Evolution of International Environmental Regimes

Drawing specifically on the international climate regime, Simone Schiele examines international environmental regimes from a legal perspective and analyses a core feature of international regimes – their ability to evolve over time. In particular, she develops a theoretical framework based on general international law which allows for a thorough examination of the understanding of international law and the options for law-creation in international environmental regimes. The analysis therefore provides both a coherent understanding of the international climate regime and a starting point for further research in other regimes.

SIMONE SCHIELE is a junior professional officer for the Science, Assessment and Monitoring Unit of the Secretariat of the Convention on Biological Diversity (SCBD). Before joining the SCBD, she wrote this book as part of her research at the University of Augsburg, Germany.

Established in 1946, this series produces high-quality scholarship in the fields of public and private international law and comparative law. Although these are distinct legal sub-disciplines, developments since 1946 confirm their interrelations.

Comparative law is increasingly used as a tool in the making of law at national, regional and international levels. Private international law is now often affected by international conventions, and the issues faced by classical conflicts rules are frequently dealt with by substantive harmonisation of law under international auspices. Mixed international arbitrations, especially those involving state economic activity, raise mixed questions of public and private international law, while in many fields (such as the protection of human rights and democratic standards, investment guarantees and international criminal law) international and national systems interact. National constitutional arrangements relating to 'foreign affairs', and to the implementation of international norms, are a focus of attention.

The series welcomes works of a theoretical or interdisciplinary character, and those focusing on the new approaches to international or comparative law or conflicts of law. Studies of particular institutions or problems are equally welcome, as are translations of the best work published in other languages.

Acknowledgements

This dissertation was accepted by the law faculty of the University of Augsburg in February 2012. The discussion of relevant developments under the international climate regime is current through January 2013. The views expressed herein are those of the author and do not necessarily reflect the views of the United Nations.

I would like to express my gratitude to the Evangelisches Studienwerk Villigst e.V. for the scholarship I received for my research, to Professor Ivo Appel for his constant encouragement and support, and to Professor Christoph Vedder for his valuable suggestions as my second examiner. I am especially indebted to the support of my parents and sisters Isabella and Tabea, to whom I dedicate this work with heartfelt thanks.
