#### X. Reading comprehension(阅读理解):(共15分)

In general people talk about two groups of colours: warm colours and cool colours. Scientists think that there are also two groups of people: people who prefer warm colours and people who prefer cool colours.

The warm colours are red, orange and yellow. Where there are warm colours and a lot of light, people usually want to be active. People think that red example is exciting sociable (善交际的) people, those who like to be with others like red. The cool colours are green, blue and purple. These colours unlike warm colours, are relaxing. Where there are cool colours, people are usually quiet. People who like to spend time alone often prefer blue.

Red may be exciting but one scientist says that time seems to pass more slow in a room with warm colours than in a room with cool colours. He suggested that a warm colour such as red or orange, is a good colour for a living room or a restaurant.

People who are relaxing or eating don't want time to pass quickly. Cool colours are better for offices or factories as the people who work there want time to pass quickly. Scientist don't know why people think some colours are warm and other colours are cool.

However, almost everyone agree that warm colours remind people of warm days and cool colours remind them of cool days. Because in the north the sun is low during winter, the sunlight appears quite blue. Because the sun higher during summer, the hot summer sunlight appears yellow.

In 1826, a Frenchman named Niepce needed pictures for his business. But he was not a good artist. So he invented a very simple camera (照相机). He put it in a window of his house and took a picture of his garden. That was the first photo.

The next important date in the history of photography (摄影术) was in 1837. That year, Daguerre, another Frenchman, took a picture of his reading room. He used a new kind of camera in a different way. In his picture you could see everything very clearly, even the smallest thing. This kind of photo was called a Daguerretype.

Soon, other people began to use Daguerre's way. Travellers brought back wonderful photos from all around the world. People took pictures of famous buildings, cities and mountains.

In about 1840, photography was developed. Then photographers could take pictures of people and moving things. That was not simple. The photographers had to carry a lot of film and other machines. But this did not stop them, for example, some in the United States worked so hard.

Mathew Brady was a famous American photographer. He took many pictures of great people. The pictures were unusual because they were very lifelike(栩栩如生的).

Photography also became one kind of art by the end of the 19th century. Some photos were not just copies of the real world. They showed and feelings, like other kinds of art.

My name is Betty. I'm a telephone operator, and I work for Universal Telephone Company. My job at UTC is an interesting one. I work five days a week, and my hours are from 9:00a.m. to 5:00p.m. I do a lot of things — I place long-distance calls for people. I answer questions and I help people in emergencies.

Today, for example, I had an interesting experience. At 11:00 this morning, I got a call from some man. I don't know who he was. He was very nervous and I could tell that he was upset or frightened about something. He told me his address and asked me to send an ambulance right away. I asked him if somebody was hurt, but he didn't answer my questions. He told me he needed a doctor right away, so I said I'd call an ambulance for him. But I still wanted to know what was wrong. Then he said, "My son is here! Our keys are gone!" I didn't understand that! Why would he need an ambulance just because he couldn't find his keys? Then I found out what the trouble was.
