内容提要

全图谱共辑采图100幅,其中先天性色觉检查图60幅,后天性色觉检查图40幅。组成的阿拉伯数字图、英文字册图、动物及其它物形图设计富有知识性、趣味性。科学性强、实用性强。图形均可清楚认读,有的还可颠倒认读或竖读。适合国内外各民族、各类人群使用。

《新编色觉检查图》集先天性色觉检查和后天性色觉检查于一节。不仅适合青年应征入伍,大学、中专招生,各行各业招工时之先天性色觉异常检查,而且还适合因患视神经病、视网膜脉络膜病、视中枢病、青光眼等所致色觉障碍的后天性色觉异常检查。

here are total 100 pieces of pictures. Among them, 60 are for the congenital color vision testing, 40 are for the acquired color vision testing. The figures of the digits, English letters,

animals and other objects formed with the spots or stripes are designed from the aspects of knowledge and interest, so they are strong in science and practice. All of the figures can be read clearly. Some pieces can be read up-side down and some can be read perpendiculurly. The CHART can be used by all kinds of people no matter who are Chinese or Foreigners.

The NEW COLOR VISION TESTING CHART assembles THE CONGENITAL COLOR VISION TESTING CHART and THE ACQUIRED COLOR VISION TESTING CHART. It not only suits the testing of the congenital color vision defects in conscripting soldiers, admitting students to the universities and the polytechnic schools and recruiting workers, but also satisfies the examination of the acquired color vision defects caused by some ophthalmopathy such as ophthalmoneuritis, retinochoroiditis, optic neuritis, glaucoma etc..

each person. It has obtained more and more attention from the people and the society. Most of the color vision testing charts published before are designed for examining out the congential color vision defects. They take an important part in helping people to select occupation, directing students to choose a higher school, recruiting, etc.. They have contributed greatly to our country in choosing, training and using talented person.

With the developing of ophthalmological clinic, some of the ophthalmopathy, such as optic neuritis, retinochoroiditis, glaucoma, etc., can cause not only the vision and visual fields defects, but also the color vision defects in different extent first. In order to integrate the color vision testing, after two years of internal acquired color vision testing, after two years of hard researching and designing, THE ACQUIRED COLOR VISION TESTING CHART was drawn. It plays an important role in judging some ophthalmopathy and comprehending the patient's

condition, further, predicting the possible changing of the patient's condition.

The NEW COLOR VISION TESTING CHART united the congenital and the acquired color vision testing charts. It can satisfy the examination of both kinds of color vision defects. As an ideal reference book, it will do new contribution for our country's ophthalmological color vision test.

NEW COLOR VISION TESTING CHART was drawn by vice director Dr. Chunhui Li. It was based on many years of his color vision research, diligent work and meticulous design. Congratulate his success sincerely!

Hope NEW COLOR VISION TESTING CHART can be welcomed by the reading public and ophthalmological colleague.

Management Bureau. As the achievement of scientific Management Bureau, Shenyang Municipal Hygienic Utility Management Bureau, Chaoyang Municipal Hygienic Utility Committee, Liaoning Provincial Hygienic Utility leader from Liaoning Provincial Scientific & Technological published on December, 1981 by Liaoning People Press. It existed in present China for about 12 years since it was from research, it received the encouragement and high praise was created under the concern and support of the relevant the he COLOR VISION TESTING CHART has been

> compiling and printing. It does a great contribution to author: "The CHART is excellent in all designing. Chinese ophthalmological color vision test." Ophthalmology Magzine and leader of ophthalmologist, Prof. Xiaolou Zhang, primary director from Ophthalmological Institute wrote in his letter to the Ophthalmologic Branch, general editor of Chinese committee member of Chinese Medical Institute institutes, armies and clinics of schools and universities colleagues. It was welcomed and trusted by the hospitals, all over China. Our deceased famous Beijing

ophthalmologists and ophthalmological color blindness people. Meanwhile, the figures which can normal people are distinct. They can not be read by the figures which can be read rapidly and correctly by the of knowledge and interest. In its di-structural pictures, the is strong both in scientific and practical features. In is full TESTING CHART in Chinese book market. The CHART 59 000. It becomes one of the best-seller COLOR VISION has been reprined 8 times. The total issue amount is Since it was first published 12 years ago, the CHART

CHART can be read through several methods, so it is difficult to recite them. the picture can be read by turning 90°. Most pieces of the Most of the digit pictures can be read upsidedown. Some of hidden. They are not easy to be read by the normal people. not be read quickly by the color vision blindness people are

member of Color Criterion Technological Committee of Hospital. This work obtained the care and support from the Color Vision Deficiency (I. R. G. C. V. D) in France, praised warmly. In 1985, on The Eighth General color vision defects , the author prepared to make THE come and test their color vision. The color blindness people Membership Meeting of International Research Group of ACQUIRED COLOR VISION TESTING CHART under were checked out correctly at once. This made the audience color vision testing, fill in the testing gaps of the acquired published on Liaoning Daily. This attracted many people to article named "The Wonderful Color Pictures", which newsman visited the author in the Fair and wrote a special Provincial Scientific & Technological Exchanging Fair in achievement, the CHART had been exhibited in Liaoning 1982. It received the journalist's enthusiastic publicity. The a significant scientific & technological introduced. The books were also distributed to the members of the meeting and won the experts'praise and attention.

paper, the CHART made by this book's author was Department of Zhejiang University gave a dissertation, doctorate and post doctorate of Optical Instruments International Life Science, Optical Branch and advisor of INTRODUCTION OF CHINESE DESIGNED COLOR National Technological Supervise Bureau, member of VISION TESTING CHART AND INSTRUMENT. In his

Taihuo Dong, Chinese famous optist, vice director China Medical University and The First Affiliated Clinical the directing of Prof. Jingtian Wu, advisor of doctorate of the vision and visual fields defects. In order to complete retinochoroiditis, glaucoma, optic neuritis, etc. can always the bring about color vision defects in different extent besides With the developing of ophthalmological clinic, some of ophthalmopathy, such as ophthalmoneuritis,

judgement of the patient's condition". "THE CHART is ophthalmopathy creating of THE ACQUIRED COLOR VISION TESTING organized relevant professors to appraise the achievement retinochoroiditis, optic neuritis, glaucoma, etc.) and the examination. It can contribute to the diagnosis of CHART is urgent in our country's ophthalmological CHART. The experts unanimously considered: "The of THE ACQUIRED COLOR VISION TESTING Shenyang Municipal Hygienic Utility Management Bureau clinical experiments. On December 1989, Shenyang Municipal Scientific & Technological Committee and base of both Japanese Prof. 市川宏 THE COLOR VISION COLOR VISION TESTING CHART was compiled on the two years of designing and drawing, THE ACQUIRED Hospital and Shenyang Ophthalmopathy Institute. After Management Bureau, The Fourth Shenyang People TESTING CHART and many years of accumulating Commitee, Shenyang Municipal Hygienic Utility (such as ophthalmoneuritis,

leaders of Shenyang Municipal Scientific & Technological reasonable in designing. It is strong in scientific feature, internal advanced level" excellent in drawing, valuable in practice. It has reached the

THE ACQUIRED COLOR VISION TESTING CHART was welcomed on 90' The Whole National Fair Of Medical & Hygienical Achievement and gained the 1991's Shenyang Municipal Scientfic & Technological Progress Prize.

In order to suit the developing of rapid socialist construction, select the people reasonably for national defence, colleges and universities, polytechnic schools or each other occupations, train and employ personnel rationally, service the people better, the author revised the first edition of the COLOR VISION TESTING CHART partly. Except this, THE ACQUIRED COLOR VISION TESTING CHART is added. The new edition is named NEW COLOR VISION TESTING CHART.

THE NEW COLOR VISION TESTING CHART assembles THE CONGENITAL COLOR VISION TESTING CHART and THE ACQUIRED COLOR

VISION TESTING CHART. It not only fits the examining of the congenital color vision defects, but also satisfies the examining of the acquired color vision defects. So it is more valuable in science and practice.

The section of THE ACQUIRED COLOR VISION TESTING CHART had received the warm encouragement and directions from Prof. Jingan Wu, vice director of the First Affiliated Hospital of Beijing Medical University; director doctor, head of The Ophthalmological Department of Beijing Tongren Hospital; Prof. Weiqing Xi, director of The Ophthalmological Department of The Ninth Affiliated People Hospital of The Second Shanghai Medical University. Gratitude must be given to them faithfully.

Because of the litimited ability, it is not easy to avoid weakness or fault. Wait the advice and criticism sincerely.
