## Preface

---

Although in this edition *Applied General Statistics* has been largely rewritten, the objective is the same as that of the first edition: to describe the more commonly used statistical methods and to illustrate their applications in many fields.

The scope is essentially the same as that of the earlier edition, but the topic of statistical significance has been expanded, while the book as a whole has been shortened some 115 pages. Nearly all of the illustrative examples are new and, as before, represent real rather than hypothetical data. The order of topics has been altered, the fitting of curves to frequency distributions and the discussion of significance tests having been moved to the end of the book. A few of the symbols have been changed, for simplicity and clarity. Each chapter which uses symbols is preceded by a "symbol vocabulary" for that chapter. The forthcoming fourth edition of *Workbook in Applied General Statistics* will conform to this edition in regard to symbols used and the order of topics.

This second edition of *Applied General Statistics* was prepared by Frederick E. Croxton, except that Dudley J. Cowden provided a first draft of three chapters. The third edition of *Practical Business Statistics* will be prepared by Dudley J. Cowden.

I am indebted to Professor Sir Ronald A. Fisher, Cambridge, to Dr. Frank Yates, Rothamsted, and to Messrs. Oliver and Boyd Ltd., Edinburgh, for permission to reprint portions of Tables III and IV from their book *Statistical Tables for Biological, Agricultural, and Medical Research*. I am similarly indebted to Professor Egon S. Pearson and to the Biometrika Trustees for permission to reprint the tables or portions of tables from *Biometrika* and from E. S. Pearson and H. O. Hartley's *Biometrika Tables for Statisticians*, Volume 1, which are shown here in Appendices I, J, M, O, and P, as well as Charts 25.6 and 25.7. Other persons, and organizations, who supplied data or gave permission to reprint material are acknowledged at the appropriate location.

Many people helped with the work incidental to the revision of this textbook. Dr. James D. Paris prepared the first draft of the two chapters on index numbers, and Robert E. Lewis wrote the initial draft of the

description of the method of adjusting a seasonal index for the date of Easter. Portions of the manuscript were read by Alfred J. Kana, Associate in Statistics, Columbia University. Charles H. Wittmann helped with some phases of the research incidental to the preparation of the manuscript. Julius I. Brown, Roy C. Calogeras (now Lecturer in Statistics, Columbia University), and Donald W. Lovejoy performed computations. Keith Galli, Antony Herrey, Marcia Silfin, Mirian Weissman, and Faedon Xydis assisted in the drawing of charts, many of which were lettered by Marie Morisawa. Most of the manuscript was typed by Miss Hsi-lan Wang. To all of these who helped I express my thanks, but my particular thanks are extended to my wife, Rosetta R. Croxton, who was ready to do whatever was needed whether it was computing, drawing charts, lettering, or working with me on the index.

FREDERICK E. CROXTON

New Jersey

# Contents

---

(For a short course in statistical methods, the chapters or sections which are starred in this table of contents may be omitted without destroying the continuity of treatment.)

CHAPTER	PAGE
<b>1. Introduction . . . . .</b>	<b>1</b>
Statistical Data and Statistical Methods . . . . .	1
Collection . . . . .	2
Presentation . . . . .	3
Analysis . . . . .	3
Interpretation . . . . .	6
A Few Improprieties . . . . .	6
Bias . . . . .	7
Omission of important factor . . . . .	7
Carelessness . . . . .	8
Non-sequitur . . . . .	9
Non-comparable data . . . . .	9
Confusion of association and causation . . . . .	9
Insufficient data . . . . .	10
Unrepresentative data . . . . .	10
Concealed classification . . . . .	11
Failure to define units . . . . .	11
Misleading totals . . . . .	11
Poorly designed experiment . . . . .	12
Research Methods . . . . .	12
<b>2. Statistical Data . . . . .</b>	<b>15</b>
Collecting Statistical Data . . . . .	16
Method of collection . . . . .	16
Outline of procedure . . . . .	16
1. Planning the study . . . . .	17
2. Devising the questions and making the schedule . . . . .	18
3. Selecting the type of sample . . . . .	25
4. Using the schedules to obtain the information . . . . .	34
5. Editing the schedules . . . . .	36
6. Organizing the data . . . . .	37
7. Presentation and analysis . . . . .	45
Using Existing Sources . . . . .	45
Primary versus secondary sources . . . . .	45

CHAPTER		PAGE
<b>2. Statistical Data (<i>Continued</i>)</b>		
Suitability of data .....	46	
Comparability of data from different sources .....	48	
<b>3. Statistical Tables</b> .....	<b>50</b>	
Methods of Presentation .....	50	
Text presentation .....	50	
Tabular presentation .....	51	
Semi-tabular presentation .....	51	
Graphic presentation .....	52	
Leading Considerations .....	53	
Types of tables .....	53	
Comparisons .....	54	
Emphasis .....	56	
Arrangement of items in stub and caption .....	56	
Details of Table Construction .....	60	
Title and identification .....	60	
Prefatory notes and footnotes .....	61	
Source notes .....	61	
Percentages .....	61	
Rounding numbers .....	62	
Totals .....	63	
Units .....	63	
Size and shape of table .....	63	
Ruling .....	64	
Guiding the eye .....	65	
Zeros .....	65	
Size and style of type .....	65	
Statistical Reports .....	65	
<b>4. Graphic Presentation I: Curves Using Arithmetic Scales</b> .....	<b>67</b>	
The Graphic Method .....	67	
Types of Charts .....	68	
Plotting a Curve .....	69	
Types of Data Shown by Curves .....	71	
Time series curves .....	71	
Curves of frequency distributions .....	73	
Rules for Drawing Curves .....	76	
Zero on vertical scale .....	76	
Ruling curves .....	80	
Coordinates .....	81	
Chart proportions .....	81	
Lettering .....	84	
Title .....	85	
Source .....	85	
Line Diagrams for Special Purposes .....	85	
Net balance charts .....	85	
Silhouette charts .....	85	
Maximum variation charts .....	85	
Range charts .....	87	

## CONTENTS

vii

CHAPTER		PAGE
<b>4. Graphic Presentation I: Curves Using Arithmetic Scales (Continued)</b>		
Z-charts.....	87	
Varying horizontal-scale charts.....	89	
Multiple-axis charts.....	90	
Component-part charts.....	90	
<b>5. Graphic Presentation II: The Semi-logarithmic or Ratio Chart.....</b>	<b>93</b>	
Amount of Change vs. Ratio of Change.....	93	
A Grid to Show Ratios of Change.....	98	
The logarithmic scale.....	100	
Interpretation of curves.....	105	
Applications.....	105	
Comparing ratios of increase or decrease.....	105	
Comparing fluctuations.....	108	
Showing ratios.....	109	
Interpolation and extrapolation.....	111	
Construction of Logarithmic Scales.....	113	
<b>6. Graphic Presentation III: Other Types of Charts.....</b>	<b>117</b>	
Bases of Comparison.....	117	
Bar Charts.....	119	
Pictographs.....	123	
Component-Part Charts.....	126	
Statistical Maps.....	130	
Hatched maps.....	131	
Dot maps.....	131	
Pin maps.....	132	
<b>7. Rates, Ratios, and Percentages.....</b>	<b>136</b>	
Calculation.....	137	
Effect of Changing Base.....	138	
Recording Percentages.....	139	
Types of Comparisons.....	140	
Some Frequently Used Ratios.....	141	
Index numbers.....	141	
Sex ratio.....	142	
Population density.....	142	
Ratios per capita.....	142	
Death rates.....	143	
Birth rates.....	144	
Crop yields per acre.....	144	
Hog-corn ratio.....	145	
Batting averages.....	145	
Airline accident ratios.....	146	
The 100 per cent statement.....	147	
Railroad ratios.....	148	
Faulty Use of Percentages.....	149	
Confusion in regard to base.....	149	
Percentages from small numbers.....	150	

CHAPTER		PAGE
<b>7. Rates, Ratios, and Percentages (<i>Continued</i>)</b>		
	Misplaced decimal points.....	150
	Arithmetic mistakes.....	151
	Improper averaging of percentages.....	151
<b>8. The Frequency Distribution</b> .....		<b>153</b>
	Raw Data.....	153
	The Array.....	154
	The Frequency Distribution.....	156
	Selecting the number of classes.....	159
	Selecting class limits.....	160
	Curves of frequency distributions.....	162
	Graphic representation when the class intervals are unequal.....	164
	Graphic comparison of frequency distributions.....	166
	Cumulative frequency distributions and the ogive.....	168
<b>9. Measures of Central Tendency</b> .....		<b>173</b>
	Symbols Used in Chapter 9.....	171
	The Arithmetic Mean.....	173
	The arithmetic mean from ungrouped data.....	173
	Properties of the arithmetic mean.....	174
	The arithmetic mean from grouped data: long method.....	176
	The arithmetic mean from grouped data: short methods.....	179
	The arithmetic mean from grouped data having unequal class intervals.....	181
	Modified forms of the arithmetic mean.....	182
	Averaging percentages.....	183
	Averaging averages.....	184
	The Median.....	185
	The median from ungrouped data.....	185
	The median from grouped data.....	186
	The quartiles, quintiles, deciles, and percentiles.....	187
	The Mode.....	189
	The mode from ungrouped data.....	189
	The mode from grouped data.....	190
	Characteristics of the Mean, Median, and Mode.....	192
	Familiarity of the concept.....	192
	Algebraic treatment.....	193
	Need for classifying data.....	193
	Effect of unequal class intervals.....	194
	Effect of classes with open end.....	194
	Effect of skewness.....	195
	Effect of extreme values.....	195
	Effect of irregularity of data.....	196
	Reliability when based on samples.....	197
	Mathematical properties.....	197
	Selection of appropriate measure.....	197
	Minor Means.....	198
	The geometric mean.....	198
	The harmonic mean.....	203

CHAPTER		PAGE
<b>10. Dispersion, Skewness, and Kurtosis . . . . .</b>		<b>212</b>
Symbols Used in Chapter 10 . . . . .	210	
Measures of Absolute Dispersion . . . . .	213	
The range . . . . .	214	
The 10-90 percentile range . . . . .	214	
The quartile deviation . . . . .	215	
The average deviation . . . . .	215	
The standard deviation, ungrouped data . . . . .	215	
The standard deviation, grouped data . . . . .	217	
Properties of the standard deviation . . . . .	219	
Measures of Relative Dispersion . . . . .	222	
Skewness . . . . .	225	
Pearsonian measure of skewness . . . . .	227	
Measures of skewness based on quartiles and percentiles . . . . .	229	
Measure of skewness based on the third moment . . . . .	229	
Kurtosis . . . . .	232	
Correction of the Moments for Grouping Error . . . . .	237	
<b>11. The Problem of Time Series . . . . .</b>		<b>240</b>
Movements in Time Series . . . . .	240	
Secular trend . . . . .	240	
Periodic movements . . . . .	246	
Cyclical movements . . . . .	249	
Irregular variations . . . . .	251	
Other movements . . . . .	251	
A Graphic Review . . . . .	253	
Preliminary Treatment of Data . . . . .	253	
Calendar variation . . . . .	253	
Population changes . . . . .	256	
Price changes . . . . .	257	
Securing comparability . . . . .	258	
<b>12. Analysis of Time Series: Secular Trend I—The Straight Line . . . . .</b>		<b>261</b>
Symbols Used in Chapter 12 . . . . .	260	
Trend Fitted by Inspection . . . . .	262	
Least-Squares Fit of Straight Line . . . . .	263	
The straight line . . . . .	263	
Method of least squares . . . . .	265	
The normal equations . . . . .	267	
Odd number of years . . . . .	270	
Even number of years . . . . .	273	
Adapting Equations to a Monthly Basis . . . . .	275	
Annual totals— $X$ units, one year . . . . .	276	
Annual totals— $X$ units, one-half year . . . . .	277	
Monthly averages— $X$ units, one year . . . . .	277	
Monthly averages— $X$ units, one-half year . . . . .	277	
Selecting the Period for Trend Analysis . . . . .	278	
Selecting the Type of Trend . . . . .	280	

CHAPTER		PAGE
<b>*13. Analysis of Time Series: Secular Trend II—Non-linear Trends . . . . .</b>		<b>282</b>
Symbols Used in Chapter 13 . . . . .	281	
Simple Polynomials . . . . .	282	
Second-degree curve . . . . .	285	
Third-Degree Curve . . . . .	288	
Orthogonal polynomials . . . . .	289	
Use of Logarithms . . . . .	290	
Straight line fitted to logarithms . . . . .	290	
Second-degree curve fitted to logarithms . . . . .	295	
Asymptotic Growth Curves . . . . .	297	
The modified exponential . . . . .	298	
The Gompertz curve . . . . .	302	
The logistic curve . . . . .	310	
Comparison of the Gompertz and logistic curves . . . . .	316	
Selecting a Trend Type . . . . .	318	
<b>14. Analysis of Time Series: Periodic Movements I—Constant Seasonal Patterns . . . . .</b>		<b>320</b>
An Introductory Illustration . . . . .	320	
Averages of unadjusted data . . . . .	320	
Percentages of simple averages . . . . .	321	
Seasonal Indexes of Monthly Data . . . . .	324	
A seasonal index based on percentages of trend . . . . .	324	
Percentages of centered 12-month moving averages . . . . .	326	
Link relatives . . . . .	339	
Adequacy of the Seasonal Index . . . . .	339	
<b>*15. Analysis of Time Series: Periodic Movements II—Changing Seasonal Patterns . . . . .</b>		<b>340</b>
Progressive Changes in Seasonal Pattern . . . . .	340	
A moving seasonal . . . . .	340	
Computation of a moving seasonal index . . . . .	340	
Sudden Variations in Seasonal Patterns . . . . .	352	
Adjustment for Easter . . . . .	352	
Sudden changes in entire seasonal pattern . . . . .	359	
Short-time shifts in timing . . . . .	359	
Varying amplitude . . . . .	360	
Further Refinements of Method . . . . .	361	
Continuity of seasonal indexes . . . . .	361	
Combinations of seasonal types . . . . .	362	
Logical basis of methods of construction . . . . .	362	
<b>16. Analysis of Time Series: Cyclical Movements—Adjusting Time Series for Trend, Seasonal, and Irregular Movements . . . . .</b>		<b>365</b>
Symbols Used in Chapter 16 . . . . .	364	
Adjusting Annual Data for Trend . . . . .	364	
Adjustment of Monthly Data . . . . .	367	
Deseasonalizing . . . . .	367	

## CONTENTS

xi

CHAPTER		PAGE
<b>16. Analysis of Time Series: Cyclical Movements—Adjusting Time Series for Trend, Seasonal, and Irregular Movements (<i>Continued</i>)</b>		
Adjustment for seasonal and trend.....	373	
Smoothing irregular movements.....	380	
Comparing cyclical movements.....	384	
Other Methods of Estimating Cyclical Movements.....	388	
Direct analysis.....	388	
Harmonic analysis.....	388	
Reference-cycle analysis.....	388	
<b>17. Fundamentals in Index Number Construction.....</b>	<b>394</b>	
Symbols Used in Chapter 17.....	393	
Meaning and Uses of Index Numbers.....	394	
Problems in the Construction of Index Numbers.....	397	
An Illustration of the Behavior of Price Relatives.....	398	
Data for Index Numbers.....	401	
Accuracy.....	402	
Comparability.....	402	
Representativeness.....	402	
Adequacy.....	403	
Selection of Base.....	404	
Aggregative Price Index Numbers.....	405	
Simple aggregates.....	405	
Weighted aggregates.....	406	
Selection of weights.....	408	
Averages of Price Relatives.....	414	
Commodity weights versus group weights.....	417	
Comparison of the four types of price indexes.....	420	
Quantity Index Numbers.....	421	
Aggregative type.....	421	
Averages of relatives.....	423	
<b>18. Index Number Theory and Practice.....</b>	<b>426</b>	
Symbols Used in Chapter 18.....	425	
*Index Number Concepts.....	426	
Mathematical tests.....	426	
Relationship of formula to use.....	428	
The Chain Index.....	431	
*Substituting New Commodities and Changing Weights.....	432	
Descriptions of Indexes.....	436	
Price Indexes.....	436	
The Consumer Price Index.....	436	
United States Bureau of Labor Statistics Index of Wholesale Commodity Prices.....	438	
Indexes of Prices Paid by and Received by Farmers; Parity Ratio.....	439	
Common stock prices.....	441	
Indexes of Physical Volume and of Business Activity.....	442	

CHAPTER		PAGE
<b>18. Index Number Theory and Practice (<i>Continued</i>)</b>		
Federal Reserve Index of Industrial Production .....	442	
The American Telephone and Telegraph Company Index of Industrial Activity.....	444	
The New York Times Weekly Index of Business Activity .....	444	
Indexes of Business Activity in the Pittsburgh District .....	445	
Indexes of Qualitative Changes or Differences.....	446	
Farm housing indexes for Oklahoma .....	446	
Sources of Current Index Numbers.....	448	
<b>19. Correlation I: Two-variable Linear Correlation .....</b>	<b>451</b>	
Symbols Used in Chapter 19.....	449	
A Simple Explanation.....	451	
Correlation Theory.....	454	
The estimating equation.....	455	
Dependability of estimates.....	458	
The correlation coefficient and explained variation.....	461	
The product-moment formula.....	465	
Practical Methods of Computation.....	466	
Some Cautions.....	469	
Correlation and causation.....	469	
Heterogeneity.....	470	
Errors of measurement.....	472	
Use of averages .....	472	
Non-linear relationship.....	473	
Elimination of relevant data.....	473	
Correlation of Grouped Data .....	473	
Effect of grouping.....	477	
Correlation of Ranked Data .....	478	
Correlation of Data in $2 \times 2$ Tables.....	480	
<b>*20. Correlation II: Two-variable Non-linear Correlation .....</b>	<b>486</b>	
Symbols Used in Chapter 20.....	483	
Polynomials.....	486	
Second-degree curve.....	486	
Third-degree curve.....	493	
Use of Transformations .....	503	
Preliminary examination .....	503	
The $\log Y$ , $\log X$ relationship .....	508	
The $\sqrt{Y}$ , $X$ relationship .....	513	
Comparison of the three non-linear relationships for diameter and volume of trees.....	516	
The $\log Y$ , $X$ relationship .....	518	
The $\frac{1}{Y}$ , $X$ relationship .....	519	
The Correlation Ratio, $\eta$ .....	520	
<b>*21. Correlation III: Multiple and Partial Correlation .....</b>	<b>530</b>	
Symbols Used in Chapter 21 .....	525	
Preliminary Explanation .....	530	
Simple correlation .....	530	

CHAPTER		PAGE
<b>*21. Correlation III: Multiple and Partial Correlation (Continued)</b>		
Multiple correlation . . . . .	531	
Partial correlation . . . . .	534	
Computation Procedure . . . . .	536	
Computation of sums . . . . .	536	
Gross measures of relationship . . . . .	538	
Two independent variables: multiple correlation . . . . .	541	
Two independent variables: partial correlation . . . . .	543	
Relationship between $R_{1,23}$ and the measures of gross and partial correlation . . . . .	545	
Three independent variables: multiple correlation . . . . .	546	
Three independent variables: partial correlation . . . . .	549	
Four or more independent variables . . . . .	549	
Multiple-partial coefficients . . . . .	551	
Another Approach to Multiple and Partial Correlation		
Coefficients . . . . .	552	
First-order partial correlation coefficients . . . . .	552	
Second-order partial correlation coefficients . . . . .	554	
Multiple coefficients . . . . .	555	
Coefficients of estimation and standard errors of estimate . . . . .	557	
Other Measures of the Individual Importance of the Independent Variables . . . . .	557	
Beta coefficients . . . . .	557	
Coefficients of separate determination . . . . .	558	
Multiple Curvilinear Correlation . . . . .	559	
Polynomials . . . . .	559	
Transformations . . . . .	559	
Graphic method . . . . .	560	
<b>22. Correlation IV: Correlation of Time Series . . . . .</b>	<b>562</b>	
Symbols Used in Chapter 22 . . . . .	561	
Annual Data . . . . .	562	
Correlation of data unadjusted for trend . . . . .	562	
Correlation of percentages of trend . . . . .	563	
Correlation of unadjusted data with time as a third variable . . . . .	573	
Correlation of amounts of change or percentages of change . . . . .	575	
Problems in correlating time series . . . . .	576	
Monthly Data . . . . .	578	
Synchronous relationships . . . . .	578	
Lag and lead . . . . .	579	
Procedure for use of lead and lag as an aid in forecasting . . . . .	582	
<b>23. Describing a Frequency Distribution by a Fitted Curve . . . . .</b>	<b>588</b>	
Symbols Used in Chapter 23 . . . . .	586	
The Normal Curve . . . . .	590	
Development of the normal curve . . . . .	590	
Explanation of the formula . . . . .	591	
Fitting the Normal Curve . . . . .	594	
Fitting the normal curve to data of physical ability . . . . .	595	

CHAPTER		PAGE
<b>23. Describing a Frequency Distribution by a Fitted Curve (Continued)</b>		<b>PAGE</b>
The normal curve and collar sizes.....	603	
Suitability of the normal curve.....	606	
*Binomials.....	607	
Fitting a binomial.....	609	
*Skewed Curves.....	613	
The logarithmic normal curve.....	613	
Fitting a logarithmic normal curve.....	616	
Fitting a normal curve with adjustment for skewness.....	619	
<b>24. Statistical Significance I: Arithmetic Means.....</b>	<b>626</b>	
Symbols Used in Chapter 24.....	624	
How Sample Arithmetic Means Are Distributed.....	626	
The arithmetic mean of sample means.....	627	
Skewness of sample means.....	627	
Kurtosis of sample means.....	629	
Sample means and the normal curve.....	631	
Dispersion of sample means.....	632	
Significance of the Difference between $\bar{X}$ and $\bar{X}_\phi$ When $\bar{X}_\phi$ and $\sigma$ Are Known.....	635	
A difference between $\bar{X}$ and $\bar{X}_\phi$ that is not significant.....	635	
A difference between $\bar{X}$ and $\bar{X}_\phi$ that is significant.....	637	
The value of $P$ and significance.....	638	
Probability and everyday occurrences.....	641	
Size of sample.....	642	
Significance of the Difference Between $\bar{X}$ and $\bar{X}_\phi$ When $\sigma$ Is Not Known.....	642	
A difference between $\bar{X}$ and $\bar{X}_\phi$ that is not significant.....	643	
A difference between $\bar{X}$ and $\bar{X}_\phi$ that is significant.....	645	
Confidence limits of $\bar{X}_\phi$ .....	648	
Significance of the Difference Between Two Sample Means.....	651	
Independent samples.....	651	
Non-independent samples.....	654	
Conclusion.....	657	
<b>*25. Statistical Significance II: Proportions and the Chi-Square Test.....</b>	<b>661</b>	
Symbols Used in Chapter 25.....	659	
Part I: Proportions.....	661	
Significance of the Difference Between $p$ and $\pi$ .....	661	
Confidence Limits of $\pi$ .....	671	
Significance of the Difference Between $p_1$ and $p_2$ .....	679	
Part 2: The Chi-Square Test.....	681	
The $1 \times 2$ Table.....	681	
The $2 \times 2$ Table.....	684	
$1 \times R$ Tables, Larger Than $1 \times 2$ .....	689	
$2 \times 3$ and Larger Tables.....	691	

CHAPTER		PAGE
<b>*26. Statistical Significance III: Variances, Analysis of Variance, Measures of Skewness and Kurtosis, and Correlation Coefficients</b> .....		<b>699</b>
Symbols Used in Chapter 26.....		694
Variances.....		699
Significance of the difference between $\delta^2$ and $\sigma^2$ .....		700
Confidence limits of $\sigma^2$ .....		701
Significance of the difference between two sample variances		702
Comparison of several values of $\delta^2$ .....		704
Analysis of Variance.....		706
One criterion of classification.....		706
Two criteria of classification, one entry in each box.....		711
Two criteria of classification, more than one entry in a box		714
Measures of Skewness and Kurtosis.....		720
Skewness.....		720
Kurtosis.....		722
Correlation Coefficients.....		722
Simple correlation.....		722
Non-linear correlation.....		726
Multiple correlation.....		732
Partial correlation.....		734

## APPENDICES

<b>A. Flexible Calendar of Working Days.....</b>	<b>738</b>
<b>B. Sums of the First Six Powers of the First 50 Natural Numbers.....</b>	<b>740</b>
<b>C. Sums of the First Six Powers of the First 50 Odd Natural Numbers.....</b>	<b>742</b>
<b>D. Ordinates of the Normal Curve.....</b>	<b>744</b>
<b>E. Areas Under the Normal Curve.....</b>	<b>746</b>
<b>F. Values of <math>F_2\left(\frac{x}{s}\right)</math>.....</b>	<b>747</b>
<b>G. Areas in One Tail of the Normal Curve at Selected Values of <math>\frac{x}{s}</math> or <math>\frac{x}{\sigma}</math> from the Arithmetic Mean.....</b>	<b>748</b>
<b>H. Areas in Two Tails of the Normal Curve at Selected Values of <math>\frac{x}{s}</math> or <math>\frac{x}{\sigma}</math> from the Arithmetic Mean.....</b>	<b>749</b>
<b>I. Values of <math>t</math>.....</b>	<b>750</b>
<b>J. Values of <math>\chi^2</math>.....</b>	<b>752</b>
<b>K. Values of <math>\frac{\delta^2}{\sigma^2}</math> for Use in Determining Sampling Limits of <math>\delta^2</math> 754</b>	
<b>L. Values of <math>\frac{\sigma^2}{\delta^2}</math> for Use in Determining Confidence Limits of <math>\sigma^2</math> 756</b>	
<b>M. Values of <math>F</math>.....</b>	<b>758</b>

APPENDIX		PAGE
<b>N. Values of <math>L</math> at the 0.05 and 0.01 Points for Specified Values of <math>N_i</math> and <math>k</math>, when <math>N_1 = N_2 = \dots = N_k = N_i</math> . . . . .</b>		<b>763</b>
<b>O. Upper 0.10 and 0.02 Limits of <math>\beta_1</math> When Computed from Random Samples from a Normal Population . . . . .</b>		<b>764</b>
<b>P. Upper and Lower 0.05 and 0.01 Limits of <math>\beta_2</math> When Computed from Random Samples from a Normal Population . . . . .</b>		<b>765</b>
<b>Q. Squares, Square Roots, and Reciprocals, 1-1,000 . . . . .</b>		<b>766</b>
<b>R. Common Logarithms of Numbers . . . . .</b>		<b>776</b>
<b>S. Demonstrations . . . . .</b>		<b>792</b>
<b>T. Rounding Numbers . . . . .</b>		<b>818</b>
<b>U. Selected List of Readily Available Sources of Data . . . . .</b>		<b>823</b>
A. General . . . . .		823
B. Commodities—Prices, Production, Consumption, Stocks, Exports, and Imports . . . . .		824
C. Financial—Money, Banking, Securities, Interest Rates, Taxation, Etc . . . . .		826
D. Employment, Wages, and Hours of Labor . . . . .		826
E. Activities of Individual Concerns . . . . .		827
F. Miscellaneous . . . . .		828
<b>Index . . . . .</b>		<b>831</b>
