作者简介

张露茜,女,1983年生,浙江瑞安人,现居杭州。浙江工商大学外国语学院英语专业讲师,博士。2005年获浙江师范大学英语专业学士学位,2006年获英国巴斯大学教育(英语语言教学)硕士学位,2012年获香港教育学院^①英语语言教育博士学位。主要讲授“基础英语”“英语阅读”“高级英语视听说”等课程。研究方向为英语教育、教育测量和话语分析。已在国内外学术期刊上发表论文十余篇,如在国外书籍出版社 Springer、国外高质量期刊 *Higher Education Quarterly* 与 *Educational Studies* 等上都曾发表论文。曾获研究生发表奖、优秀目标导师、优秀班主任、教学优胜奖等。多次参加国际会议。现主持和参与多项课题。

^① 香港教育学院已于2016年正式更名为“香港教育大学”。

内容简介

在全球化影响下,中国社会对英语教学投注了大量心力。过往研究曾发现,具有高交流意愿者能在二语学习中获得较好成绩。但是教学实践反映出的问题是,英语专业的很多学生似乎在英语课堂上对参加口语活动的积极性并不高。因此,本书的研究目的为,发现阻碍与支持中国英语专业学生课堂交流意愿的个人与语境因素。四个研究问题分别为:1. 哪些个人因素阻碍或支持英语专业学生课堂交流意愿? 2. 哪些语境因素阻碍或支持英语专业学生课堂交流意愿? 3. 所有影响因素是如何互动以影响英语专业学生英语课堂交流意愿的? 4. 哪些教学改革能促进英语专业学生在英语课堂中的交流意愿?

本书通过在个案中混合不同的研究方法,期望获得对复杂的教学环境与过程的丰富理解。研究一为发现学生的个人因素,使用了问卷调查的方式;研究二为调查语境因素,先进行教学资料的审阅分析,再到课堂观察,最后是教师采访;研究三为进一步挖掘学生对当前课堂语境因素的回馈,通过学生的叙事、刺激回想、半建构式访谈取得。研究意义即,为英语专业学生提供最大化交流意愿的教学建议。研究发现,高英语口语水平与低焦虑能促进英语专业学生的交流意愿。但是,Wen 与 Clément(2003)的中国学生课堂交流意愿概念模型中的其他因素阻碍英语专业学生的交流意愿。三个研究的发现最终构建成一个修改后的中国英语学习者课堂交流意愿金字塔模型。

Statement of Originality

I, Luxi, Zhang, hereby declare that I am the sole author of the book and the material presented in this book is my original work except those indicated in the acknowledgement. I further declare that I have followed the policies and regulations on academic honesty.

Abstract

Under the influence of globalization in China, enormous attention is being paid to English learning and teaching. Previous research suggests that higher willingness to communicate (WTC) can lead to better achievement in learning a second language. However, it seems that many Bachelor of English (BE) students in Chinese universities are not likely to be actively involved in speaking activities in their English classes. Thus, the purpose of this research is to investigate what personal and contextual factors hinder or assist BE students' WTC in English language classrooms in China. Four research questions are posed: (1) What personal factors hinder or enable individual BE students' spoken English in English classrooms? (2) What contextual factors hinder or assist the students' spoken English in English language classrooms? (3) How do these factors interact to influence WTC in English language classrooms? (4) What pedagogical changes can enhance BE students' WTC in English classrooms?

By mixing methods within a single site case study, it was expected that a rich understanding of the complexities of the pedagogical environment and process could be obtained. Questionnaires were used to survey student personal factors, then inspection of teaching documents and classroom

observations, followed by teacher interviews, were used to study the contextual factors of learning. Student narratives, stimulated recalls and semi-structured interviews were used to further elucidate student responses to contextual factors. The goal was to suggest pedagogical strategies that would maximize WTC in English language classrooms for all BE students in the case study site. It was found that both peaking English proficiency and low anxiety facilitated BE students' WTC. But other factors in Wen and Clément's (2003) Chinese WTC model hindered students' WTC. Finding of three studies suggested a modified three-dimensional Chinese L2 WTC pyramid model.

Keywords: WTC, Chinese culture, BE students, English language classrooms

Acknowledgements

I would not have completed this book without the guidance and support of many people. First, I am heartily thankful to my principal supervisor, Professor Bob Adamson, whose supervision, encouragement and support from the preliminary to the concluding level enabled me to develop an understanding of the subject.

I then wish to express my sincere gratitude to my associate supervisor, Associate Professor Dr. Elizabeth Walker for her expert advice.

I also owe my deepest gratitude to Associate Professor Gavin Brown in Auckland University, New Zealand. While he was teaching at the Hong Kong Institute of Education^①, I had learned a great deal about the quantitative research methods from him and he also co-supervised my thesis at the proposal stage. I would like to thank him for his later support and comments to the quantitative data analysis of the thesis.

Many thanks to the internal and external examiners; they spent their valuable time evaluating my thesis and provided useful comments.

^① The Hong Kong Institute of Education was entitled as The Education University of Hong Kong in 2016.

My grateful thanks go to both teachers and students in the case study site, for their support and cooperation to my research.

Great appreciation goes to my classmates and friends at the institute for sharing ideas and invaluable discussions. I also would like to thank staff in the graduate school for helpful faculty support to meet my thesis timeline.

Last but not least, I would like to thank my family, my parents, sister Jane and husband, for their love and unconditional support.

Preface

Bob Adamson

The Education University of Hong Kong

Speaking English is a challenge for many non-native speakers. The language has many awkward sounds, such as consonant clusters, to twist the tongue, and tricky stress and intonation patterns that convey different meanings.

Many English learning programmes in China offer courses in phonetics to assist students. Mastering the skills of producing spoken language takes time and effort. A few years ago, I found some wonderful textbooks produced by the People's Education Press for junior secondary school students in the early 1960s. Each passage in the textbooks that were published in 1961 had stress and intonation marks to help the students, while the syllabus (People's Education Press, 1963, in translation) for the next series of textbooks set out these aims in relation to speaking:

Junior Secondary Year 1

- Mastering the accurate pronunciation of single and double

syllabus words that conform to regular pronunciation patterns;
reading all lessons aloud and reciting the passages

- Speaking by imitating passages and using conventional conversation; understanding simple classroom language
- Acquiring about 600 words and a few idioms

Junior Secondary Year 2

- Reading aloud clearly and correctly; mastering stress and intonation of simple sentences; being able to recite about 80% of passages
- Asking and answering questions relating to the passages; understanding and responding to classroom language
- Acquiring another 600 words or so and a few idioms

Junior Secondary Year 3

- Reading the passages fluently with correct pronunciation and intonation; being able to recite about 70% of passages
- Answering questions relating to the passages; talking about familiar daily life topics; understanding the teacher's introduction to the passage; participating in conversations with the teacher about certain classroom activities
- Acquiring another 600 words or so and a few phrases

I cite these examples at length in order to demonstrate the enormous difficulties inherent in learning spoken English in China, particularly at a time when contact with foreigners was limited and technology was far less advanced than it is today. It took three years of study for students to become familiar with the phonetics and suprasegmental patterns of English, and to acquire

the ability to conduct simple, everyday conversations. Nowadays, the available technology and the opportunities for speaking English may have improved, but the personal challenges of producing English sounds have not become smaller.

The challenges are not limited to sound production. Like Chinese, the English language is also rich in culture, which is a double-edged sword for learners. The richness undoubtedly contributes to the beauty of the language, but the cultural content can be obscure. Some metaphors can puzzle learners in China. What does “You’re batting on a sticky wicket” mean? (This was feedback from a lecturer at a UK university to a foreign student. It actually means that the argument in the student’s essay was not very solid, but the student—who was unfamiliar with the game of cricket—found it very hard to understand.) Not surprisingly, learners of English hesitate to speak in public. It takes courage.

On my frequent visits to China, I am always impressed by the courageous people who talk to me in English. I find them in many walks of life—very young and very old, white-collar and blue-collar, urban and rural. English corners in public squares and parks are amazing phenomena, as people hold animated discussions about an array of subjects. Yet I am told by many people that English standards in China are very low and the teachers of English are poor in quality. I disagree. Standards are extremely high, considering the linguistic environment, and teachers are extremely good, considering the other demands on students’ learning.

Nevertheless, speaking out is definitely a challenge in a society that values face, harmony and self-effacement.

Classrooms, in particular, are highly pressured environments, and many teachers have remarked that their students seem to be “struck dumb” in English lessons. It is an area of student learning that has not been well understood in the past, but now Luxi’s research enlightens us. This excellent book investigates the willingness of Chinese students to communicate in English and pinpoints the reasons that facilitate or hinder the process. Armed with the important insights contained in this book, teachers and students will be able to work together so this generation and future generations of learners can overcome the challenges in becoming effective English speakers.

Table of Contents

List of Tables	1
List of Figures	1
Chapter 1 Introduction	1
1.1 Research problem	1
1.2 Research motive	3
1.3 Research aim and questions	4
1.4 Significance of the study	5
1.5 Outline of this book	6
Chapter 2 Chinese Context	8
2.1 English in China	8
2.1.1 Definitions of China English	13
2.1.2 The impacts of dialects and Putonghua on English	14
2.2 College English	17
2.3 Willingness to communicate (WTC)	19
2.4 Conclusion	22
Chapter 3 Literature Review	23
3.1 Establishment of WTC in L1	24
3.2 Establishment of WTC in L2	28

3.3	Development of L2 WTC studies and theories	31
3.3.1	Recent L2 WTC studies outside China	35
3.3.2	Recent L2 WTC studies in China	43
3.4	The Chinese WTC model	52
3.4.1	Factors in the Chinese WTC model	52
3.4.2	Challenged collectivistic outlook of the Chinese	63
3.5	Conclusion	64
Chapter 4	Methodology	66
4.1	Research design	66
4.2	The case study approach	70
4.3	Research setting and participants	72
4.4	Instruments	74
4.4.1	Questionnaires	74
4.4.2	Documents	78
4.4.3	Student narratives	81
4.4.4	Classroom observations	82
4.4.5	Stimulated recalls	84
4.4.6	Semi-structured interviews	85
4.5	Data analysis procedures	88
4.6	Ethical issues	91
Chapter 5	Pilot Studies	93
5.1	Pilot Study One	93
5.2	Pilot Study Two	95
5.2.1	Data screen	95
5.2.2	Exploratory factor analysis (EFA)	97

Chapter 6 Study One	105
6.1 Data screen	105
6.2 Findings	107
6.2.1 Confirmatory factor analysis (CFA)	108
6.2.2 Multi-group confirmatory factor analysis (MGCFA)	112
6.2.3 Structural equation modeling (SEM)	118
6.2.4 Multi-group structural equation modeling (MGSEM)	123
6.3 Discussion	130
6.3.1 Research Questions One—personal factors that facilitate or hinder BE students' WTC, and Three—interactions between personal and contextual factors	133
6.3.2 Research Question Four—pedagogical changes	138
6.4 Conclusion	140
Chapter 7 Study Two	142
7.1 Participant information in qualitative studies	142
7.2 Document analysis outcomes	144
7.3 Classroom observation findings	147
7.4 Teacher interview results	155
7.4.1 Teacher with weak classroom context	157
7.4.2 Teacher with supportive classroom context	160
7.5 Discussion	163
