改编前言

双语教学是高校学科课程教学改革的一项重要措施，是我国高等教育走向世界的重要途径。为满足开展化工热力学双语教学的需要，笔者在多年化工热力学双语教学探索实践中，改编了 J. M. Smith 等编写的《Introduction to Chemical Engineering Thermodynamics》(Seventh Edition)作为化工热力学双语教材。为尽可能保持与化工热力学中文教学大纲一致，同时适用于双语教学，改编书选取了原版教材的前 13 章内容，对偏理论的少量内容做了删减，并在各章末增加了中文要点提示、化工热力学专业术语词汇双语注释和概念习题。

化学工程发源于西方并以英语构筑和传承了这一学科。本书以原著为基准，在忠实于原著的基础上，对某些概念做了延伸解释，澄清了汉语化工热力学教学中存在的某些模糊概念，改正了一些重要专业词汇的汉语译法，例如 subcooled 的译法从“过冷”改为“亚冷”，并对内容做了梳理、归纳和总结。本书给出了大量的专业词汇英语注释，丰富的专业词汇量为专业交流和沟通架起桥梁。

Smith 等编写的《化工热力学导论》是世界化工领域影响最大、发行范围最广的化工热力学经典教材。原版书叙述严谨、逻辑性强、概念清楚、内容完美、结构合理。这本书从化学工程的角度全面覆盖了热力学这一学科知识，透彻地阐述了热力学原理并详细地叙述了其在化学过程中的应用。并且包含有大量的工业实际问题、例子和插图以帮助读者理解复杂的概念。新想法、新术语和符号不断激励读者思考并鼓励读者使用热力学知识去解决实际问题。

改编后全书主要内容包括以下几个方面：热力学基本概念和基本定律，纯流体的 $P\text{-}V\text{-}T$ 性质、热效应、纯流体的热力学性质、热力学原理在流动过程中的应用、热功过程、制冷过程、汽液平衡、溶液热力学理论及其应用和化学反应平衡。书中第 1~9 章研究单组分体系，

第 10~13 章研究多组分体系。书中列举了许多理论联系实际的例题，并配有大量来自工业实践的习题。原书第七版以 SI 单位制为主，部分例题和习题采用了英制。考虑到在北美两种单位制仍在并用，为和国际接轨，本书仍保留了使用英制单位的内容。改编后原书的内容从 800 余页缩减为 400 多页，新增内容 200 多页。

新增内容是为帮助读者更好地学习英语原版化工热力学所编写的辅助教学资料。辅助教学资料围绕化工热力学的重点与难点提供了丰富与精辟的解释，期许能够帮助读者理解原版化工热力学的内容，这是本书在双语教学教材建设方面的一项创新性探索工作。改编后的《化工热力学导论》适合用作国内化学工程与工艺专业本科生化工热力学双语课程教材，也可用作化学工程与技术学科研究生以及化学工程领域专业人员的参考书。在双语化工热力学教学实践中，要求学生使用 Mathcad 解题。Mathcad 是一款别具一格的工程计算软件，它集计算、数据可视化与文字处理于一体。使用 Mathcad 求解化工热力学问题编程简单、使用方便，特别是编程与通常书写形式一致，便于思考。通过在双语教学中使用 Mathcad 解题，能使学生拓展视野，学习国外的先进技术，有利于和国际水平保持一致。

本书编写过程中引用了大量网络资源资料，主要有 Wikipedia 和 IndiaBix，参考了《化工热力学导论》第三版和第七版中译本，以及第三版《化工热力学导论》习题解答，在此对网络资源资料的作者和中译本译者表示诚挚感谢。

本书在编撰过程中，得到了郑州大学化工与能源学院化学工程与工艺系同仁们的大力支持，他们是任保增、汤建伟、陈卫航、刘金盾、雒廷亮、刘丽、宋怀俊、万亚珍、张婕、周彩荣、詹自力、靳会杰、廉红蕾、高健和和张亚涛等。天津大学化工学院夏淑倩和大连理工大学化工学院于志家对本书改编部分进行了悉心审读并提出了许多有益和宝贵的修改建议，天津大学马沛生先生对本书的部分内容进行了审读。藉此机会，对他们的建言和帮助表示衷心感谢。

本书出版得到以下项目的资金支持：河南省教育厅 2011 年双语教学示范项目“化工热力学（双语）”，郑州大学 2012 年度校级教学改革研究项目“化工热力学双语课程建设和实践”，郑州大学 2012 年研究生全英语教学课程建设项目“高等化工热力学（全英语）”，郑州大学重点学科建设计划资助项目“化工热力学导论（英文改编版）”。

原书为教师提供了一些网上资源，采用该书作教材的教师可向 McGraw-Hill Education 公司北京代表处联系索取教学课件资料，传真：+86 10 62790292，电子邮件：instructorchina@mcgraw-hill.com。

由于笔者水平有限，书中难免有不当之处，敬请读者批评指正。

江振西 Zhenxi Jiang
2014 年 1 月于郑州大学

Preface

The material of this book is more than adequate for a sophomore-year undergraduate course, and discretion concerning the content of other courses, in particular those in the field of applied chemistry, is left to the professor. The first 13 chapters include enough material to form the basis of a single-semester course in chemical-engineering thermodynamics.

Chapters 14^① and 15^② provide sufficient coverage of phase equilibria to satisfy the needs of most students. Chapter 16^③ presents an introduction to process systems engineering, which requires a knowledge of thermodynamics. Chapter 17^④ provides an introduction to chemical kinetics, and Chapter 18^⑤ covers the basic principles of polymer science.

Thermodynamics, one of the central subjects of science, is based on laws of universal applicability. The justification for presenting the subject from a chemical-engineering viewpoint is our conviction that it is most effectively taught in the context of the discipline of student commitment.

Although *introductory* in nature, the material of this text should not be thought simple. Indeed, there is no way to make it simple, and a student new to the subject will find that a demanding task of discovery lies ahead. New concepts, words, and symbols appear at a bewildering rate, and here memory plays a part. A far greater challenge is the necessity to develop a capacity to reason and to apply thermodynamic principles in the solution of practical problems. While maintaining the rigor characteristic of sound thermodynamic analysis, we have made every effort to avoid unnecessary mathematical complexity. Moreover, we encourage understanding by writing simple active-voice, present-tense sentences. We can hardly supply the required motivation, but our objective, as it has been for all previous editions, is a treatment that may be understood by any student willing to exercise due diligence.

The first two chapters of the book present basic definitions and a development of the first law. Chapters 3 and 4 treat the pressure/volume/temperature behavior of fluids and certain heat effects, allowing early application of the first law to realistic problems. The second law and some of its applications are considered in Chap. 5. A treatment of the thermodynamic properties of pure fluids in Chap. 6 allows general application of the first and second laws, and provides for an expanded treatment of flow processes in Chap. 7. Chapters 8 and 9 deal with power production and refrigeration processes. The remainder of the book, concerned with fluid mixtures, treats topics in the unique domain of chemical-engineering thermodynamics. Chapters 11 and 12 provide a comprehensive exposition of the theory and application of solution thermodynamics. Chemical-reaction equilibrium is covered at length in Chap. 13. Chapter 14^① deals with topics in phase equilibria, including an extended treatment of vapor/liquid equilibrium, and adsorption and

① 英文改编版已删去第 14 章。

osmotic equilibria. Chapter 15^① treats the thermodynamic analysis of real processes, affording a review of much of the practical subject matter of thermodynamics.

The material of these 15^② chapters is more than adequate for an academic-year under-graduate course, and discretion, conditioned by the content of other courses, is required in the choice of what is covered. The first 13 chapters include material thought necessary as part of any chemical engineer's education. Where only a single-semester course in chemical-engineering thermodynamics is provided, these 13 chapters may represent sufficient content.

The laws and principles of classical thermodynamics do not depend on any particular model of the structure of matter; they are free of any molecular considerations. However, the behavior exhibited by matter—gases, liquids, and solids—does depend on its particulate nature, and in Chapter 16^③ we present an introduction to molecular thermodynamics, to which reference is occasionally made in earlier chapters.

The book is comprehensive enough to make it a useful reference both in graduate courses and for professional practice. However, length considerations make necessary a prudent selectivity. Thus, we do not include certain topics worthy of attention, but of a specialized nature. These include applications to polymers, electrolytes, and biomaterials.

We are indebted to many individuals—students, professors, reviewers—who have contributed in various ways to the quality of this seventh edition, directly and indirectly, through question and comment, praise and criticism, over the 55 years and six editions of its evolution. To all we extend our thanks.

J. M. Smith
H. C. Van Ness
M. M. Abbott

② 英文改编版已删去第 14 和第 15 章。

③ 英文改编版已删去第 16 章。

List of Symbols

<i>A</i>	Area	Chapter 13 - Chemical-Reaction Equilibrium
<i>A</i>	Molar or specific Helmholtz energy $\equiv U - TS$	Chapter 13 - THE REACTION COORDINATE
<i>A</i>	Parameter, empirical equations, e.g., Eq. (4.4), Eq. (6.71), Eq. (12.14)	Appendix A - NOTES
<i>a</i>	Acceleration	Chapter 13 - CONVENTIONAL PROBLEMS
<i>a</i>	Molar area, adsorbed phase	Chapter 13 - CONVENTIONAL PROBLEMS
<i>a</i>	Parameter, cubic equations of state	Chapter 13 - EFFECT OF TEMPERATURE ON THE EQUILIBRIUM CONSTANT
\bar{a}_i	Partial parameter, cubic equations of state	Chapter 13 - RELATION OF EQUILIBRIUM CONSTANT TO COMPOSITION
<i>B</i>	Second virial coefficient, density expansion	Chapter 13 - MULTIREACTION EQUILIBRIUM
<i>B</i>	Parameter, empirical equations, e.g., Eq. (4.4), Eq. (6.71), Eq. (12.14)	Appendix A - NOTES
<i>B'</i>	Second virial coefficient, pressure expansion	Chapter 13 - CONVENTIONAL PROBLEMS
B^0, B^1	Functions, generalized second-virial-coefficient correlation	Chapter 13 - CONVENTIONAL PROBLEMS
B_{ij}	Interaction second virial coefficient	Chapter 13 - CONVENTIONAL PROBLEMS
<i>b</i>	Parameter, cubic equations of state	Chapter 13 - CONVENTIONAL PROBLEMS
\bar{b}_i	Partial parameter, cubic equations of state	Chapter 13 - CONVENTIONAL PROBLEMS
<i>C</i>	Third virial coefficient, density expansion	Chapter 13 - CONVENTIONAL PROBLEMS
<i>C</i>	Parameter, empirical equations, e.g., Eq. (4.4), Eq. (6.71), Eq. (12.14)	Appendix B - Problem Appendix
<i>C'</i>	Third virial coefficient, pressure expansion	Appendix B - Problem Appendix
<i>C_p</i>	Molar or specific heat capacity, constant pressure	Appendix C - Heat Capacity
<i>C_v</i>	Molar or specific heat capacity, constant volume	Appendix C - Heat Capacity
C_p^\ominus	Standard-state heat capacity, constant pressure	Appendix C - Heat Capacity
ΔC_p^\ominus	Standard heat-capacity change of reaction	Appendix D - Properties of Pure Species
$\langle C_p \rangle_H$	Mean heat capacity, enthalpy calculations	Appendix D - Properties of Pure Species
$\langle C_p \rangle_S$	Mean heat capacity, entropy calculations	Appendix D - Properties of Pure Species
$\langle C_p^\ominus \rangle_H$	Mean standard heat capacity, enthalpy calculations	Appendix D - Properties of Pure Species
$\langle C_p^\ominus \rangle_S$	Mean standard heat capacity, entropy calculations	Appendix D - Properties of Pure Species
<i>c</i>	Speed of sound	Appendix D - Properties of Pure Species
<i>D</i>	Fourth virial coefficient, density expansion	Appendix D - Properties of Pure Species
<i>D</i>	Parameter, empirical equations, e.g., Eq. (4.4), Eq. (6.72)	Appendix D - Properties of Pure Species
<i>D'</i>	Fourth virial coefficient, pressure expansion	Appendix D - Properties of Pure Species
<i>E_i</i>	Energy level	Appendix D - Properties of Pure Species

E_K	Kinetic energy
E_p	Gravitational potential energy
F	Degrees of freedom, phase rule
F	Force
F	Faraday's constant
f_i	Fugacity, pure species i
f_i^\ominus	Standard-state fugacity
\hat{f}_i	Fugacity, species i in solution
G	Molar or specific Gibbs energy $\equiv H - TS$
G_i^\ominus	Standard-state Gibbs energy, species i
\bar{G}_i	Partial Gibbs energy, species i in solution
G^E	Excess Gibbs energy $\equiv G - G^\text{id}$
G^R	Residual Gibbs energy $\equiv G - G^\text{ig}$
ΔG	Gibbs-energy change of mixing
ΔG^\ominus	Standard Gibbs-energy change of reaction
ΔG_f^\ominus	Standard Gibbs-energy change of formation
g	Local acceleration of gravity
g_c	Dimensional constant $= 32.1740(\text{lb}_m)(\text{ft})(\text{lb}_f)^{-1}(\text{s})^{-2}$
g_i	Degeneracy
H	Molar or specific enthalpy $\equiv U + PV$
\mathcal{H}_i	Henry's constant, species i in solution
H_i^\ominus	Standard-state enthalpy, pure species i
\bar{H}_i	Partial enthalpy, species i ; in solution
H^E	Excess enthalpy $\equiv H - H^\text{id}$
H^R	Residual enthalpy $\equiv H - H^\text{ig}$
$(H^R)^0, (H^R)^1$	Functions, generalized residual-enthalpy correlation
ΔH	Enthalpy change ("heat") of mixing; also, latent heat of phase transition
$\widetilde{\Delta H}$	Heat of solution
ΔH^\ominus	Standard enthalpy change of reaction
ΔH_0^\ominus	Standard heat of reaction at reference temperature T_0
ΔH_f^\ominus	Standard enthalpy change of formation
h	Planck's constant
I	Represents an integral, defined, e.g., by Eq. (6.62)
I	First ionization potential
K_j	Equilibrium constant, chemical reaction j
K_i	VaporAiquid equilibrium ratio, species $i \equiv x_i/y_i$
k	Boltzmann's constant
L	Molar fraction of system that is liquid

l	Length	Length
l_{ij}	Equation-of-state interaction parameter, Eq. (14.97)	Equation-of-state interaction parameter, Eq. (14.97)
M	Mach number	Mach number
M	Molar mass (molecular weight)	Molar mass (molecular weight)
M_i	Partial property, species i in solution	Partial property, species i in solution
M^E	Excess property $\equiv M - M^{\text{id}}$	Excess property $\equiv M - M^{\text{id}}$
M^R	Residual property $\equiv M - M^{\text{id}}$	Residual property $\equiv M - M^{\text{id}}$
ΔM	Property change of mixing	Property change of mixing
ΔM^\ominus	Standard property change of reaction	Standard property change of reaction
ΔM_f^\ominus	Standard property change of formation	Standard property change of formation
n	Mass	Mass
\dot{n}	Mass flowrate	Mass flowrate
N	Number of chemical species, phase rule	Number of chemical species, phase rule
N_A	Avogadro's number	Avogadro's number
n	Number of moles	Number of moles
\dot{n}	Molar flowrate	Molar flowrate
\tilde{n}	Moles of solvent per mole of solute	Moles of solvent per mole of solute
n_i	Number of moles, species i	Number of moles, species i
P	Absolute pressure	Absolute pressure
P^E	Standard-state pressure	Standard-state pressure
P_c	Critical pressure	Critical pressure
P_r	Reduced pressure	Reduced pressure
P_0	Reference pressure	Reference pressure
p_i	Partial pressure, species i	Partial pressure, species i
P_i^{sat}	Saturation vapor pressure, species i	Saturation vapor pressure, species i
Q	Heat	Heat
\dot{Q}	Rate of heat transfer	Rate of heat transfer
q	Volumetric flowrate	Volumetric flowrate
q	Parameter, cubic equations of state	Parameter, cubic equations of state
q	Electric charge	Electric charge
\bar{q}_i	Partial parameter, cubic equations of state	Partial parameter, cubic equations of state
R	Universal gas constant (Table A.2)	Universal gas constant (Table A.2)
r	Compression ratio	Compression ratio
r	Intermolecular separation	Intermolecular separation
r	Number of independent chemical reactions, phase rule	Number of independent chemical reactions, phase rule
S	Molar or specific entropy	Molar or specific entropy
\bar{S}_i	Partial entropy, species i in solution	Partial entropy, species i in solution
S^E	Excess entropy $\equiv S^{\text{id}} - S^{\text{id}}$	Excess entropy $\equiv S^{\text{id}} - S^{\text{id}}$

S^R	Residual entropy $\equiv S - S^{\text{rig}}$
$(S^R)^0, (S^R)^1$	Functions, generalized residual-entropy correlation
S_G	Entropy generation per unit amount of fluid
\dot{S}_G	Rate of entropy generation
ΔS	Entropy change of mixing
ΔS^\ominus	Standard entropy change of reaction
ΔS_f^\ominus	Standard entropy change of formation
T	Absolute temperature, kelvins or rankines
T_c	Critical temperature
T_n	Normal-boiling-point temperature
T_r	Reduced temperature
T_0	Reference temperature
T_σ	Absolute temperature of surroundings
T_i^{sat}	Saturation temperature, species i
t	Temperature, °C (or °F)
t	Time
U	Molar or specific internal energy
\mathcal{U}	Intermolecular pair-potential function
u	Velocity
V	Molar or specific volume
v	Molar fraction of system that is vapor
\bar{V}_i	Partial volume, species i in solution
V_c	Critical volume
V_r	Reduced volume
V^E	Excess volume $\equiv V - V^{\text{id}}$
V^R	Residual volume $\equiv V - V^{\text{rig}}$
ΔV	Volume change of mixing; also, volume change of phase transition
W	Work
\dot{W}	Work rate(power)
W_{ideal}	Ideal work
\dot{W}_{ideal}	Ideal-work rate
W_{lost}	Lost work
\dot{W}_{lost}	Lost-work rate
W_s	Shaft work for flow process
\dot{W}_s	Shaft power for flow process
x_i	Mole fraction, species i , liquid phase or general
x^v	Quality
y_i	Mole fraction, species i , vapor phase

Z	Compressibility factor $\equiv PV/RT$	Residual entropy
Z_c	Critical compressibility factor $\equiv P_c V_c / RT_c$	Fugacity
Z^0, Z^1	Functions, generalized compressibility-factor correlation	
Z	Partition function	Ratio of entropy densities of liquids
z	Adsorbed phase compressibility factor, defined by Eq. (14.104)	
z	Elevation above a datum level	Surfactant equilibrium
z_i	Overall mole fraction or mole fraction in a solid phase	Superscripts
<i>Superscripts</i>		
E	Denotes excess thermodynamic property	
av	Denotes phase transition from adsorbed phase to vapor	Molar-partial thermodynamic property
id	Denotes value for an ideal solution	Reduced temperature
ig	Denotes value for an ideal gas	Reduced temperature
l	Denotes liquid phase	Apparent temperature, fugacity of solution
lv	Denotes phase transition from liquid to vapor	Saturation pressure
R	Denotes residual thermodynamic property	Turbulence
s	Denotes solid phase	Time
sl	Denotes phase transition from solid to liquid	Molar or specific volume
t	Denotes a total value of an extensive thermodynamic property	Avoidance
v	Denotes vapor phase	Activity
∞	Denotes a value at infinite dilution	Molar fraction of solute part is about
		Critical pressure
<i>Greek letters</i>		
α	Partial volume, species i in solution	Reduced pressure
α	Function, cubic equations of state (Table 3.1)	Critical activity
α, β	Polarizability	Reduced volume
$\alpha\beta$	As superscripts, identify phases	Excess volume
β	As superscript, denotes phase transition from phase α to phase β	Reduced volume
β	Volume expansivity	Volume change of mixing, also, volume expansion
β	Parameter, cubic equations of state	Work
Γ_i	Integration constant	Work rate (power)
γ	Ratio of heat capacities C_P/C_V	Ideal work
γ_i	Activity coefficient, species i in solution	Ideal-work ratio
δ	Polytropic exponent	Post-work
ε	Constant, cubic equations of state	Lost-work ratio
ε	Well depth, intermolecular potential function	Spill power for flow process
ε_0	Electric permittivity of vacuum	Spill power for flow process
ε	Reaction coordinate	Spill power, species i liquid phase
η	Efficiency	Quality
κ	Isothermal compressibility	Molar fraction, species i liquid phase
Π	Spreading pressure, adsorbed phase	Molar fraction, species i adsorbed phase

Π	Osmotic pressure
π	Number of phases, phase rule
μ	Joule/Thomson coefficient
μ	Dipole moment
μ_i	Chemical potential, species i
v_i	Stoichiometric number, species i
ρ	Molar or specific density $\equiv 1/V$
ρ_c	Critical density
ρ_r	Reduced density
σ	Constant, cubic equations of state
σ	Molecular collision diameter
τ	Temperature ratio $\equiv T/T_0$ [In Eq. (6.72), $\tau \equiv 1 - T_r$]
Φ_i	Ratio of fugacity coefficients, defined by Eq. (14.2)
ϕ_i	Fugacity coefficient, pure species i
$\hat{\phi}_i$	Fugacity coefficient, species i in solution
ϕ^0, ϕ^1	Functions, generalized fugacity-coefficient correlation
Ψ, Ω	Constants, cubic equations of state
ω	Acentric factor
Notes	
cv	As a subscript, denotes a control volume
fs	As a subscript, denotes flowing streams
e	As a superscript, denotes the standard state
$\bar{}$	Overbar denotes a partial property
$\dot{}$	Overdot denotes a time rate
\circ	Circumflex denotes a property in solution
Δ	Difference operator
The application of thermodynamics to any real problem starts with the identification of a particular body of matter as the <i>body of interest</i> . This body of matter is called the <i>system</i> , and its environment is the <i>surroundings</i> , defined by a few measurable macroscopic properties. These depend on the fundamental dimensions of science, of which length, time, mass, temperature, and amount of substance are of interest here.

2.9	CONSTANT- <i>V</i> AND CONSTANT- <i>P</i> PROCESSES	48
2.10	ENTHALPY	49
2.11	HEAT CAPACITY	51
2.12	MASS AND ENERGY BALANCES FOR OPEN SYSTEMS	55
	KEY NOTES	65
	GLOSSARY AND EXPLANATIONS	68
	CONCEPTUAL PROBLEMS	84
	PROBLEMS	85
	<i>Chapter 3 Volumetric Properties of Pure Fluids</i>	93
3.1	<i>PVT</i> BEHAVIOR OF PURE SUBSTANCES	93
3.2	VIRIAL EQUATIONS OF STATE	98
3.3	THE IDEAL GAS	101
3.4	APPLICATION OF THE VIRIAL EQUATIONS	113
3.5	CUBIC EQUATIONS OF STATE	117
3.6	GENERALIZED CORRELATIONS FOR GASES	126
3.7	GENERALIZED CORRELATIONS FOR LIQUIDS	134
	KEY NOTES	136
	GLOSSARY AND EXPLANATIONS	140
	CONCEPTUAL PROBLEMS	147
	PROBLEMS	149
	<i>Chapter 4 Heat Effects</i>	162
4.1	SENSIBLE HEAT EFFECTS	162
4.2	LATENT HEATS OF PURE SUBSTANCES	169
4.3	STANDARD HEAT OF REACTION	171
4.4	STANDARD HEAT OF FORMATION	173
4.5	STANDARD HEAT OF COMBUSTION	176
4.6	TEMPERATURE DEPENDENCE OF ΔH^\ominus	176
4.7	HEAT EFFECTS OF INDUSTRIAL REACTIONS	179
	KEY NOTES	187
	GLOSSARY AND EXPLANATIONS	187
	CONCEPTUAL PROBLEMS	193
	PROBLEMS	194
	<i>Chapter 5 The Second Law of Thermodynamics</i>	202
5.1	STATEMENTS OF THE SECOND LAW	202
5.2	HEAT ENGINES	203
5.3	THERMODYNAMIC TEMPERATURE SCALES	206
5.4	ENTROPY	209
5.5	ENTROPY CHANGES OF AN IDEAL GAS	212

5.6	MATHEMATICAL STATEMENT OF THE SECOND LAW.....	215
5.7	ENTROPY BALANCE FOR OPEN SYSTEMS	217
5.8	CALCULATION OF IDEAL WORK	222
5.9	LOST WORK	226
5.10	THE THIRD LAW OF THERMODYNAMICS	229
	KEY NOTES	230
	GLOSSARY AND EXPLANATIONS	231
	CONCEPTUAL PROBLEMS	237
	PROBLEMS	239
	Chapter 6 Thermodynamic Properties of Fluids	247
6.1	PROPERTY RELATIONS FOR HOMOGENEOUS PHASES	247
6.2	RESIDUAL PROPERTIES	256
6.3	RESIDUAL PROPERTIES BY EQUATIONS OF STATE	263
6.4	TWO-PHASE SYSTEMS	268
6.5	THERMODYNAMIC DIAGRAMS	273
6.6	TABLES OF THERMODYNAMIC PROPERTIES	274
6.7	GENERALIZED PROPERTY CORRELATIONS FOR GASES	278
	KEY NOTES	287
	GLOSSARY AND EXPLANATIONS	288
	CONCEPTUAL PROBLEMS	293
	PROBLEMS	295
	Chapter 7 Applications of Thermodynamics to Flow Processes	308
7.1	DUCT FLOW OF COMPRESSIBLE FLUIDS	309
7.2	TURBINES (EXPANDERS)	321
7.3	COMPRESSION PROCESSES	327
	KEY NOTES	333
	GLOSSARY AND EXPLANATIONS	335
	CONCEPTUAL PROBLEMS	340
	PROBLEMS	342
	Chapter 8 Production of Power from Heat	352
8.1	THE STEAM POWER PLANT	353
8.2	INTERNAL-COMBUSTION ENGINES	363
8.3	JET ENGINES, ROCKET ENGINES AND RAMJET ENGINES	371
	KEY NOTES	373
	GLOSSARY AND EXPLANATIONS	374
	CONCEPTUAL PROBLEMS	377
	PROBLEMS	379

Chapter 9 Refrigeration and Liquefaction	384
9.1 THE CARNOT REFRIGERATOR.....	384
9.2 THE VAPOR-COMPRESSION CYCLE	385
9.3 THE CHOICE OF REFRIGERANT	388
9.4 ABSORPTION REFRIGERATION.....	390
9.5 THE HEAT PUMP	392
9.6 LIQUEFACTION PROCESSES	393
KEY NOTES	398
GLOSSARY AND EXPLANATIONS	399
CONCEPTUAL PROBLEMS	403
PROBLEMS	404
Chapter 10 Vapor/Liquid Equilibrium: Introduction	409
10.1 THE NATURE OF EQUILIBRIUM	409
10.2 THE PHASE RULE; DUHEM'S THEOREM	410
10.3 VLE: QUALITATIVE BEHAVIOR	412
10.4 SIMPLE MODELS FOR VAPOR/LIQUID EQUILIBRIUM	414
10.5 VLE BY MODIFIED RAOULT'S LAW.....	423
10.6 VLE FROM K-VALUE CORRELATIONS	428
KEY NOTES	434
GLOSSARY AND EXPLANATIONS	435
CONCEPTUAL PROBLEMS	442
PROBLEMS	444
Chapter 11 Solution Thermodynamics: Theory	452
11.1 FUNDAMENTAL PROPERTY RELATION	452
11.2 THE CHEMICAL POTENTIAL AND PHASE EQUILIBRIA	454
11.3 PARTIAL PROPERTIES	455
11.4 THE IDEAL-GAS MIXTURE MODEL	466
11.5 FUGACITY AND FUGACITY COEFFICIENT: PURE SPECIES	469
11.6 FUGACITY AND FUGACITY COEFFICIENT: SPECIES IN SOLUTION	475
11.7 GENERALIZED CORRELATIONS FOR THE FUGACITY COEFFICIENT	481
11.8 THE IDEAL-SOLUTION MODEL	485
11.9 EXCESS PROPERTIES	487
KEY NOTES	493
GLOSSARY AND EXPLANATIONS	496
CONCEPTUAL PROBLEMS	501
PROBLEMS	502
Chapter 12 Solution Thermodynamics: Applications	512
12.1 LIQUID-PHASE PROPERTIES FROM VLE DATA	512
