Message from the General Chair

Bharat Doshi

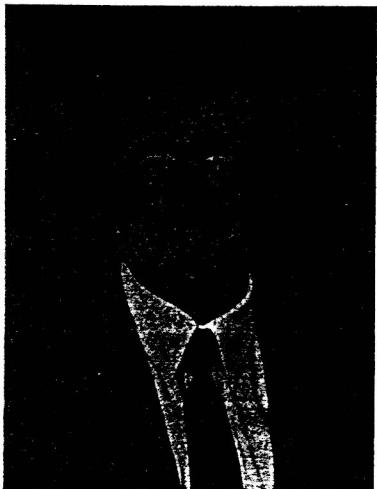

After many years of hype, the promise of true multi-service networks with any media, anywhere, and any time connectivity is on the verge of becoming a reality. Advances in photonics allow 400 Gbps on a single fiber strand in commercial products today and Tbps capacity is on the horizon. A single fiber optics cable can now bundle 432 fibers. Each such cable can carry the daily volume of the total wide area traffic in the whole world in 60 seconds! Similarly, advances in electronics permit switches and routers with capacities in the range of several hundred Gbps, and Tbps switches are approaching soon. New access technologies using copper loop, hybrid fiber-coax (HFC), hybrid fiber wireless, and fiber-to-the home (FTTH) are promising several hundred Kbps to Gbps access, thus relieving the curse of the 'last mile' for residential and small business users. Improvements in wireless technologies and capacities are nothing short of revolutionary. Of course, it is the intelligence of the humans that is exploiting these advances to bring new software, user interfaces, signal processing algorithms, protocols, and traffic controls to introduce exciting new services with ever decreasing cost and increasingly more user friendly access.

Over a billion users are connected to the global public telephone network. Starting from almost nothing in 1990, we have over 200 million cellular users and close to 100 million Internet hosts. And these numbers, especially for the last two, are growing at a phenomenal pace. Services once considered in the realm of science fiction are becoming common place and new ones are being introduced every day.

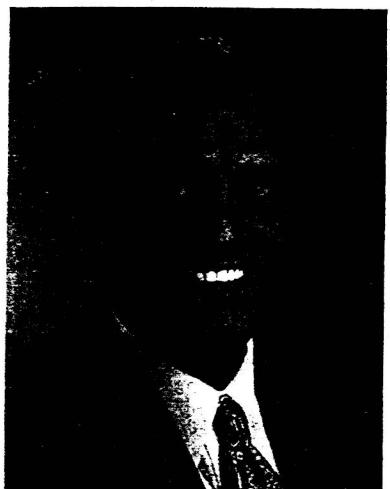

The future is certainly here. Of even greater importance, what is future today is becoming past in just a few months. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking, information retailing, entertainment, and publishing industries. If the reactions of the end users and financial community in the last two years are any guide, this excitement is shared by both.

With this backdrop, it is a pleasure to welcome you to INFOCOM'99 in Sheraton Hotel, New York City. For many years, INFOCOM has been a premier conference bringing state-of-the-art research and applications related to networking and information technologies to the academic and industrial audience. The 1999 version has a very exciting technical program consisting of 184 very high quality papers, 8 tutorials and 4 panels on exciting current topics, and a keynote talk reflecting the commercial success of packet networking and issues it is raising on pricing strategies. We could not have had a better venue. This financial capital of the world has not only welcomed the arrival of the networking future, it has also become a premier user community. Of course, New York City continues to offer great entertainment and dining. The conference hotel is within walking distance of Broadway shows, Rockefeller Center, and fine restaurants. The conference Web site (<http://www.comm.utoronto.ca/~infocom99/>) describes a myriad of exciting places to see and enjoy. Recent efforts have made this exciting city cleaner and safer. I hope you will extend your stay to enjoy both the conference and the city.

Message from the Technical Program Chairs

Anthony Ephremides

Satish Tripathi

We are proud to present to you the technical program of the IEEE INFOCOM'99. Of course, the main credit goes to the authors who contributed their work to the conference. They are the ones who set the standard of quality that INFOCOM enjoys. The technical program committee (which consisted of 71 members representing over 10 countries and drawn from academia, industry, and government) helped us go through 573 papers of which we selected 184 that were included in the final technical program. Collectively we are grateful to the several hundred reviewers who responded to our call for help and assisted with the evaluation of the papers.

The contributions to the conference came from 32 countries. In the final program 20 of these countries are represented. There is also a healthy mix of contributions from universities, industry, and government laboratories.

We selected as the "theme" of this year's INFOCOM the motto "The Future is Now." We did this because we believed that networking has come of age and does not represent exotic or futuristic technologies anymore. It is in the mainstream of everyday life and affects directly millions of people around the world. The maturation of our technology is evidenced by the composition of the program. In addition to the traditional areas that represent the basis of networking (such as traffic management, protocols, switching, etc.) we see an increasing presence of new application areas such as wireless networks, active networks, pricing issues, and others. In particular, the problems of pricing (and related economic issues) are very timely and

topical, especially as we gather in New York City which is in a sense the financial capital of the world. To highlight this convergence we featured a keynote address by Professor Pravin Varaiya of the University of California, Berkeley, on questions of service pricing and a preconference tutorial by Paul Stripe of Reuters Information Technology, Inc. again on economic issues that relate to networks.

Our approach this year has been to integrate the tutorials and panel discussions with the technical sessions and to adopt a flat technical program committee structure. Thus, we worked closely with the tutorial and panel chairs in selecting topics and individuals and we conducted the review process by fielding out each paper to a member of the technical program committee, who, then obtained three external reviews from experts of his/her choice. Based on these reviews and on his/her own reading of the paper, the TPC member made a recommendation to accept, reject, or discuss the paper. To provide an additional check and balance we had each paper reviewed by an additional TPC member who made an independent accept, reject, or discuss recommendation. On October 24, 25 of 1998, 41 of the 71 committee members joined us in College Park, MD for a final grueling review of the papers and came up with final recommendations. It was, of course, our responsibility to make the final decisions and we followed the committee's recommendations in all but a handful of cases. We believe that such a rigorous review process is the best guarantee for the maintenance of the highest standard of quality.

There was a great deal of hard work involved in this process but in the end it was an enjoyable experience. It would be a terrible omission if we did not, from this forum, acknowledge the invaluable help (and concurrent intense work) by Professor Henning Schulzrinne of Columbia University who was responsible for developing the elaborate software that enabled us to handle the entire submission and review process electronically. The system he has developed will actually form the basis not only for future INFOCOMs but for many other meetings and conferences across IEEE. We wish you well for next year Henning! The technical program of INFOCOM "2000" is in the able hands of him and of his co-chair, Rafael Rom. Again, our thanks to all who helped us put the program together and our warmest welcome to the participants in the conference and to the readers of these proceedings.

Executive Committee

General Chair

Bharat Doshi, *Bell Labs, Lucent Technologies*

Vice General Co-Chairs:

Guy Omidyar, *Illinois Institute of Technology Research Institute*
Catherine Rosenberg, *Nortel and Imperial College, UK*

Technical Co-Chairs

Anthony Ephremides, *Univ of Maryland*
Satish K. Tripathi, *Univ of California, Riverside*

Publicity Co-Chairs

Malathi Veeraraghavan, *Polytechnic University, Brooklyn*
Irene Katzela, *Univ of Toronto, Canada*

Financial Co-Chairs

Behrokh Samadi, *Bell Labs, Lucent Technologies*
Jennifer Rexford, *AT&T Research*

Tutorial Co-Chairs

George Stamoulis	Alex Tu	Walter Willinger	
David Starobinsky	Saivatore Tucci	Damon Wischik	
Ioannis Stavrakakis	Jon Turner	Ken Wong	
Martha Steenstrup	Hung-Ying Tyan	Wing Wong	
Jenny Steichen	Henry Tzeng	Thomas Woo	
Ralf Steinmetz	Sennur Ulukus	Avishai Wool	
Arnd Steinmetz	Hasan Ural	Suzanne Woolf	
Mark Stemm	Necdet Uzun	Dallas Wrege	
James Stepanek	Huseyin Uzunalioglu	Paul Wright	
Donpaul Stephens	Bharghavan Vaduvur	Rebecca Wright	
James Sterbenz	Nitin Vaidya	Dapeng Wu	
Donpaul Stevens	Faramak Vakil	Gang Wu	
Bart Steyaert	Terri Valenti	Geoffrey Xie	
Dimitrios Stiliadis	Andras Valko	Yijun Xiong	
Paul Stirpe	Bobby Vandalore	Zixiang Xiong	
Ion Stoica	Kobus Vandermerwe	Wei-Ping Xu	
Alexander Stolyar	Felisa Vanquez-Abad	George Xylomenos	
Leo Strawczynski	Kannan Varadhan	Kazuhiko Yamaguchi	
Ling Su	George Varghese	Maria Yang	
William Su	Anujan Varma	Roy Yates	
Chi-Jiun Su	Curtis Varner	Jenny Yates	
Ching-Fong Su	Theodora A. Varvarigou	Zhong Ye	

Table of Contents

Volume 1 Tuesday

Session 1A: Mobile IP and Tracking

Enhancing Survivability of Mobile Internet Access Using Mobile IP with Location Registers	3
<i>R. Jain, T. Raleigh, D. Yang, L. F. Chang, C. Graff, M. Bereschinsky, and M. Patel</i>	
Mobile Internet Telephony: Mobile Extensions to H.323	12
<i>W. Liao</i>	
A New Mobility Model and Its Application in the Channel Holding Time Characterization in PCS Network	20
<i>Y. Fang and I. Chlamtac</i>	
Cell Identification Codes for Tracking Mobile Users	28
<i>Z. Naor and H. Levy</i>	

Session 1B: Traffic Regulation and Specification

Stochastically Bounded Burstiness for Communication Networks	36
<i>D. Starobinski and M. Sidi</i>	
Deterministic Traffic Specification via Projections under the Min-Plus Algebra	43
<i>C.-S. Chang</i>	
Network Traffic Characterization Using Token Bucket Model	51
<i>P. P. Tang and T.-Y. C. Tai</i>	
A Time Varying Filtering Theory for Constrained Traffic Regulation and Dynamic Service Guarantees	63
<i>C.-S. Chang and R. L. Cruz</i>	

Session 1C: Routing and Reconfiguration

Optimization Algorithms for Large Self-Structuring Networks	71
<i>R. Krishnan, R. Ramanathan, and M. Steenstrup</i>	
Hop-by-Hop Routing with Node-Dependent Topology Information	79
<i>V. Fayet, D. A. Khotimsky, and T. Przygienda</i>	
Constructing Optimal IP Routing Tables	88
<i>R. P. Draves, C. King, S. Venkatachary, and B. D. Zill</i>	
SUBMARINE: An Architecture for IP Routing over Large NBMA Networks	98
<i>A. G. Lauck, C. R. Kalmanek, and K. K. Ramakrishnan</i>	

Session 1D: Web Caching

Performance of Web Proxy Caching in Heterogeneous Bandwidth Environments	107
<i>A. Feldmann, R. Cáceres, F. Douglis, G. Glass, and M. Rabinovich</i>	

Cache-Based Compaction: A New Technique for Optimizing Web Transfer 117
M. C. Chan and T. Y. C. Woo

Web Caching and Zipf-like Distributions: Evidence and Implications 126
L. Breslau, P. Cao, L. Fan, G. Phillips, and S. Shenker

Design and Performance of a Web Server Accelerator 135
E. Levy-Abegnoli, A. Iyengar, J. Song, and D. Dias

Session 1E: Modeling, Analysis, and Traffic Control

Dynamic Partitioning: A Mechanism for Shared-Memory Management 144
S. Krishnan, A. K. Choudhury, and F. M. Chiussi

Performance Evaluation and Dimensioning for AAL2 CLAD 153
H. Saito

Automatic Fault Detection and Recovery in Real Time Switched Ethernet Networks 161
S. Varadarajan and T.-C. Chiueh

Approximation Capability of Independent Wavelet Models to Heterogeneous Network Traffic 170
C. Ji, S. Ma, and X. Tian

Session 2A: Ad-Hoc Networks

A Reliable, Efficient Topology Broadcast Protocol for Dynamic Networks 178
B. Bellur and R. G. Ogier

TDMA Scheduling Design of Multihop Packet Radio Networks Based on Latin Squares 187
J.-H. Ju and V. Li

Hop Reservation Multiple Access (HRMA) for Ad-Hoc Networks 194
Z. Tang and J. J. Garcia-Luna-Aceves

CEDAR: a Core-Extraction Distributed Ad Hoc Routing Algorithm 202
P. Sinha, R. Sivakumar, and V. Bharghavan

Session 2B: Performance Measurement and Estimation

An Architecture for a Global Internet Host Distance Estimation Service 210
P. Francis, S. Jamin, V. Paxson, L. Zhang, D. F. Gryniewicz, and Y. Jin

Origins of Internet Routing Instability 218
C. Labovitz, G. R. Malan, and F. Jahanian

Estimation and Removal of Clock Skew from Network Delay Measurements 227
S. B. Moon, P. Skelly, and D. Towsley

Measuring Bandwidth 235
K. Lai and M. Baker

Session 2C: Multicast Resource Allocation

Optimal Partition of QoS Requirements on Unicast Paths and Multicast Trees	246
<i>D. H. Lorenz and A. Orda</i>	
Bandwidth Allocation Policies for Unicast and Multicast Flows	254
<i>A. Legout, J. Nonnenmacher, and E. W. Biersack</i>	
Resource Allocation in a Multicast Tree	262
<i>M. Kodialam and S. H. Low</i>	
Optimal Broadcasting of Two Files over an Asymmetric Channel	267
<i>A. Bar-Noy and Y. Shilo</i>	

Session 2D: High Performance Web Service

Accessing Multiple Mirror Sites in Parallel: Using Tornado Codes to Speed Up Downloads	275
<i>J. W. Byers, M. Luby, and M. Mitzenmacher</i>	
Efficient Algorithms for Predicting Requests to Web Servers	284
<i>E. Cohen, B. Krishnamurthy, and J. Rexford</i>	
A Scalable System for Consistently Caching Dynamic Web Data	294
<i>J. Challenger, A. Iyengar, and P. Dantzig</i>	
Performance Characteristics of Mirror Servers on the Internet	304
<i>A. Myers, P. Dinda, and H. Zhang</i>	

Session 2E: Reconfiguration and Blocking in WDM Networks

Dynamic Reconfiguration Policies for WDM Networks	313
<i>I. Baldine and G. N. Rouskas</i>	
Blocking in Wavelength Routing Networks, Part I: The Single Path Case	321
<i>Y. Zhu, G. N. Rouskas, and H. G. Perros</i>	
Computing Approximate Blocking Probabilities in Wavelength Routed All-Optical Networks with Limited-Range Wavelength Conversion	329
<i>T. Tripathi and K. Sivarajan</i>	
Photonic Rearrangeable Networks with Zero Switching-Element Crosstalk	337
<i>A. Pattavina and G. Maier</i>	

Session 3A: Traffic Measurement and Inference

Measurement and Modeling of the Temporal Dependence in Packet Loss	345
<i>M. Yajnik, S. B. Moon, J. Kurose, and D. Towsley</i>	
Inference of Multicast Routing Trees and Bottleneck Bandwidths Using End-to-end Measurements	353
<i>S. Ratnasamy and S. McCanne</i>	
Classifying Loss Rates in Broadband Networks	361
<i>T. Brown</i>	

Multicast-Based Inference of Network-Internal Characteristics: Accuracy of Packet Loss Estimation	371
<i>R. Caceres, N. G. Duffield, J. Horowitz, D. Towsley, and T. Bu</i>	

Session 3B: Panel - The Value/Future of Quantitative Modeling and Analysis
 Ted Eckberg (Lucent)

Session 3C: Scheduling

Minimizing End-to-End Delay in High-Speed Networks with a Simple Coordinated Schedule	380
<i>M. Andrews and L. Zhang</i>	
Efficient Fair Queueing for ATM Networks Using Uniform Round Robin	389
<i>N. Matsufuru and R. Aibara</i>	
Generalised Minimum Queuing Delay: An Adaptive Multi-Rate Service Discipline for ATM Networks	398
<i>H.-T. Ngan, C.-K. Tham, and W. S. Soh</i>	
Quality of Service Driven Packet Scheduling Disciplines for Real-Time Applications: Looking Beyond Fairness	405
<i>D. Hayes, M. Rumsewicz, and L. L. H. Andrew</i>	

Volume 2 Wednesday

Session 4A: TCP: Wireless and Flow Control

Link Layer Enhancements for TCP/IP over GSM	415
<i>R. Ludwig and B. Rathonyi</i>	
A Model for Window Based Flow Control in Packet-Switched Networks	423
<i>X. Yang</i>	
Using Back-Pressure to Improve TCP Performance with Many Flows	431
<i>C. M. Pazos, J. C. Sanchez-Agrelo, and M. Gerla</i>	
TCP and UDP Performance over a Wireless LAN	439
<i>G. Xylomenos and G. C. Polyzos</i>	

Session 4B: Multimedia Traffic Smoothing

An Effective and Efficient Traffic Smoothing Scheme for Delivery of Online VBR Media Streams	447
<i>R.-I. Chang, M.-C. Chen, J.-M. Ho, and M.-T. Ko</i>	
Optimal Multicast Smoothing of Streaming Video over an Internetwork	455
<i>S. Sen, D. Towsley, Z.-L. Zhang, and J. Dey</i>	
Periodic Broadcasting with VBR-Encoded Video	464
<i>D. Saparilla, K. W. Ross, and M. Reisslein</i>	
Efficient Selective Frame Discard Algorithms for Stored Video Delivery across Resource Constrained Networks	472
<i>Z.-L. Zhang, S. Nelakuditi, R. Aggarwal, and R. P. Tsang</i>
