## Preface

Volumes XLI and XLII of "Methods in Enzymology" report new procedures appearing in the literature since 1965. As for Volume IX, the procedures included are for dissimilatory reactions between disaccharides and pyruvate. A few important reactions of pyruvate leading to fermentation end products are also included. The originally planned single volume became two volumes in recognition of the greatly increased number of pages needed to adequately cover this expanding field. The distribution of material between the volumes is arbitrary.

I wish to thank all of the authors for their contributions and their cooperation. It is a pleasure to recognize Ms. Patti Prokopp for her expert secretarial assistance.

W. A. Wood
