CURRENT OCULAR THERAPY

NOTICE

Extraordinary efforts have been made by the authors, the editors, and the publisher of this book to insure that dosage recommendations are precise and in agreement with standards officially accepted at the time of publication.

It does happen, however, that dosage schedules are changed from time to time in the light of accumulating clinical experience and continuing laboratory studies. This is most likely to occur in the case of recently introduced products.

It is urged, therefore, that you check the manufacturer's recommendations for dosage, *especially if the drug to be administered or prescribed is one that you use only infrequently or have not used for some time.*
