NATURE-INSPIRED MOBILE ROBOTICS

PREFACE

It is a pleasure to be in and to welcome everybody to beautiful Sydney, Australia for the 2013 CLAWAR (Climbing and Walking Robots) conference, the 16th in the series. It is the first time the conference has been held in Oceania. In fact, it is the very first time it has been held in the Southern Hemisphere.

As with many technical fields, robotics in Australia has its own distinctive character, to match the unique flora and fauna of the country. As befits an economy built on mining and agriculture, field robotics is very strong here, with a consequent emphasis on mobile systems. That has led to developments that have had impacts throughout the world, notably SLAM. It has also led to spectacular successes in infrastructure like the complete automation of the Port of Brisbane, and a series of infrastructure maintenance projects, papers on some of which are featured in the conference proceedings.

The CLAWAR 2013 proceedings present state of the art research findings around the theme of biologically-inspired robotics in 104 technical articles by authors from 29 countries from throughout the five continents and nearly all of robotics R&D is based on nature in some way. This is particularly true of systems that walk, run, climb, or crawl. As is usual at a CLAWAR conference there is a strong stream of papers on legged locomotion with numbers of legs from two on up. There is also a strong collection of papers on systems that climb walls, poles, or more complex structures continuing the distinctive CLAWAR themes.

Another particularly strong theme of this year's conference is robot-human interaction. This includes "natural" methods for programming humanoid robots. It also includes a very strong stream of papers on human assist devices, notably exoskeletal and prosthetic devices, but also personal care robots and mobility assistance devices designed to meet the growing challenges due to the global ageing society. There are also several papers on motion capture of humans, or animals, and on musculo-skeletal biomechanics.

Finally, but very importantly, there are papers on various aspects of the societal impact of robotics. These are issues of creating standards to create and strengthen emerging markets, and ethical considerations. It is time to move beyond Asimov's Laws of Robotics. Armed UAV's are in use every day and

armed autonomous machines for use on land, in the air, and under the sea are just around the corner. This all creates enormous ethical issues and we, who understand the technology must step forward and lead the way in creating not only the new robot technologies but have a strong say in its market developments and the urgently needed new societal rules to govern their capabilities.

The editors would like to thank members of the International Program Committee, International Advisory Committee and National Organising Committee for their efforts in reviewing the submitted articles, and the authors in addressing the comments and suggestions of the reviewers in their final submissions. It is intended that the CLAWAR 2013 proceedings will be a valuable source of reference for research and development in rapidly growing area of mobile service robotics.

CONFERENCE COMMITTEES AND CHAIRS

Conference Chairs

of Sixteenth International Conference on Climbing and Walking Robots and the Support Technologies for Mobile Machines

K. J. Waldron (General Chair)	– Stanford University, USA, & University of Technology Sydney, Australia
M. O. Tokhi (Program Chair)	– University of Sheffield, UK
G. S. Virk (IAC Chair)	– University of Gävle, Sweden

International Advisory Committee (IAC)

of Sixteenth International Conference on Climbing and Walking Robots and the Support Technologies for Mobile Machines

H. Levent Akin	– Turkey
Manuel Armada	– Spain
A. K. M. Azad	– USA
Karsten Berns	– Germany
Philippe Bidaud	– France
Bryan Bridge	– UK
N. J. Cowan	– USA
H. Fujimoto	– Japan
Krzysztof Kozlowski	– Poland
Giovanni Muscato	– Italy
Ming Xie	– Singapore

International Programme Committee (IPC)

of Sixteenth International Conference on Climbing and Walking Robots and the Support Technologies for Mobile Machines

Abdallah M.	– USA	Heyes N.	– UK
Ahmadabadi M. N.	– Iran	Hossain M. A.	– UK
Alam M. S.	– Bangladesh	Howard D.	– UK
Aldbrez F. M.	– UK	Ion I.	– Romania
Arkin R.	– USA	Jailani R.	– Malaysia

CONTENTS

Preface.....	v
Conference organisers	vii
Conference committees and chairs.....	viii
Conference sponsors and co-sponsors.....	xi
Table of contents	xiii

Section–1: Plenary presentations

TIRAMISU: FP7-Project for an integrated toolbox in humanitarian demining, focus on UGV, UAV, technical survey and close-in-detection	3
<i>Y. Baudoin and TIRAMISU Consortium</i>	

Anthropomorphic biological equipment.....	6
<i>Y. Nakamura</i>	

Muscle coordination of human locomotion.....	7
<i>M. Pandy</i>	

Exoskeleton systems for medical and civilian applications.....	8
<i>H. Kazerooni</i>	

Section–2: Assistive robotics

Optimization-based gait planning for wearable power-assist locomotor by specifying via-points	11
<i>C. Sung, T. Kagawa and Y. Uno</i>	

The designing of the exoskeleton leg with pneumatic drives.....	19
<i>A. N. Sukhanov, N. N. Bolotnik, V. G. Gradetsky, I. L. Ermolov, M. M. Knyazkov and E. A. Semyonov</i>	

Motion control algorithms for the exoskeleton equipped with pneumatic drives	27
<i>A. A. Kryukova, V. G. Gradetsky, I. L. Ermolov, M. M. Knyazkov, E. A. Semyonov and A. N. Sukhanov</i>	

Development of a lower extremity exoskeleton system for walking assistance while load carrying	35
<i>W. S. Kim, H. D. Lee, D. H. Lim, C. S. Han and J. S. Han</i>	
Dynamic coupling characteristics of a semi-active knee prosthesis.....	43
<i>M. Awad, A. Dehghani, D. Moser and S. Zahedi</i>	
Covered area detection based on brightness change of inner camera images for crawler robot.....	51
<i>K. Tokuda, T. Hirayama, T. Kinugasa, T. Haji and H. Amano</i>	
Actuator with adjustable-rigidity and embedded sensor for an active orthosis knee joint	59
<i>M. Cestari, D. Sanz-Merodio, J. C. Arevalo, X. Carrillo and E. Garcia</i>	
A personal robot integrating a physically-based human motion tracking and analysis	68
<i>C. Granata, Ph. Bidaud, R. Ady and J. Salini</i>	
Humanoid robot programming through face expressions.....	77
<i>A. Uribe-Quevedo, H. Leon and B. Perez-Gutierrez</i>	
Dynamics of human lower limbs using CGA data and BSIP predictive equations	85
<i>A. B. Filho, V. H. Fernandes, A. H. Maia, E. Garcia, A. Frizera and T. Bastos</i>	
Variable impedance control of a parallel robot for ankle rehabilitation	93
<i>S. Q. Xie and Y. H. Tsoi</i>	
A mobile 3D vision-based embedded system for robust estimation and analysis of human locomotion.....	101
<i>C. Zong, Ph. Bidaud and X. Clady</i>	
A simple load estimation of a patient during a standing assistance motion	109
<i>T. Yamada, D. Chugo, S. Yokota and H. Hashimoto</i>	
Exoskeleton for assisting human walking	117
<i>I. N. Indrawibawa and G. S. Virk</i>	
Hopping machine: A tool for human running simulation and for legged robots and exoskeleton design.....	125
<i>A. H. Maia, S. Laquini Jr, A. B. Filho, V. H. B. Fernandes and E. Garcia</i>	

Design of a reconfigurable wheelchair with a sit-to-stand facility for a disabled kid.....	133
<i>K. M. Goher, M. Shafiq and A. Al-Yahmadi</i>	
Integrated design, modelling and analysis of two-wheeled wheelchair for disabled	141
<i>A. Aula, T. M. Altalmas, S. Ahmad, R. Akmeliaawati, S. N. Sidek and M. O. Tokhi</i>	
A comparison of a passive and variable-damping controlled leg prosthesis in a simulated environment	153
<i>J. Zhao, K. Berns, R. D. S. Baptista and A. P. L. Bó</i>	

Section–3: Autonomous robots

DODEKAPOD as universal intelligent structure for adaptive parallel spatial self-moving modular robots	163
<i>S. Sayapin, A. Karpenko and D. X. Hiep</i>	
Aquatic multi-robot system for lake cleaning	171
<i>P. Agrawal and B. Bhattacharya</i>	
Hybrid spiral dynamic bacterial chemotaxis optimisation for hybrid fuzzy logic control of a novel two wheeled robotic vehicle	179
<i>A. M. Almeshal, K. M. Goher, A. N. K. Nasir, M. O. Tokhi and S. A. Agouri</i>	
BFA optimisation of control parameters of a new structure two wheeled robot on inclined surface	189
<i>S. A. Agouri, M. O. Tokhi, A. M. Almeshal and K. M. Goher</i>	

Section–4: Biologically-inspired systems and solutions

Compliant backbone in mobile robots.....	199
<i>N. I. Kern, R. J. Bachmann, R. J. Michols, R. J. Triolo and R. D. Quinn</i>	
Development of two types of maintenance robots for a jacket inside a mixing tank	207
<i>T. Tanaka, T. Nakamura, D. Sannohe, Y. Morisita and M. Tanaka</i>	
Adaptive control of leg position for hexapod robot based on somatosensory feedback and organic computing principles.....	215
<i>A. Al-Homsy, J. Hartmann and E. Maehle</i>	

Implementation of an adjustable compliant knee joint in a lower-limb exoskeleton	223
<i>D. Sanz-Merodio, M. Cestari, J. C. Arevalo and E. Garcia</i>	
New propulsion system with pneumatic artificial muscles	232
<i>I. Veneva</i>	
Development of a wall climbing robot using the mobile mechanism of traveling waves propagation	241
<i>Y. Mizota, K. Takahashi, Y. Goto and T. Nakamura</i>	
Bio-inspired elbow impedance modulation using a compliant technical joint drive	249
<i>S. Annunziata, J. Paskarbeit and A. Schneider</i>	
A resilient robotic actuator based on an integrated sensorized elastomer coupling.....	257
<i>J. Paskarbeit, S. Annunziata and A. Schneider</i>	
Derivation of mathematical models of the peristaltic crawling robot for maintenance of a mixing tank	265
<i>Y. Morishita, D. Sannohe, T. Osawa, T. Tanaka and T. Nakamura</i>	
Improvement of energy consumption by movement of center of rotation of joint	273
<i>K. Tanaka, S. Nishikawa and Y. Kuniyoshi</i>	
A simplified variable admittance controller based on a virtual agonist-antagonist mechanism for robot joint control	281
<i>X. Xiong, F. Wörgötter and P. Manoonpong</i>	

Section-5: HMI, inspection and learning

Determination of trajectories using non-invasive BCI techniques in 3D environments	291
<i>T. Garcia-Egea, C. A. Díaz-Hernández, J. Lopez-Coronado and J. L. Contreras-Vidal</i>	
Development of a peristaltic crawling inspection robot with pneumatic artificial muscles for a 25A elbow pipe.....	301
<i>T. Kishi, T. Nakamura and M. Ikeuchi</i>
