Magnesium Alloys as Degradable Biomaterials

Preface

Biodegradable metals (BMs) are metals expected to corrode gradually *in vivo*, with an appropriate host response elicited by released corrosion products, then dissolve completely upon fulfilling the mission to assist with tissue healing with no implant residues (Zheng 2013). As the main force of the BM family, Mg and its alloys have been widely studied as potential biomaterials and have attracted the attention of biomaterial scientists and medical device societies. Up to the present, a full chain from material selection and properties optimization of Mg alloys, processing into semiproducts and surface treatment, device design, and manufacturing of the final devices to animal testing and clinical trials of the final Mg alloy implants have been conducted. Various medical device prototypes have been designed, including cardiovascular stents, bone staples, ACL screws, nonvascular stents, and clips, and some of them have been clinically trialed in Europe, China, and South Korea. One kind of Mg alloy device is now available on the European market as an implant for commercial sales. Every year since 2009, an international symposium on biodegradable metals for biomedical applications (<http://www.biodegradablemetals.org/>) has been held, and, moreover, scientific journals and patent databases have recorded a high increase in publications in this area.

The research on biodegradable Mg alloys designed as degradable metallic biomaterials has been mature, and this book aims to provide a comprehensive description of magnesium and its alloys designed as biodegradable metallic implant materials. The basic concepts of biodegradation mechanisms of Mg and its alloys, the strategy to control their biodegradation mode and rate, microstructure, mechanical property, corrosion resistance to body fluids, and *in vitro* and *in vivo* biocompatibility are introduced. Then various types of new biomedical Mg alloy systems will be enumerated with their special properties illustrated. Finally, the medical devices of biomedical Mg alloys will be designed and analyzed with numerical calculation and animal trials. The book provides a wealth of updated research information for graduate students, teachers, and research workers in the fields of materials science, biomedical engineering, and clinical medicine and dentistry and also for professionals involved in implantable medical device design and manufacturing.

I would like to thank colleagues working in the field of biodegradable metals all over the world and especially the majority of the attendants at the international symposiums on biodegradable metals from 2009 to the present. As a co-chair with Prof. Diego Mantovani, Prof. Frank Witte, and Prof. Mark Staiger, I get together with 120–150 scholars during the last week of August every year, sharing the research progress on biomedical Mg alloys with topics on new material fabrication, biodegradation, *in vitro* and *in vivo* testing, device design, and clinical trials, with a panel discussion on proposing international standardization on the materials and device evaluations. I get a lot of inspiration through listening and discussing with scholars from all over the world during the conferences.

Special thanks must given to my students at the Laboratory of Biomedical Materials and Devices, Department of Materials Science and Engineering, College

of Engineering, Peking University (<http://lbmd.coe.pku.edu.cn/>) for helping me on the manuscript preparation, typing, and copyright licensing transaction. They are Yang Liu (Chapters 1, 4, and 9), Nan Li (Chapters 2, 12, and 14), Dong Bian (Chapters 5, 10, and 11), Yuanhao Wu (Chapters 6, 7, and 8), Zhen Zhen (Chapter 3), Xiaochen Zhou (Chapter 13), Meng Zhou (Chapter 2), and Weirui Zhou (Chapters 5 and 10). I am very grateful to the funding bodies including the National Basic Research Program of China (973 Program; Grant No. 2012CB619102), the National Science Fund for Distinguished Young Scholars (Grant No. 51225101), the National Natural Science Foundation of China (Grant No. 51431002 and 31170909), the NSFC/RGC Joint Research Scheme under Grant No. 51361165101, the Beijing Municipal Science and Technology Project (Z131100005213002), and the State Key Laboratory for Mechanical Behavior of Materials (Grant No. 20141615).

Author

Dr. Yufeng Zheng earned his PhD in materials science from the Harbin Institute of Technology, China, in 1998. From 1998 to 2004, he was assistant professor (1998–2000), associate professor (2000–2003), and full professor (2003–2004) at the Harbin Institute of Technology, China, and since 2004, he has been a full professor at Peking University in Beijing, China.

Dr. Zheng has authored or co-authored more than 300 scientific peer-reviewed articles, has been cited more than 5800 times, and has an H-index of 37. He served as a member of the editorial board of the *Journal of Biomedical Materials Research-Part B: Applied Biomaterials* (Wiley), *Journal of Biomaterials and Tissue Engineering* (American Scientific Publishers), *Materials Letters* (Elsevier), *Intermetallics* (Elsevier), *Journal of Materials Science & Technology* (Elsevier), *Frontiers of Materials Science* (Springer), *Acta Metallurgica Sinica (English Letters)* (Springer), and *Journal of Orthopaedic Translation* (Elsevier). His areas of special interest include the development of various new biomedical metallic materials (beta-Ti alloys with low elastic modulus, biodegradable Mg alloys and Fe alloys, bulk metallic glass, bulk nanocrystalline materials, etc.). Dr. Zheng has received several awards, including New Century Excellent Talents in University awarded by the Ministry of Education of China (2007) and Distinguished Young Scholars awarded by the Natural Science Foundation of China (2012).

Contents

Preface.....xix

Authorxxi

Chapter 1 Introduction 1

 1.1 Property and Function of Element Mg 1

 1.2 History of Mg and Its Alloys for Biomedical Applications 2

 1.2.1 Before 2000 2

 1.2.2 After 2000 2

 1.3 Design of Mg and Its Alloys for Biomedical Applications 6

 1.3.1 Selection of Alloying Elements to Mg for Better Performance 6

 1.3.1.1 Calcium.....6

 1.3.1.2 Zinc 8

 1.3.1.3 Strontium 8

 1.3.1.4 Silver 8

 1.3.1.5 Lithium 8

 1.3.1.6 Rare Earth Elements..... 9

 1.4 Comparison with Other Biomaterials..... 9

 1.4.1 Comparison with Bioinert Metallic Materials 9

 1.4.2 Comparison with Biodegradable Ceramics and Polymers 11

 1.4.2.1 Biodegradable Ceramics 11

 1.4.2.2 Biodegradable Polymers 11

 1.4.2.3 Comparison..... 11

 1.4.3 Comparison with Other Biodegradable Metals..... 13

 1.4.3.1 General Introduction to Biodegradable Metals 13

 1.4.3.2 Degradation Mechanism..... 15

 1.5 General Analytical Methods for Biodegradable Mg and Its Alloys 16

 1.5.1 Chemical and Microstructural Characterization 17

 1.5.1.1 Metallographic Observation and Scanning Electron Microscope (SEM) Observation 17

 1.5.1.2 X-Ray Diffraction (XRD) Characterization 17

 1.5.2 Mechanical Property 17

 1.5.2.1 Tension 18

 1.5.2.2 Three-Point Bending 18

 1.5.2.3 Wear 18

 1.5.2.4 Fatigue 19

1.5.3	Biodegradation Behavior and Ion Release	20
1.5.3.1	Corrosion Medium Selection	20
1.5.3.2	Electrochemical Measurement	20
1.5.3.3	Immersion Test	24
1.5.3.4	Hydrogen Evolution Test.....	25
1.5.4	Cytotoxicity (Extract Preparation)	25
1.5.4.1	Extract Preparation	26
1.5.4.2	Extract Concentration	28
1.5.4.3	Cell Lines or Primary Cells.....	28
1.5.4.4	Protein Effect.....	29
1.5.5	Hemocompatibility	29
1.5.6	Animal Testing.....	30
1.5.6.1	Bone Repair	30
1.5.6.2	Stent Application	32
Chapter 2	Biodegradation Mechanism and Influencing Factors of Mg and Its Alloys.....	37
2.1	Biodegradation Mechanism of Pure Mg in the Physiological Environment.....	37
2.2	Influence of Alloying Elements and Impurities on the Biodegradation of Mg and Its Alloys	40
2.3	Degradation Mode and Rate of Mg and Its Alloys in the Physiological Environment.....	42
2.3.1	Modes of Corrosion.....	42
2.3.1.1	Galvanic Corrosion.....	42
2.3.1.2	Localized Corrosion	42
2.3.1.3	Fretting Corrosion.....	44
2.3.1.4	Stress Corrosion Cracking.....	44
2.3.1.5	Corrosion Fatigue	45
2.3.2	In Vitro and In Vivo Degradation Rate.....	46
2.4	Influence of Environmental Variables on the Biodegradation of Mg and Its Alloys	49
2.4.1	Temperature.....	50
2.4.2	Chemical Composition of Corrosion Media	50
2.4.2.1	Inorganic Ions	50
2.4.2.2	Buffer	52
2.4.2.3	Amino Acid and Proteins	52
2.4.3	Solution Volume and Flow	53
2.5	Biological Effects of Degradation Products	55
2.5.1	Biological Effects of Mg and Its Alloying Elements ...	56
2.5.2	Biological Effect of Hydrogen.....	62
2.5.3	Biological Effects of OH ⁻	67
2.6	Concluding Remarks	67

Chapter 3 Novel Structure Design for Biodegradable Mg and Its Alloys..... 69

3.1 Introduction 69

3.2 Porous Structure 70

3.3 Composites 74

3.3.1 Calcium Phosphate Salts 74

3.3.2 Bioglasses 78

3.3.3 Metals 79

3.3.4 Others 79

3.4 Ultrafine-Grained Structure 80

3.5 Glassy Structure 83

3.6 Concluding Remarks 85

Chapter 4 Surface Modification Techniques for Biodegradable Mg and Its Alloys..... 87

4.1 Introduction 87

4.2 Mechanical Surface Treatment..... 88

4.3 Physical Surface Treatment 91

4.3.1 Plasma Surface Treatment..... 92

4.3.1.1 Low Temperature/Pressure Plasma Surface Treatment..... 92

4.3.1.2 Plasma Spray..... 99

4.3.2 Laser Surface Treatment 101

4.3.2.1 Laser Polishing and Roughening 101

4.3.2.2 Laser Surface Melting 103

4.3.2.3 Laser Surface Cladding 103

4.4 Chemical Surface Treatment 104

4.4.1 Chemical Conversion Coating..... 104

4.4.1.1 Fluoride Conversion Coating..... 104

4.4.1.2 Alkali Treatment..... 107

4.4.1.3 Hydrothermal Treatment 109

4.4.2 Electrochemical Treatment 113

4.4.2.1 Anodic Oxidation and Micro-Arc Oxidation 113

4.4.2.2 Electrodeposition 121

4.4.2.3 Electrophoretic Deposition 124

4.4.3 Biomimetic Deposition..... 124

4.4.4 Sol-Gel Treatment 129

4.4.5 Organic and Polymer Coating 132

4.4.6 Molecular Self-Assembled Coating..... 136

4.5 Concluding Remarks 141

4.5.1 Coating Roughness..... 141

4.5.2 Adhesion..... 141

4.5.3 Long-Term Corrosion Behavior..... 141

4.5.4 Biocompatibility 142

Chapter 5	Mg with High Purity for Biomedical Applications.....	143
5.1	Introduction	143
5.1.1	Commercial Pure Mg (CP-Mg)	143
5.1.2	High-Purity Mg (HP-Mg)	144
5.1.3	Previous Studies on Pure Mg for Industrial/ Engineering Applications.....	145
5.2	Development of Pure Mg as Degradable Metallic Biomaterial	147
5.2.1	Impurities	148
5.2.1.1	Fe	148
5.2.1.2	Ni	149
5.2.1.3	Cu.....	149
5.2.1.4	Co.....	150
5.2.2	Fabrication, Hot and Cold Working, and Heat Treatment.....	150
5.2.3	Microstructure and Mechanical Properties.....	152
5.2.4	Degradation in Simulated Body Fluids.....	153
5.2.5	Cytotoxicity	159
5.2.6	Hemocompatibility.....	161
5.2.7	Antibacterial Properties	161
5.2.8	In Vivo Performance in Animal Models.....	162
5.3	New Advances in Property Improvements on Pure Mg for Medical Purposes.....	163
5.3.1	New Techniques for Enhancing Mechanical Properties	163
5.3.2	New Methods for Enhancing Corrosion Resistance	165
5.3.3	New Ways for Enhancing Biocompatibility	168
5.4	Concluding Remarks	170
Chapter 6	Mg-Ca-Based Alloy Systems for Biomedical Applications.....	173
6.1	Introduction	173
6.1.1	Calcium	173
6.1.2	Previous Studies on Mg-Ca Alloy Systems for Engineering Applications	173
6.2	Development of Mg-Ca Binary Alloys as Degradable Metallic Biomaterials	174
6.2.1	Alloy Composition Design	174
6.2.2	Fabrication, Hot and Cold Working, and Heat Treatment.....	174
6.2.2.1	Metallurgy Method	174
6.2.2.2	Powder Metallurgy Method	175
6.2.2.3	Hot and Cold Working.....	175

- 6.2.3 Microstructure and Mechanical Properties..... 175
 - 6.2.3.1 Microstructure 175
 - 6.2.3.2 Mechanical Properties 177
- 6.2.4 Degradation in Simulated Body Fluids 177
- 6.2.5 Cytotoxicity and Hemocompatibility 181
- 6.2.6 In Vivo Performance in Animal Models..... 181
- 6.3 Development of Mg–Ca–X Ternary Alloys as Degradable Metallic Biomaterials 185
 - 6.3.1 Alloy Composition Design 185
 - 6.3.2 Fabrication, Hot and Cold Working, and Heat Treatment..... 186
 - 6.3.2.1 Mg–Ca–Zn Alloys..... 186
 - 6.3.2.2 Mg–Ca–Zr Alloys 187
 - 6.3.2.3 Mg–Ca–Li Alloys..... 187
 - 6.3.2.4 Mg–Ca–Sr Alloys..... 187
 - 6.3.2.5 Other Ternary Mg–Ca–X Alloys..... 188
 - 6.3.3 Microstructure..... 188
 - 6.3.3.1 Mg–Ca–Zn Alloys..... 188
 - 6.3.3.2 Mg–Ca–Zr Alloys 189
 - 6.3.3.3 Mg–Ca–Li Alloys..... 190
 - 6.3.3.4 Mg–Ca–Sr Alloys..... 191
 - 6.3.3.5 Mg–Ca–Mn Alloys..... 191
 - 6.3.3.6 Mg–Ca–Sn Alloys 192
 - 6.3.3.7 Mg–Ca–Bi Alloys 193
 - 6.3.3.8 Mg–Ca–Si Alloys..... 193
 - 6.3.4 Mechanical Properties..... 193
 - 6.3.4.1 Mg–Ca–Zn Alloys..... 193
 - 6.3.4.2 Mg–Ca–Zr Alloys 196
 - 6.3.4.3 Mg–Ca–Li Alloys..... 196
 - 6.3.4.4 Mg–Ca–Si Alloys..... 196
 - 6.3.4.5 Mg–Ca–Sr Alloys..... 196
 - 6.3.4.6 Mg–Ca–Sn Alloys 197
 - 6.3.5 Degradation in Simulated Body Fluids 197
 - 6.3.6 Cytotoxicity and Hemocompatibility 201
 - 6.3.7 In Vivo Performance in Animal Models..... 201
- 6.4 Development of Mg–Ca Quaternary and Multielementary Alloys as Degradable Metallic Biomaterials..... 204
 - 6.4.1 Alloy Composition Design 204
 - 6.4.2 Fabrication, Hot and Cold Working, and Heat Treatment..... 204
 - 6.4.3 Microstructure and Mechanical Properties..... 204
 - 6.4.4 Degradation in Simulated Body Fluids 206
