List of Contributors

Numbers in parentheses indicate the pages on which the authors' contributions begin.

- William A. Campbell (355), Institute of Government, University of North Carolina, Chapel Hill, North Carolina
- Noel H. de Nevers (3), Department of Chemical Engineering, University of Utah, Salt Lake City, Utah
- Milton S. Heath, Jr. (355), Institute of Government, University of North Carolina, Chapel Hill, North Carolina
- Edward W. McHugh (209), Bay Area Air Pollution Control District, San Francisco, California
- John A. Maga (505), Sacramento, California
- Robert E. Neligan (3), Environmental Protection Agency, Monitoring and Data Analysis Division, Research Triangle Park, North Carolina
- Vaun A. Newill (445), Medical Department, Exxon Corporation, Linden, New Jersey
- Goran Persson (381), National Swedish Environment Protection Board, Solna, Sweden
- P. W. Purdom (415), Environmental Studies Institute, Drexel University, Philadelphia, Pennsylvania
- August T. Rossano (247), Department of Civil Engineering, University of Washington, Seattle, Washington
- Jean J. Schueneman (109), Control Programs Development Division, U. S. Environmental Protection Agency, Research Triangle Park, North Carolina
- Herschel H. Slater (3), Environmental Protection Agency, Monitoring and Data Analysis Division, Research Triangle Park, North Carolina
- Arthur C. Stern (571), Department of Environmental Sciences and Engineering, School of Public Health, University of North Carolina, Chapel Hill, North Carolina

- Darryl D. Tyler (67), Office of Air Quality Planning and Standards,
United States Environmental Protection Agency, Research Triangle
Park, North Carolina
- Ronald A. Venezia (41), Cary, North Carolina
- William A. Vogely (293), Department of Mineral Economics, The Penn-
sylvania State University, University Park, Pennsylvania

Preface

This third edition is addressed to the same audience as the previous ones: engineers, chemists, physicists, physicians, meteorologists, lawyers, economists, sociologists, agronomists, and toxicologists. It is concerned, as were the first two editions, with the cause, effect, transport, measurement, and control of air pollution.

So much new material has become available since the completion of the three-volume second edition that it has been necessary to use five volumes for this one. Volumes I through V were prepared simultaneously, and the total work was divided into five volumes to make it easier for the reader to use. Individual volumes can be used independently of the other volumes as a text or reference on the aspects of the subject covered therein.

Volume I covers two major areas: the nature of air pollution and the mechanism of its dispersal by meteorological factors and from stacks. Volume II covers the effect of air pollution on plants, animals, humans, materials, and the atmosphere. Volume III covers the sampling, analysis, measurement, and monitoring of air pollution. Volume IV covers two major areas: the emissions to the atmosphere from the principal air pollution sources and the control techniques and equipment used to minimize these emissions. Volume V covers the applicable laws, regulations, and standards; the administrative and organizational strategies and procedures used to administer them; and the energy and economic ramifications of air pollution control. The concluding chapter of Volume II discusses air pollution literature sources and gives guidance in locating information not to be found in these volumes.

To improve subject area coverage, the number of chapters was increased from 54 of the second edition (and 42 of the first edition) to 71. The scope of some of the chapters, whose subject areas were carried over from the second edition, has been changed. Every contributor to the

second edition was offered the opportunity to prepare for this edition either a revision of his chapter in the second edition or a new chapter if the scope of his work had changed. Since 8 authors declined this offer and one was deceased, this edition includes 53 of the contributors to the second edition and 46 new ones.

The new chapters in this edition are concerned chiefly with aspects of air quality management such as data handling, emission inventory, mathematical modeling, and control strategy analysis; global pollution and its monitoring; and more detailed attention to pollution from automobiles and incinerators. The second edition chapter on Air Pollution Standards has been split into separate chapters on Air Quality Standards, Emission Standards for Stationary Sources, and Emission Standards for Mobile Sources. Even with the inclusion in this edition of the air pollution problems of additional industrial processes, many are still not covered in detail. It is hoped that the general principles discussed in Volume IV will help the reader faced with problems in industries not specifically covered.

Because I planned and edited these volumes, the gap areas and instances of repetition are my responsibility and not the authors'. As in the two previous editions, the contributors were asked to write for a scientifically advanced reader, and all were given the opportunity of last minute updating of their material.

As editor of this multiauthor treatise, I thank each author for both his contribution and his patience, and each author's family, including my own, for their forbearance and help. Special thanks are due my secretary, Susan Bigham, and her predecessors, who carried ninety-nine times the burden of the other authors' secretaries combined, and Eleanor G. Rollins for preparing the Subject Index for this volume. I should also like to thank the University of North Carolina for permitting my participation.

Arthur C. Stern

Contents of Other Volumes

VOLUME 1 AIR POLLUTANTS, THEIR TRANSFORMATION AND TRANSPORT

Part A The Pollutants

- 1 Classification and Extent of Air Pollution Problems
Leslie A. Chambers
- 2 The Primary Air Pollutants—Gaseous
Their Occurrence, Sources, and Effects
Paul Urone
- 3 Aerosols and the Primary Air Pollutants—Nonviable Particles
Their Occurrence, Properties, and Effects
Morton Corn
- 4 The Primary Air Pollutants—Viable Particulates
Their Occurrence, Sources, and Effects
Alvin R. Jacobson and Samuel C. Morris
- 5 The Primary Air Pollutants—Radioactive
Their Occurrence, Sources, and Effects
Merril Eisenbud

Part B The Transformation of Air Pollutants

- 6 Atmospheric Reactions and Scavenging Processes
A. J. Haagen-Smit and Lowell G. Wayne
- 7 Global Sources, Sinks, and Transport of Air Pollution
D. M. Whelpdale and R. E. Munn

Part C The Transport of Air Pollutants

- 8 The Meteorological Setting for Dispersal of Air Pollutants
Raymond C. Wanta and William P. Lowry
- 9 Transport and Diffusion of Stack Effluents
Gordon H. Strom

- 10 Urban Air Quality Simulation Modeling
Warren B. Johnson, Ralph C. Sklarew, and D. Bruce Turner
- 11 Meteorological Measurements
E. Wendell Hewson
- 12 Air Pollution Climatology
Robert A. McCormick and George C. Holzworth

VOLUME II THE EFFECTS OF AIR POLLUTION

Part A Effects on Physical and Economic Systems

- 1 Effects on the Physical Properties of the Atmosphere
Elmer Robinson
- 2 Effects on Economic Materials and Structures
John E. Yocom and James B. Upham
- 3 Effects on Indoor Air Quality
John E. Yocom, William A. Colé, and Ferris B. Benson

Part B Effects on Biological Systems

- 4 Effects on Vegetation: Native, Crops, Forests
Walter W. Heck and C. Stafford Brandt
- 5 Biological Effects of Air Pollutants
David L. Coffin and Herbert E. Stokinger
- 6 Organic Particulate Pollutants—Chemical Analysis
and Bioassay for Carcinogenicity
Dietrich Hoffmann and Ernst L. Wynder
- 7 Effects of Air Pollution on Human Health
John R. Goldsmith and Lars T. Friberg

Part C Air Pollution Literature Resources

- 8 Literature Resources
Peter Halpin

VOLUME III MEASURING, MONITORING, AND SURVEILLANCE OF AIR POLLUTION

Part A Sampling and Analysis

- 1 Particulate Matter Sampling and Sizing
Paul M. Giever
- 2 Analysis of Inorganic Particulates
Philip W. West

- 3 Microscopy and Pollution Analysis
Walter C. McCrone
- 4 Sampling and Calibration of Gaseous Pollutants
Herman D. Axelrod and James P. Lodge, Jr.
- 5 Hydrocarbons and Carbon Oxides
Aubrey Paul Altschuller
- 6 Sulfur Compounds
Donald F. Adams
- 7 Nitrogen Compounds and Oxidants
Morris Katz
- 8 Odors
Austin H. Phelps

Part B Ambient Air Surveillance

- 9 Ambient Air Quality Surveillance
Robert J. Bryan
- 10 Air Pollution Effects Surveillance
Charles W. Gruber and George Jutze
- 11 Radionuclide Surveillance
Harry F. Schulte
- 12 Air Quality Data Handling and Analysis
Charles E. Zimmer
- 13 Global Monitoring and Surveillance of Air Pollution
Richard D. Cadle

Part C Source Surveillance

- 14 Stack Sampling
Harold J. Paulus and Raymond W. Thron
- 15 Source Monitoring
John S. Nader
- 16 Measurement, Testing, and Surveillance of Air Pollution
from Mobile Sources
William F. Biller and John Harkins
- 17 Emission Inventory
James R. Hammerle

VOLUME IV ENGINEERING CONTROL OF AIR POLLUTION

Part A Control Concepts

- 1 Control of Systems, Processes, and Operations
Melvin W. First

Part B Control Devices

- 2 Selection, Evaluation, and Application of Control Devices
Paul W. Spaite and John O. Burckle
- 3 Source Control by Centrifugal Force and Gravity
Knowlton J. Caplan
- 4 Filtration
Koichi Inoya and Clyde Orr, Jr.
5. Electrostatic Precipitation
Sabert Oglesby, Jr., and Grady B. Nichols
- 6 Scrubbing
Seymour Calvert
- 7 Mist Elimination
Werner Strauss
- 8 Adsorption
Amos Turk
- 9 Combustion
Chad F. Gottschlich

Part C Process Emissions and Their Control

- 10 Fuels and Their Utilization
Richard B. Engdahl and Richard E. Barrett
- 11 Space Heating and Steam Generation
R. E. Barrett, R. B. Engdahl, and D. W. Locklin
- 12 Power Generation
F. E. Gartrell
- 13 Incineration
Richard C. Corey
- 14 The Control of Motor Vehicle Emissions
Donel R. Olson
- 15 Agriculture and Agricultural-Products Processing
W. L. Faith
- 16 The Forest Products Industry
E. R. Hendrickson
- 17 Mineral Product Industries
Victor H. Sussman
- 18 Chemical Industries
Stanley T. Cuffe, Robert T. Walsh, and Leslie B. Evans

19 Petroleum Refining

Harold F. Elkin

20 Nonferrous Metallurgical Operations

Kenneth W. Nelson, Michael O. Varner, and Thomas J. Smith

21 Ferrous Metallurgical Operations

Bruce A. Steiner

Contents

<i>List of Contributors</i>	x1

<i>Contents of Other Volumes</i>	xv

Part A Local, State, and Regional

1. Air Quality Management, Pollution Control Strategies, Modeling, and Evaluation

Noel H. de Nevers, Robert E. Neligan, and
Herschel H. Slater

I. Air Pollution Strategies and Tactics	4
II. Air Quality Management	10
III. Emission Standard Strategies	26
IV. Emission-Tax Strategies	29
V. Cost-Benefit Strategies	30
VI. Other Strategies	31
VII. The Strategies Compared	32
VIII. Integration of Air Pollution Control Strategies into Overall Environmental Management	37
IX. Future of Air Quality Management, Pollution Control Strategies, Modeling, and Evaluation	37
References	38

2. Land Use and Transportation Planning

Ronald A. Venezia

I. Introduction	41
II. Transportation Planning for Air Pollution Control	43
III. Land-Use Planning for Air Pollution Control	57
References	65

3. Episode Control Planning

Darryl D. Tyler

I. Introduction	67
II. Planning for the Atmospherically Induced Episode	69
III. Planning for the Single-Source Episode	92
IV. Planning for the Accidental Episode	96
References	107

4. Organization and Operation of Air Pollution Control Agencies

Jean J. Schueneman

I. Philosophy of Air Pollution Control	110
II. Governmental Air Pollution Control Programs in the United States	114
III. Role of Various Levels of Government in Air Pollution Control	140
IV. Air Pollution Control Program Elements	154
References	202

5. Public Information and Educational Activities

Edward W. McHugh

I. Public Relations, Public Information, and Public Education	210
II. Basic Information Programs—Response and Dissemination	224
III. Active Information Program—Outgoing Solicitation	233
References	245

6. Air Pollution Surveys

August T. Rossano

I. Scope and Objectives of Air Pollution Surveys	247
II. Survey Types	248
III. The Comprehensive Air Pollution Survey	259
IV. Air Resource Management Plan	282
V. Summary	283
References	283

Part B National and Worldwide

7. Energy and Resources Planning—National and Worldwide

William A. Vogely

I. Introduction	294
II. Minerals and the World Economy	294

III. Resource Availability	325
IV. Resource Demand	336
V. Resource Adequacy	346
References	352

8. Air Pollution Legislation and Regulations

William A. Campbell and Milton S. Heath, Jr.

I. Common-Law Remedies	355
II. Legislation	360
III. The United States Clean Air Act	367
IV. Air Pollution Legislation Worldwide	374
References	377

9. Organization and Operation of National Air Pollution Control Programs

Goran Persson

I. Introduction	381
II. Approaches to Legislation	382
III. Elements of National Air Pollution Control Programs	383
IV. Organizational and Institutional Arrangements	389
V. Balance between Central Control and Decentralized Functions	396
