Gas-Condensate Wells	432
Behavior of Retrograde Gas Reservoirs.....	434
Special Laboratory PVT Tests	437
Problems	457
References.....	463
CHAPTER 5 Equations of State and Phase Equilibria.....	467
Equilibrium Ratios.....	467
Flash Calculations.....	471
Binary System.....	475
Equilibrium Ratios for Real Solutions.....	476
Wilson's Correlation.....	476
Standing's Correlation.....	477
The Convergence Pressure Method	483
Equilibrium Ratios for the Plus Fractions	485
Campbell's Method	486
Winn's Method	486
Katz's Method	487
K-values for Nonhydrocarbon Components.....	487
Vapor-Liquid Equilibrium Calculations.....	488
Dew Point Pressure.....	488
Bubble Point Pressure.....	491
Separator Calculations.....	493
Equations of State.....	505
The Van der Waals Equation of State "VdW EOS"	506
Redlich-Kwong's Equation of State "RK EOS".....	512
Soave-Redlich-Kwong Equation of State "SRK EOS"	517
The Mixture Mixing Rule	521
Modifications of the SRK EOS.....	530
Volume Translation (Volume Shift) Parameter.....	531
The Peng-Robinson Equation of State.....	534
Summary of Equations of State	546
Equation-of-State Applications	546
Equilibrium Ratio	546
Dew Point Pressure.....	548
Bubble Point Pressure.....	550
Three-Phase Equilibrium Calculations.....	551
Vapor Pressure.....	557
