

Immunopathology

IIIRD INTERNATIONAL SYMPOSIUM

Held at Scripps Clinic and Research Foundation
La Jolla, California, USA
January 1963

Edited by
Pierre Grabar, Paris
Peter A. Miescher, New York

SCHWABE & CO . PUBLISHERS . BASEL/STUTTGART

This symposium was made possible through grants received from
the National Foundation and the Atomic Energy Commission (USA)

CONTENTS

I. Structure and Genetics of Immune-Globulins

<i>Morten Harboe and C. Kirk Osterland: Genetically Determined Structures of Immune-Globulins</i>	13
<i>E. C. Franklin, H. Fudenberg, L. Mårtensson, M. Meltzer and D. R. Stanworth: The γ-Globulin Groups in Man - Their Structural Basis and Biologic Significance</i> ...	25
<i>P. Burtin: Immunochemical Studies on Antigenic Structure of Human γ- and β_2-Globulins</i>	38
<i>John L. Fahey: Two Types of Molecules (I and II) present in the four Major γ-Globulin Groups</i>	50
<i>Gerald M. Edelman: Unresolved Problems in the Analysis of the Structure of Antibodies</i>	57
Discussion on Structure and Genetics of Immune-Globulins	68

II. Antibody Formation

<i>M. Fishman and F. L. Adler: Antibody Formation in Vitro</i>	79
<i>J. L. Gowans and D. D. McGregor: The Origin of Antibody-Forming Cells</i>	89
<i>T. Makinodan and J. F. Albright: Cytokinetics of Antibody Response</i>	99
<i>G. J. V. Nossal and Judith Mitchell: The Nature of RNA Synthesis in Immune Induction</i>	113
<i>Jonathan W. Uhr and Martin S. Finkelstein: Antibody Formation to Bacteriophage ϕX 174</i>	127
Discussion on Antibody Formation	136

III. Influence of Various Factors on Antibody Response

<i>Milan Hašek: Critical Factors Governing the Response Pattern: Immunity versus Tolerance</i>	148
<i>Frank J. Dixon and Patricia J. McConahey: X-Ray Enhancement of Antibody Formation</i>	158
<i>William O. Weigle: Autoimmunity and Termination of Acquired Immunological Tolerance</i>	167
<i>Robert A. Good, Carlos Martinez, Agustin P. Dalmaso, Ben W. Papermaster and Ann E. Gabrielsen: Studies on the Role of the Thymus in Developmental Biology, with a Consideration of the Association of Thymus Abnormalities and Clinical Disease</i>	177
Discussion on Influence of Various Factors on Antibody Response	201

IV. Mechanisms of Immunogenic Kidney Diseases

<i>B. C. Seegal, K. C. Hsu and G.A. Andres: Specific Nephrotoxic Nephritis: Old Facts and Present Concepts</i>	208
<i>E. F. Pfeiffer: Demonstration of and Evidence for the Lymphocyte Bound Nature of a Secondary Nephritis Producing Factor in Nephrotoxic Glomerulonephritis in Rats</i>	220
<i>Walter Heymann, E. P. Kmetec, S. G. F. Wilson, J. L. P. Hunter, Donald B. Hackel and Francis Cuppige: Experimental Autoimmune Renal Disease in Rats</i>	240

<i>Raymond W. Steblay</i> : Glomerulonephritis Induced in Sheep and Monkeys by Injections of Heterologous Glomerular Basement Membrane and Freund's Adjuvant	252
<i>Joseph D. Feldman</i> : Pathogenesis of Ultrastructural Glomerular Changes induced by Immunologic Means	263
<i>Richard M. Krause</i> : Antigenic Components of Hemolytic Streptococci	282
Discussion on Mechanisms of Immunogenic Kidney Diseases	290

V. Mechanisms of Blood Cell Damage Produced by Immunological Reactions

<i>Burton Goldberg</i> : Mechanisms of Immune Injury in Mammalian Cell Systems	300
<i>P. A. Miescher, H. L. Spiegelberg and B. Benacerraf</i> : Mechanism of Elimination of Sensitized Rat Erythrocytes and E. Coli from the Circulation of Mice	311
<i>J. P. Leddy, R. W. Hill, S. N. Swisher and J. H. Vaughan</i> : Observations on the Immunochemical Nature of Red Cell Auto-sensitization	318
<i>H. J. Müller-Eberhard</i> : Identification of Complement Antigens Coating Red Cells in Acquired Hemolytic Anemia	332
<i>N. Raphael Shulman</i> : Mechanism of Blood Cell Damage by Adsorption of Antigen-Antibody Complexes	338
<i>James H. Jandl, Harry S. Jacob and Richard A. MacDonald</i> : Reticuloendothelial Proliferation Stimulated by Injured, Autologous Red Cells	353
Discussion on Mechanisms of Blood Cell Damage Produced by Immunological Reactions	369

P R E F A C E

Immunopathology, i.e. the study of immune phenomena in disease, has attracted growing interest. The number of investigators devoted to this field is increasing at a great rate, and correspondingly, the number of contributions has been multiplying in recent years. This development is also reflected in the symposia on immunopathology. The first symposium was devoted to a variety of problems involving immunologic mechanisms. Investigators with broad and diverse interests discussed their mutual problems and points of view. For the second symposium it was found more desirable to limit the discussion to the problem of mechanisms of tissue damage produced by immune reactions, a field of immunopathology which has received special attention from many investigators. Only 15 months later, the third symposium took place. The fact that it was possible and desirable to hold another meeting after such a short interval without undue repetition gives evidence for the rapidity of development of interest in immunopathology.

The topics of the Third Symposium on Immunopathology were selected in order to cover some of the most active new developments in immunopathology. Much progress has been achieved in the understanding of the structure of immune globulins; with the characterization of the various structural subunits of the immune globulins, exact genetic studies have become possible, opening a new field of genetics of immune globulins.

The second and third topics dealt with the problem of antibody formation and the factors that influence it. This problem not only has broad biologic interest but also may have direct clinical applications.

In the fourth session, mechanisms of immunogenic kidney disease were discussed. A number of differing experimental immune mechanisms are known to produce damage to the kidney. However, in immunopathology of the human kidney, much work has still to be done in order to understand the differing pathogenic pathways involved in the various kidney disorders.

The last chapter deals with mechanisms of hematologic damage produced by immunological reactions. Formed elements of the blood are easily available for investigation, and thus lend themselves for the study of the mechanisms of cell damage produced by immune reactions. Special attention was given to the action of antigen-antibody complexes.

The Third Symposium on Immunopathology was very generously sponsored by the National Foundation and the Atomic Energy Commission. We wish to gratefully acknowledge their financial support and their understanding cooperation.

As in the previous proceedings, the pertinent discussions have been edited by a number of participants. Repetitions were eliminated whenever possible, and the sequence of the discussion was arranged in order to facilitate their reading by non-participants. We are especially indebted to Drs. B. Benacerraf, Charles G.

Cochrane, E. Franklin, and H. Müller-Eberhard for their collaboration in editing the discussions. We are grateful to all participants for their contributions and help in the organization of the symposium and in the publication of the proceedings.

In the preparation of this symposium and in its actual organization, Dr. G. McMahon acted again as an efficient secretary general. We gratefully acknowledge his invaluable help.

Dr. h. c. Christian Overstolz and Dr. H. G. Oeri from Schwabe & Co. spared neither trouble nor expense in the publication of the present volume. We owe our thanks to them. The distribution of the book in the United States of America has kindly been undertaken by the publishers Grune & Stratton, Inc., New York and London.

Paris and New York, September 1963

Pierre Grabar Peter A. Miescher

WELCOME

There is no doubt that immunopathology, in an environment of proper and integrated disciplines, is one of the most, if not the most, productive health sciences in our era. At meetings such as these, with immunopathology as the fundamental and common interest for a selected few who do so much, there is no question as to accomplishment. Accordingly, our institution is proud to be a participant in the proceedings of the Third International Symposium on Immunopathology.

EDMUND L. KEENEY, M.D.

Medical Director

Scripps Clinic and Research Foundation

PARTICIPANTS

- K. Frank Austen*, M.D., Department of Microbiology, The Johns Hopkins University School of Medicine, Baltimore 5, Maryland
- Baruj Benacerraf*, M.D., Professor of Pathology, Department of Pathology, New York University School of Medicine, 550 First Avenue, New York 16, New York
- Samuel C. Bukantz*, M.D., Medical and Research Director, Children's Asthmatic Research Institute of Health, 3447 West 19th Avenue, Denver 4, Colorado
- Pierre Burtin*, M.D., Head of the Immunochemistry Laboratory, Institut de Recherches sur le Cancer, B. P. 8, Villejuif (Seine), France
- Dan H. Campbell*, M.D., Professor of Immunochemistry, California Institute of Technology, Pasadena, California
- Charles Christian*, The National Foundation, 800 Second Avenue, New York, New York
- Charles G. Cochrane*, M.D., Division of Experimental Pathology, Scripps Clinic and Research Foundation, La Jolla, California
- Frank J. Dixon*, M.D., Head, Division of Experimental Pathology, Scripps Clinic and Research Foundation, La Jolla, California
- Sheldon Dray*, M.D., Laboratory of Immunology, National Institute of Allergy and Infectious Diseases, National Institutes of Health, Bethesda 14, Maryland
- Gerald M. Edelman*, M.D., Ph.D., Assistant Professor and Assistant Dean, The Rockefeller Institute, New York 21, New York
- John L. Fahey*, M.D., National Cancer Institute, National Institutes of Health, Bethesda 14, Maryland
- Richard Farr*, M.D., Division of Allergy, Scripps Clinic and Research Foundation, La Jolla, California
- Joseph D. Feldman*, M.D., Division of Experimental Pathology, Scripps Clinic and Research Foundation, La Jolla, California
- Marvin Fishman*, Ph.D., Division of Applied Immunology, The Public Health Research Institute of the City of New York, Inc., Foot of East 16th Street, New York 9, New York
- Edward C. Franklin*, M.D., Department of Medicine, New York University School of Medicine, 550 First Avenue, New York 16, New York
- Hugh Fudenberg*, M.D., Department of Medicine, University of California School of Medicine, San Francisco Medical Center, San Francisco, California
- Burton Goldberg*, M.D., Department of Pathology, New York University School of Medicine, 550 First Avenue, New York 16, New York
- Robert A. Good*, M.D., Professor of Pediatrics, University of Minnesota, The Medical School, Heart Hospital Research Laboratory, Minneapolis 14, Minnesota
- Howard C. Goodman*, M.D., Head, Clinical Immunology Section, Laboratory of Immunology, National Institute of Allergy and Infectious Diseases, National Institutes of Health, Bethesda 14, Maryland
- J. L. Gowans*, M.D., Sir William Dunn School of Pathology, University of Oxford, Oxford, England

- Pierre Grabar*, Professor, Institut Pasteur, 25 Rue du Docteur Roux, Paris, France
- Morten Harboe*, M.D., University of Oslo, Ullevall Hospital, Institute for Experimental Medical Research, Oslo, Norway
- William J. Harrington*, M.D., Washington University School of Medicine, St. Louis, Missouri
- Milan Hašek*, M.D., Czechoslovak Academy of Sciences, Institute of Experimental Biology and Genetics, Prague 6, Czechoslovakia
- Walter Heymann*, M.D., Associate Professor of Pediatrics, Western Reserve University School of Medicine, Cleveland, Ohio
- Halsted R. Holman*, M.D., Professor of Medicine, Department of Medicine, Stanford University School of Medicine, Palo Alto, California
- John H. Humphrey*, M.D., Medical Research Council, National Institute for Medical Research, The Ridgeway, Mill Hill, London N.W. 7, England
- James H. Jandl*, M.D., Thorndike Memorial Laboratory, Boston City Hospital, Boston 18, Massachusetts
- Elvin Kabat*, Ph.D., Neurological Institute, 710 W. 168th Street, New York 32, New York
- Melvin H. Kaplan*, M.D., Cleveland Metropolitan General Hospital, 3395 Scranton Road, Cleveland 9, Ohio
- Richard M. Krause*, M.D., Washington University School of Medicine, St. Louis, Missouri
- Henry G. Kunkel*, M.D., Hospital-Rockefeller Institute, New York 21, New York
- John P. Leddy*, M.D., The University of Rochester, School of Medicine, Rochester 20, New York
- F. Gilbert McMahon*, M.D., The Upjohn Company, Kalamazoo, Michigan
- T. Makinodan*, M.D., Biology Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee
- Carlos Martinez*, M.D., University of Minnesota Medical School, Minneapolis 14, Minnesota
- Peter A. Miescher*, M.D., Professor of Medicine, New York University School of Medicine, 550 First Avenue, New York 16, New York
- Felix Milgrom*, M.D., Department of Bacteriology and Immunology, The University of Buffalo School of Medicine, Buffalo 14, New York
- Henry Z. Movat*, M.D., Associate Professor, Department of Pathology, University of Toronto, Toronto 2, Canada
- Hans J. Müller-Eberhard*, M.D., The Rockefeller Institute, New York 21, New York
- Gus J. V. Nossal*, M.D., Deputy Director (Immunology), The Walter and Eliza Hall Institute of Medical Research, Melbourne, Australia
- Abraham G. Osler*, Ph.D., Associate Professor of Microbiology and Medicine, The John Hopkins University School of Medicine, Baltimore 5, Maryland
- Zoltan Ovary*, M.D., Associate Professor, Department of Pathology, New York University School of Medicine, 550 First Avenue, New York 16, New York
- E. F. Pfeiffer*, Associate Professor of Medicine, I. Medizinische Universitätsklinik, Frankfurt/Main, 14 L. Rehn-Strasse, Germany

- David Pressman*, Ph.D., Director of Cancer Research in Biochemistry, Roswell Park Memorial Institute, Buffalo 3, New York
- Jonas Salk*, M.D., Salk Institute for Biological Research, La Jolla, California
- Beatrice C. Seegal*, M.D., College of Physicians and Surgeons, Columbia University, New York 32, New York
- Michael Sela*, M.D., Associate Professor, Department of Biophysics, The Weizmann Institute of Science, Rehovath, Israel
- N. Raphael Shulman*, M.D., Chief, Clinical Hematology Branch, National Institute of Arthritis and Metabolic Diseases, National Institutes of Health, Bethesda 14, Maryland
- Sidney Shulman*, M.D., University of Buffalo, Buffalo, New York
- Hans Spiegelberg*, M.D., Department of Medicine, New York University School of Medicine, 550 First Avenue, New York 16, New York
- Raymond W. Steblay*, M.D., The University of Chicago, Department of Obstetrics and Gynecology, Chicago 37, Illinois
- Jaroslav Sterzl*, M.D., Head, Department of Immunology, Institute of Microbiology, Czechoslovak Academy of Sciences, Prague 6, Czechoslovakia
- David W. Talmage*, M.D., University of Colorado Medical Center, Denver 20, Colorado
- Jonathan W. Uhr*, M.D., Associate Professor of Medicine, New York University School of Medicine, 550 First Avenue, New York 16, New York
- J. J. van Loghem*, Professor of Immunopathology, Director, Central Laboratory of the Netherlands Red Cross Blood Transfusion Service, Plesmanlaan 125, Amsterdam, Netherlands
- John H. Vaughan*, M.D., Associate Professor of Medicine, The University of Rochester School of Medicine, Rochester 20, New York
- Jacinto J. Vazquez*, M.D., Division of Experimental Pathology, Scripps Clinic and Research Foundation, La Jolla, California
- William O. Weigle*, Ph.D., Division of Experimental Pathology, Scripps Clinic and Research Foundation, La Jolla, California
- Ernest Witebsky*, M.D., Chairman, Department of Bacteriology and Immunology, University of Buffalo Medical School, Buffalo, New York
- Morris Ziff*, M.D., Department of Internal Medicine, The University of Texas, Southwestern Medical School, Dallas 35, Texas
