MICROBIOLOGY OF WATERBORNE DISEASES

Second Edition

PREFACE

Waterborne diseases, specifically those caused by unsafe drinking water, present a serious global health threat. Understanding the pathogens that cause these diseases can help us to develop better preventative and control methods globally. The 2nd edition of *The Microbiology of Waterborne Diseases* is a comprehensive text that provides an in-depth account of all aspects of waterborne pathogens of public health significance.

Section one of the book discusses waterborne pathogens and the role biofilms play in their survival and dissemination. Sections two, three and four highlight the major bacterial, viral and protozoa associated with water. Each pathogen-specific chapter covers the fundamentals of microbiology of each pathogen including their survival and control in biofilms, and a new section highlighting methods that have been used for control. In addition, each chapter highlights methods that have been employed for detecting each waterborne pathogen and the risks each pathogen presents to water users is also discussed. Section four of the book provides an overview of the methods employed for microbial control with the final section of the book highlighting the implications of global warming and climate on waterborne diseases.

This updated reference will continue to serve as an indispensable reference for microbiologists, public health officials, water and wastewater treatment professionals, engineers, environmental health officers and students in the infectious disease fields.

Professor Steven L. Percival
The University of Liverpool

DEDICATION

Steven Percival would like to dedicate this book to Carol, Alex, Tom, Mum and Dad. Thank you!

Rachel Chalmers would like to dedicate this book to the memory of Joan Shields whose work contributed much to our understanding of protozoan parasites in drinking and recreational waters.

David Williams would like to dedicate this book to Lorna, Daniel, Ailish Calum, Sioned and Anne. In memory of Eirwyn.

Nick Gray would like to dedicate this book to Lucy, Catriona and Rebecca.

CONTRIBUTORS

Mark Burr

Research Assistant Professor, Department of Land Resources and Environmental Sciences, Montana State University, Bozeman, Montana, USA

Alison Burrells

Moredun Research Institute, Penicuik, Midlothian, Scotland

Anne Camper

Professor, Center for Biofilm Engineering, Montana State University, Bozeman, Montana, USA

Rachel M. Chalmers

Head of Cryptosporidium Reference Unit, Public Health Wales, Singleton Hospital, Swansea, UK

Nicholas F. Gray

Professor of Environmental Sciences, Centre for the Environment, School of Natural Sciences, Trinity College, University of Dublin, Dublin 2, Ireland

Frank Katzer

Moredun Research Institute, Penicuik, Midlothian, Scotland

Andreas Nocker

Lecturer in Drinking Water Microbiology, Cranfield Water Science Institute, School of Applied Sciences, Cranfield University, Cranfield, UK

Marieke Opsteegh

Veterinary Epidemiologist, Laboratory for Zoonoses and Environmental Microbiology, Bilthoven, The Netherlands

Steven L. Percival

Professor of Microbiology and Anti-infectives, Surface Science Research Centre and Institute of Ageing and Chronic Disease, University of Liverpool, Liverpool, UK

Lucy J. Robertson

Professor, Parasitology Laboratory, Section for Microbiology, Immunology and Parasitology, Department of Food Safety and Infection Biology, Norwegian School of Veterinary Science, Oslo, Norway

David W. Williams

Professor of Oral Microbiology, Tissue Engineering & Reparative Dentistry, School of Dentistry, Cardiff University, Heath Park, Cardiff, UK

Peter Wyn-Jones

Professor, Institute of Pharmacy, Chemistry and Biomedical Sciences, University of Sunderland, UK

Marylynn V. Yates

Professor, College of Natural and Agricultural Sciences, University of California, Riverside,
California, USA

CONTENTS

<i>Preface</i>	<i>xvii</i>
<i>Dedication</i>	<i>xix</i>
<i>Contributors</i>	<i>xxi</i>

PART ONE: INTRODUCTION

1. Pathogens in Water and Biofilms	3
Andreas Nocker, Mark Burr, Anne Camper	
Introduction	3
Biofilm Formation and Pathogen Adhesion to Biofilms	5
Factors Influencing Biofilm Formation	8
Growth in Biofilms	9
How Pathogens Enter Water and How Much Biofilm They See	10
Prevalence of Pathogens in Water Biofilms	11
Detachment: Biofilms as Sources of Pathogens	12
Advantages of Living in a 'City'	12
Survival	14
Ecology	19
Risk and Infectivity of Biofilm-Associated Pathogens	24
Conclusions	26
References	26

PART TWO: BACTERIOLOGY

2. <i>Acinetobacter</i>	35
Steven L. Percival, David W. Williams	
Basic Microbiology	35
Natural History	35
Metabolism and Physiology	36
Clinical Features	36
Survival in the Environment	38
Evidence for Growth in a Biofilm	40
Methods of Detection	41
Antimicrobial Control	42
Risk Assessment	43
References	44

3. <i>Aeromonas</i>	49
Steven L. Percival, David W. Williams	
Basic Microbiology	49
Natural History	50
Metabolism and Physiology	52
Clinical Features	52
Survival in the Environment	53
Evidence for Growth in a Biofilm	56
Methods of Detection	57
Antimicrobial Control	58
Risk Assessment	59
References	61
4. <i>Campylobacter</i>	65
Steven L. Percival, David W. Williams	
Basic Microbiology	65
Natural History	66
Metabolism and Physiology	66
Clinical Features	66
Survival in the Environment	68
Evidence for Growth in a Biofilm	70
Methods of Detection	71
Antimicrobial Control	72
Risk Assessment	73
References	74
5. <i>Cyanobacteria</i>	79
Steven L. Percival, David W. Williams	
Basic Microbiology	79
Natural History	80
Metabolism and Physiology	80
Clinical Features	81
Pathogenicity and Virulence	83
Survival in the Environment	83
Evidence for Growth in a Biofilm	85
Methods of Detection	85
Risk Assessment	85
References	87
6. <i>Escherichia coli</i>	89
Steven L. Percival, David W. Williams	
Basic Microbiology	89
Natural History	90

Metabolism and Physiology	91
Clinical Features	92
Virulence and Pathogenicity	98
EAEC	101
DAEC	101
Survival in the Environment	101
Evidence for Growth in a Biofilm	106
Methods of Detection	106
Antimicrobial Control	109
Risk Assessment	110
References	111
7. <i>Helicobacter pylori</i>	119
Steven L. Percival, David W. Williams	
Basic Microbiology	119
Natural History	120
Metabolism and Physiology	121
Clinical Features	122
Survival in the Environment	126
Evidence for Growth in a Biofilm	134
Methods of Detection	137
Antimicrobial Control	139
Risk Assessment	142

PART THREE: PROTOZOA

14. *Acanthamoeba* 263

Rachel M. Chalmers

Basic Microbiology	263
History	264
Life Cycle and Taxonomy	265
Clinical Features, Pathogenicity, Virulence and Causation	266
Treatment	267
Methods of Detection	267
Survival in Water and the Environment	269
Critical Review of the Epidemiology	270
Risk Assessment and Risk Management	271
Future Implications	273
References	273

15. *Balantidium coli* 277

Rachel M. Chalmers

Basic Microbiology	277
Natural History and Life Cycle	278
Clinical Features, Pathogenicity, Virulence, Causation and Treatment	279

Methods of Detection	280
Survival in Water and the Environment	281
Critical Review of the Epidemiology	282
Risk Assessment and Risk Management	283
Future Implications	284
References	284
16. <i>Cryptosporidium</i>	287
Rachel M. Chalmers	
Basic Microbiology	287
Natural History and Development of Drinking Water Regulation	290
Life Cycle, Taxonomy and Pathogenicity	293
Clinical Features, Treatment and Diagnosis	297
Methods of Detection in Water and Environmental Samples	303
Occurrence and Survival in the Environment	306
Prevalence and Epidemiology of Waterborne Cryptosporidiosis	312
Risk Assessment and Risk Management	315
Future Implications (Waterborne Incidences)	317
References	317
17. <i>Cyclospora cayetanensis</i>	327
Rachel M. Chalmers	
Basic Microbiology	327
Natural History and Life Cycle	327
Clinical Features, Pathogenesis and Treatment	330
Methods of Detection and Diagnosis	332
Occurrence and Survival in the Environment	335
Prevalence and Epidemiology of Waterborne Cyclosporiasis	341
Risk Assessment and Risk Management	345
Future Implications (Waterborne Incidences)	347
References	348
18. <i>Entamoeba histolytica</i>	355
