### **Service Acquisition Organization**

Excerpt from *A Comparison of the Defense Acquisition Systems of France, Great Britain, Germany and the United States*

The Services—Army, Navy and Air Forces—are separate departments within DoD, required by statute to train, organize, and equip their respective military organizations. Thus, a significant responsibility of each Service is the acquisition of military equipment to meet the needs of warfighter. Closely allied with the structural division of responsibilities is the department's management philosophy. Since the creation of DoD, the philosophy has been to centralize policy-making at the OSD and Service headquarters level, with decentralized execution of programs at field level organizations. As seen above, OSD is primarily a policy-making organization, although it plays a key role in program management through PEO structure for Major Defense Acquisition Programs and in its oversight role through the Defense Acquisition Board (DAB).

All these Services have organized based upon OSD direction and congressional mandates. Each Service has a single, full-time Service Acquisition Executive (SAE), an "acquisition czar", at the Assistant Secretary level. The SAE has responsibility for making acquisition system within their respective department. Each of the Services has created a streamlined organization required by the 1989 Defense Management Review which includes the Program Manager (PM), the Program Executive

Officer (PEO), and the Service Acquisition Executive (SAE)—although each is managed slightly differently.

Within this basic structure, each of the services has organized to meet its management and mission needs. The Army and Air Force have Major Command, headed by four-star generals, which have acquisition and logistics responsibilities—Army Materiel Command and Air Force Materiel Command. These commands manage the personnel, resources and processes involved in acquisition and logistics support of the operational forces. The Navy eliminated its Materiel Command in the 1980s and has four subordinates Naval Systems Command, two headed by three-star admirals, with responsibility for the acquisition of systems and providing logistics support to the fleet.

At the service headquarters level, each Service has established offices with responsibility for oversight and direction of the acquisition system, and for providing acquisition and contracting policy, and budget preparation. The role of information technology in weapon system development and management of information within the service is recognized by establishment of Chief Information Officers. In the Air Force the CIO is located within the acquisition organization; while in the Navy and Army it is in a separate organization, but works with the acquisition organization on common issues. The CIOs have responsibilities for information technology policies, procedures, standards, to include software policy and practices, and for the development, acquisition and fielding of information technology and systems within their service.

### **Army Organization of the United States**

#### **1. Active and Reserve Components.**

The United States Army is made up of two parts: active and reserve components. The active component consists of soldiers who are on full-time active duty. The reserve component consists of the Army National Guard and the Army Reserve. The reserve component receives military training and is ready to be called to active duty if necessary.

#### **2. Army Unit Organization.**

Army units can be organized several ways, but the following example is fairly typical:

The squad is the smallest unit, consisting of 8 to 10 soldiers. The squad leader is an NCO.

The platoon includes the platoon leader (2LT/1LT), platoon sergeant (SFC), and two or more squads.

The company is the smallest formation with both tactical and administrative capabilities; a company is commanded by a captain. The company includes the company commander (CPT), first sergeant (1 SG) a headquarters, and two or more platoons.

The battalion includes the battalion commander (LTC), his staff and headquarters, the command sergeant major (CSM) and approximately 3 – 5 companies.

The brigade includes the brigade commander (COL), command sergeant major, a headquarters, and approximately 3 – 6 battalions.

The division structure is the capstone element of our Army. It includes three maneuver (armor or infantry) brigades as well as several combat support and service support brigades or battalions. There are currently 10 active divisions, each command-

ded by a major general (two-stars).

Organizations higher than the division include the Corps, Army, Major Command (MACOM), and in times of war, the Theater. The field army, usually the highest army structure is usually composed of a headquarters and two or more corps. It is normally commanded by a four-star general.
