Preface

In many situations found both in Nature and in human-built systems, a set of mixed signals is observed (frequently also with noise), and it is of great scientific and technological relevance to be able to isolate or separate them so that the information in each of the signals can be utilized.

Blind source separation (BSS) research is one of the more interesting emerging fields nowadays in the field of signal processing. It deals with the algorithms that allow the recovery of the original sources from a set of mixtures only. The adjective “blind” is applied because the purpose is to estimate the original sources without any a priori knowledge about either the sources or the mixing system. Most of the models employed in BSS assume the hypothesis about the independence of the original sources. Under this hypothesis, a BSS problem can be considered as a particular case of independent component analysis (ICA), a linear transformation technique that, starting from a multivariate representation of the data, minimizes the statistical dependence between the components of the representation. It can be claimed that most of the advances in ICA have been motivated by the search for solutions to the BSS problem and, the other way around, advances in ICA have been immediately applied to BSS.

ICA and BSS algorithms start from a mixture model, whose parameters are estimated from the observed mixtures. Separation is achieved by applying the inverse mixture model to the observed signals (separating or unmixing model). Mixture models usually fall into three broad categories: instantaneous linear models, convolutive models and nonlinear models, the first one being the simplest but, in general, not near realistic applications. The development and test of the algorithms can be accomplished through synthetic data or with real-world data. Obviously, the most important aim (and most difficult) is the separation of real-world mixtures. BSS and ICA have strong relations also, apart from signal processing, with other fields such as statistics and artificial neural networks.

As long as we can find a system that emits signals propagated through a mean, and those signals are received by a set of sensors and there is an interest in recovering the original sources, we have a potential field of application for BSS and ICA. Inside that wide range of applications we can find, for instance: noise reduction applications, biomedical applications, audio systems, telecommunications, and many others.

This volume comes out just 20 years after the first contributions in ICA and BSS appeared¹. Thereinafter, the number of research groups working in ICA and BSS has been constantly growing, so that nowadays we can estimate that far more than 100 groups are researching in these fields.

As proof of the recognition among the scientific community of ICA and BSS developments there have been numerous special sessions and special issues in several well-

¹ J. Herault, B. Ans, “Circuits neuronaux à synapses modifiables: décodage de messages composites para apprentissage non supervisé”, *C.R. de l'Académie des Sciences*, vol. 299, no. III-13, pp. 525–528, 1984.

Independently, two years before, although without the scientific impact of the previous reference, the following contribution was published:

J.W. Barnes, Y. Carlin, and M.L. Steinberger, “Bootstrapping adaptive interference cancelers: some practical limitations”, *Proc. of the Globecom Conference*, pp. 1251–1255, 1982.

known conferences and journals, such as GRETSI, NOLTA, ISCAS, EUSIPCO, NIPS, ESANN, IWANN, etc. An important landmark in the development of ICA was the organization of the first conference dedicated to ICA and BSS: the 1st International Workshop on Blind Source Separation and Independent Component Analysis (ICA 1999), which occurred in Aussois (France) in 1999. This workshop has been taking place since then about every 18 months, in Helsinki, Finland (ICA 2000), San Diego, California, USA (ICA 2001), and Nara, Japan (ICA 2003).

This volume of Lecture Notes in Computer Science encompasses the contributions to ICA 2004 which was held in Granada (Spain), presenting new ideas and challenges for ICA and BSS. This volume is composed of 156 contributions, selected after a peer-review process from 203 original contributions. The manuscripts were organized into the following eight sections:

1. Theory and fundamentals
2. Linear models
3. Convolutional models
4. Nonlinear models
5. Speech processing applications
6. Image processing applications
7. Biomedical applications
8. Other applications

We would like to thank all members of the International Advisory and Program Committees, who evaluated many contributions in a short time schedule. Other volunteers participated in the reviewing process, to whom we express our gratitude.

We are also very grateful to the University of Granada, the MEC (*Ministerio de Educación y Cultura*), *Consejería de Universidades* of the Andalusian Regional Government, and the Spanish CICYT (*Comisión Interministerial de Ciencia y Tecnología*) for their generous help.

The editors would like to thank Springer-Verlag, in particular Mr. Alfred Hofmann, for their collaboration and attention.

Finally, many thanks to all the authors who submitted their contributions and who made this volume possible.

Estimating Functions for Blind Separation when Sources Have Variance-Dependencies	136
<i>Motoaki Kawanabe and Klaus-Robert Müller</i>	
Framework of Constrained Matrix Gradient Flows	144
<i>Gen Hori</i>	
Identifiability, Subspace Selection and Noisy ICA	152
<i>Mike Davies</i>	
Improving GRNNs in CAD Systems	160
<i>Fulgencio S. Buendía Buendía, J. Miguel Barrón-Adame, Antonio Vega-Corona, and Diego Andina</i>	
Fisher Information in Source Separation Problems	168
<i>Vincent Vigneron and Christian Jutten</i>	
Localization of P300 Sources in Schizophrenia Patients Using Constrained BSS . .	177
<i>Saeid Sanei, Loukianos Spyrou, Wenwu Wang, and Jonathon A. Chambers</i>	
On the Estimation of the Mixing Matrix for Underdetermined Blind Source Separation in an Arbitrary Number of Dimensions	185
<i>Luis Vielva, Ignacio Santamaría, Jesús Ibáñez, Deniz Erdogmus, and José Carlos Príncipe</i>	
On the Minimum ℓ_1 -Norm Signal Recovery in Underdetermined Source Separation	193
<i>Ichigaku Takigawa, Mineichi Kudo, Atsuyoshi Nakamura, and Jun Toyama</i>	
On the Strong Uniqueness of Highly Sparse Representations from Redundant Dictionaries	201
<i>Rémi Gribonval and Morten Nielsen</i>	

Reliability of ICA Estimates with Mutual Information	209
<i>Harald Stögbauer, Ralph G. Andrzejak, Alexander Kraskov, and Peter Grassberger</i>	
Robust ICA for Super-Gaussian Sources	217
<i>Frank C. Meinecke, Stefan Harmeling, and Klaus-Robert Müller</i>	
Robustness of Prewhitening Against Heavy-Tailed Sources	225
<i>Aiyoun Chen and Peter J. Bickel</i>	
Simultaneous Extraction of Signal Using Algorithms Based on the Nonstationarity	233
<i>Juan Charneco Fernández</i>	
Space-Time Variant Blind Source Separation with Additive Noise	240
<i>Ivica Kopriva and Harold Szu</i>	
The Use of ICA in Speckle Noise	248
<i>D. Blanco, B. Mulgrew, S. McLaughlin, D.P. Ruiz, and M.C. Carrion</i>	
Theoretical Method for Solving BSS-ICA Using SVM	256
<i>Carlos G. Puntonet, Juan Manuel Górriz, Moisés Salmerón, and Susana Hornillo-Mellado</i>	
Wavelet De-noising for Blind Source Separation in Noisy Mixtures	263
<i>Bertrand Rivet, Vincent Vigneron, Anisoara Paraschiv-Ionescu, and Christian Jutten</i>	

Linear Mixture Models

A Gaussian Mixture Based Maximization of Mutual Information for Supervised Feature Extraction	271
<i>José M. Leiva-Murillo and Antonio Artés-Rodríguez</i>	
Blind Separation of Nonstationary Sources by Spectral Decorrelation	279
<i>Shahram Hosseini and Yannick Deville</i>	
Delayed AMUSE – A Tool for Blind Source Separation and Denoising	287
<i>Ana R. Teixeira, Ana Maria Tomé, Elmar W. Lang, and Kurt Stadthanner</i>	
Dimensionality Reduction in ICA and Rank- $(R_1, R_2, \dots, R_N)$ Reduction in Multilinear Algebra	295
<i>Lieven De Lathauwer and Joos Vandewalle</i>	
Linear Multilayer Independent Component Analysis Using Stochastic Gradient Algorithm	303
<i>Yoshitatsu Matsuda and Kazunori Yamaguchi</i>	

Minimax Mutual Information Approach for ICA of Complex-Valued Linear Mixtures	311
<i>Jian-Wu Xu, Deniz Erdogmus, Yadunandana N. Rao, and José Carlos Príncipe</i>	
Signal Reconstruction in Sensor Arrays Using Temporal-Spatial Sparsity Regularization	319
<i>Dmitri Model and Michael Zibulevsky</i>	
Underdetermined Source Separation with Structured Source Priors	327
<i>Emmanuel Vincent and Xavier Rodet</i>	
A Grassmann-Rayleigh Quotient Iteration for Dimensionality Reduction in ICA ..	335
<i>Lieven De Lathauwer, Luc Hoegaerts, and Joos Vandewalle</i>	
An Approach of Moment-Based Algorithm for Noisy ICA Models	343
<i>Daisuke Ito and Noboru Murata</i>	
Geometrical ICA-Based Method for Blind Separation of Super-Gaussian Signals	350
<i>Manuel Rodríguez-Álvarez, Fernando Rojas Ruiz, Rubén Martín-Clemente, Ignacio Rojas Ruiz, and Carlos G. Puntonet</i>	
A Novel Method to Recover N Sources from N-1 Observations and Its Application to Digital Communications	358
<i>Adriana Dapena</i>	
A Sufficient Condition for Separation of Deterministic Signals Based on Spatial Time-Frequency Representations	366
<i>Nadège Thirion-Moreau, El Mostafa Fadaili, and Eric Moreau</i>	
Adaptive Robust Super-exponential Algorithms for Deflationary Blind Equalization of Instantaneous Mixtures	374
<i>Masanori Ito, Masashi Ohata, Mitsuru Kawamoto, Toshiharu Mukai, Yujiro Inouye, and Noboru Ohnishi</i>	
Application of Gaussian Mixture Models for Blind Separation of Independent Sources	382
<i>Koby Todros and Joseph Tabrikian</i>	
Asymptotically Optimal Blind Separation of Parametric Gaussian Sources	390
<i>Eran Doron and Arie Yeredor</i>	
Bayesian Approach for Blind Separation of Underdetermined Mixtures of Sparse Sources	398
<i>Cédric Févotte, Simon J. Godsill, and Patrick J. Wolfe</i>	
Blind Source Separation Using the Block-Coordinate Relative Newton Method	406
<i>Alexander M. Bronstein, Michael M. Bronstein, and Michael Zibulevsky</i>	

Hybridizing Genetic Algorithms with ICA in Higher Dimension	414
<i>Juan Manuel Górriz, Carlos G. Puntonet, Moisés Salmerón, and Fernando Rojas Ruiz</i>	
ICA Using Kernel Entropy Estimation with NlogN Complexity	422
<i>Sarit Shwartz, Michael Zibulevsky, and Yoav Y. Schechner</i>	
Soft-LOST: EM on a Mixture of Oriented Lines	430
<i>Paul D. O'Grady and Barak A. Pearlmutter</i>	
Some Gradient Based Joint Diagonalization Methods for ICA	437
<i>Bijan Afsari and Perinkulam S. Krishnaprasad</i>	
Underdetermined Independent Component Analysis by Data Generation	445
<i>Sang Gyun Kim and Chang D. Yoo</i>	

Convulsive Models

Batch Mutually Referenced Separation Algorithm for MIMO Convulsive Mixtures	453
<i>Ali Mansour</i>	
Frequency Domain Blind Source Separation for Many Speech Signals	461
<i>Ryo Mukai, Hiroshi Sawada, Shoko Araki, and Shoji Makino</i>	
ICA Model Applied to Multichannel Non-destructive Evaluation by Impact-Echo	470
<i>Addisson Salazar, Luis Vergara, Jorge Igual, Jorge Gosálbez, and Ramón Miralles</i>	
Monaural Source Separation Using Spectral Cues	478
<i>Barak A. Pearlmutter and Anthony M. Zador</i>	
Multichannel Speech Separation Using Adaptive Parameterization of Source PDFs	486
<i>Kostas Kokkinakis and Asoke K. Nandi</i>	
Non-negative Matrix Factor Deconvolution; Extraction of Multiple Sound Sources from Monophonic Inputs	494
<i>Paris Smaragdís</i>	
Optimal Sparse Representations for Blind Deconvolution of Images	500
<i>Alexander M. Bronstein, Michael M. Bronstein, Michael Zibulevsky, and Yehoshua Y. Zeevi</i>	
Separation of Convulsive Mixtures of Cyclostationary Sources: A Contrast Function Based Approach	508
<i>Pierre Jallon, Antoine Chevreuil, Philippe Loubaton, and Pascal Chevalier</i>	

A Continuous Time Balanced Parametrization Approach to Multichannel Blind Deconvolution	516
<i>Liang Suo Ma and Ah Chung Tsoi</i>	
A Frequency-Domain Normalized Multichannel Blind Deconvolution Algorithm for Acoustical Signals	524
<i>Seung H. Nam and Seungkwon Beack</i>	
A Novel Hybrid Approach to the Permutation Problem of Frequency Domain Blind Source Separation	532
<i>Wenwu Wang, Jonathon A. Chambers, and Saeid Sanei</i>	
Application of Geometric Dependency Analysis to the Separation of Convolved Mixtures	540
<i>Samer Abdallah and Mark D. Plumbley</i>	
Blind Deconvolution of SISO Systems with Binary Source Based on Recursive Channel Shortening	548
<i>Konstantinos I. Diamantaras and Theophilos Papadimitriou</i>	
Blind Deconvolution Using the Relative Newton Method	554
<i>Alexander M. Bronstein, Michael M. Bronstein, and Michael Zibulevsky</i>	
Blind Equalization Using Direct Channel Estimation	562
<i>Hyung-Min Park, Sang-Hoon Oh, and Soo-Young Lee</i>	
Blind MIMO Identification Using the Second Characteristic Function	570
<i>Eran Eidingen and Arie Yeredor</i>	
Blind Signal Separation of Convolutional Mixtures: A Time-Domain Joint-Diagonalization Approach	578
<i>Marcel Joho</i>	
Characterization of the Sources in Convolutional Mixtures: A Cumulant-Based Approach	586
<i>Susana Hornillo-Mellado, Carlos G. Puntonet, Rubén Martín-Clemente, Manuel Rodríguez-Álvarez, and Juan Manuel Górriz</i>	
CICAAR: Convolutional ICA with an Auto-regressive Inverse Model	594
<i>Mads Dyrholm and Lars Kai Hansen</i>	
Detection by SNR Maximization: Application to the Blind Source Separation Problem	602
<i>Bernard Xerri and Bruno Borloz</i>	
Estimating the Number of Sources for Frequency-Domain Blind Source Separation	610
<i>Hiroshi Sawada, Stefan Winter, Ryo Mukai, Shoko Araki, and Shoji Makino</i>
