序

苹果作为世界四大水果之一，地域分布极为广泛。我国作为苹果的发源地之一，具有极为丰富的苹果种质资源。随着苹果产业的不断发展，我国现已拥有渤海湾、黄土高原、黄河故道和西南冷凉高地四大苹果产区，种植品种涉及早、中、晚熟鲜食品种及加工品种。

近10年，苹果产业进入快速发展期，2005年统计苹果栽培面积189万hm²，产量2 401.1万t，2013年苹果栽培面积上升到227.2万hm²，产量上升到3 968.3万t。苹果产业已成为涉及一、二、三产业的综合产业，对生态环境、农民增收、企业增效等均有贡献。

世界苹果育种的历史已经百年有余，一个世纪以来，育种工作者对苹果新品种的选育和发展贡献良多。纵观全球苹果品种发展格局，国外栽植最为广泛的苹果品种除金冠、元帅、旭等传统品种外，人工选育的富士、嘎拉、乔纳金、粉红女士等品种近年也有较快发展。受苹果消费市场多元化需求的影响，国内外苹果优新品种不断涌现，自20世纪80年代富士苹果引进之后，我国还陆续引进了乔纳金、嘎拉等许多新品种进行栽培。近年来，我国的苹果新品种选育也有一定突破，育成的寒富、秦阳、华硕等多个新品种在各大苹果产区均有不俗的表现。

为了让国内外同行对中国现有的栽培苹果品种有所了解，国家苹果产业技术体系7位岗位专家历时3年，筛选现有栽培品种，组织团队成员对选定的144个品种进行统一标准拍摄，并组织编写《中国苹果品种》。该书文字简洁，内容丰富，且每个品种均附有中英文介绍，方便国内外同行查阅，为国内外从事苹果科研及生产相关人员提供了一本很好的参考书。

PREFACE

Apple (*Malus domestica*) is one of the top four most important fruit trees in the world and is widely cultivated in a variety of geological distribution. China is one of the most important places in which apple was originated and has abundant apple germplasm resources. As the continuous development of apple industry, China has had four main regions of apple production, that is, the Bohai Bay region, the Loess Plateau region in the northwest, the Old Yellow River region, and cold highland region in the Southwest. The varieties cultivated not only include early, mid and late-ripening fresh eating apples but processing apples as well.

Apple industry in China has entered a rapid developmental period in recent 10 years. The apple cultivation area was increased from 1.89 million hectares in 2005 to 2.27 million hectares in 2013, and the total production was increased from 24.011 million tons in 2005 to 39.683 million tons in 2013. Apple industry has become a comprehensive industry including primary, secondary and tertiary industries has contributed a lot to the ecological environment, farmer income and enterprise income.

Apple breeding in the world commenced a century ago. Apple breeders have contributed a lot to the apple industry for breeding and extending new varieties in the world. At present, the most widely cultivated apple varieties in the world include not only the conventional varieties such as Golden Delicious, Delicious and McIntosh, but artificially bred varieties such as Fuji, Gala, Jonagold and Pink Lady as well. The trend of apple breeding is mainly determined by the demands of consumers and markets. Fuji apple was introduced into China in the early 1980s. Many other varieties such as Jonagold and Gala were introduced into China afterwards. Apple breeders in China have made a profound progress in breeding new apple varieties in recent years, such as Hanfu, Qinyang, Huashuo evidently performing well in different regions of apple production.

For the introducing the currently cultivated apple varieties in China to the apple breeders and growers in the world, seven apple breeders and their team members of CARS have taken three years to edit the book of Chinese Apple Varieties, in which 144 varieties were described with beautiful pictures and clarified writings, and as well as double languages. I believe that this book should be a nice reference both for the professionals and the amateurs.

June, 2015

前 言

苹果是世界上栽培最为普遍的落叶果树之一，最初主要分布于欧洲、亚洲和北美洲，经过2 000多年的驯化和品种选育，现在五大洲都有苹果栽培。中国是苹果属植物的发源地之一，经过长期的自然选择和人工选育，现已拥有极为丰富的苹果种质资源。

近年来，随着我国对苹果产业发展的重视，苹果栽培面积趋于稳定，产量稳步增长，栽培区域逐步集中，品种结构有所改善，产业化水平不断提高。从分布来看，我国苹果生产主要集中在环渤海湾、西北黄土高原、黄河故道和西南冷凉高地四大产区。据农业部统计，2013年我国苹果栽培面积和产量分别达到227.2万hm²和3 968.3万t，居世界首位。近年来，我国苹果新品种选育成绩斐然，相继育成了以秦阳、华硕、寒富等为代表的300余个新品种，在我国苹果品种的更新换代和结构调整中起到了重要作用。目前，虽然红富士占据了苹果种植的主要地位，从国外引进的一些新品种，如乔纳金、嘎拉系、藤牧1号、美八等也有一定的发展。

为促进我国苹果产业的发展，让国内外从事苹果育种研究的同行对我国目前的栽培苹果品种有所了解，国家苹果产业技术体系育种与资源利用研究室各专家历时3年，采用一致的拍摄标准，对144个苹果品种进行了拍摄，并组织编写了《中国苹果品种》。每个品种分别记述了来源或选育单位、主要形态特征和生物学特性以及品质特性。本书比较全面地反映了中国目前的苹果栽培品种类型以及近年来的选育成就，可以为国内外苹果科研、育种及生产方面相关人员提供一定的参考。

本书编写过程中，得到了国家苹果产业技术体系各位同行的诸多支持，在此一并致谢。由于编者业务水平和经验有限，收集的资料不够全面，书稿整理过程中难免存在疏漏，敬请读者批评指正。

FOREWORD

Apple is one of the most popular deciduous fruit trees cultured in the world. It is originally distributed in Europe, Asia and North America. With more than 2 000 years of natural domestication and breeding improvement, apple has been widely grown in five continents of the world. China is one of the origin places for *Malus* species and has abundant apple germplasm resources through long-term natural selection and artificial breeding.

In recent years, great attention has been paid to the development of apple industry in China. Apple growing areas tend to be stable and growing regions are gradually concentrated. Total annual production is increased steadily, variety compositions are continuously optimized, and the level of industrialization is continuously increased as well. Apple production in China is mainly distributed in four regions, that is, Bohai Gulf Area, Northwest Loess Plateau, Ancient Cannel Region of Yellow River and Southwest Cold Highland. According to the statistics of China Ministry of Agriculture, the apple production area reached 2.272 million hectares, with a total annual production of 39.683 million tons in 2013, therefore, China is the top country of apple production in the world. Great achievements have been made in apple breeding in China and more than 300 new varieties and strains have been selected such as Qinyang, Huashuo and Hanfu, in last several decades, playing an important role in upgrading apple varieties. Although Fuji is still the dominating variety in China at present, some new varieties introduced from abroad also has got a certain development, such as Jonagold, Gala, MATO, Meiba and so on.

In order to promote the development of apple industry and give a chance to the worldwide apple breeders to know apple varieties cultivated in China, Chinese apple breeders from Breeding and Resource Division of China Apple Industrial Technology System have taken three years to edit and publish the book Apple Varieties in China, in which 144 apple varieties have been described with photos, origin, breeding organization, main morphological characters, biological characteristics and quality traits of each variety using unified standard. This book in fact is a brief introduction of the current apple varieties and breeding achievements in China. It of course could be a good reference for the people working in apple industry at home and abroad.

We are very grateful for receiving a lot of support and assistance from the colleagues of China Apple Industrial Technology System during the course of compiling the book. Criticisms and rectifications from the readers are much appreciated for the shortcomings of the book due to our limited experience.

第一部分

中国苹果概况

**Part I General Situation of
Apple Industry in China**

一、中国苹果栽培历史悠久

A Long History of Apple Cultivation in China

中国是世界上苹果栽培历史最悠久的国家之一，苹果在中国至少有2 200多年的栽培历史。中国的栽培苹果被命名为*Malus × pumila* Mill.，可分为两大类：中国苹果和西洋苹果。中国苹果古称“柰”，起源于中国新疆西部；汉武帝时代的《上林赋》（公元前126—前118年）已有关于“柰”的记载。稍后，《西京杂记》也提到“柰三：白柰、紫柰、绿柰”。西洋苹果是指目前各国所栽培的苹果，品种大多出自欧美，1871年开始传入中国。无论是中国苹果还是西洋苹果都存在一个漫长的演变过程，都是经过久远的自然选择和人工选择的结果。

China is one of the countries with the longest history of apple cultivation in the world; China has a more than 2 200-year long history of apple production. The cultivated apple of China was named *Malus × pumila* Mill., including *Malus domestica* subsp. *chinensis* Li Y. N. and *Malus domestica* Borkh. The *M. domestica* subsp. *chinensis* Li Y. N. was named ‘Nai’ in ancient China, and originated in western Xinjiang. It was recorded in *Shang Lin Fu* in the Western Han Dynasty era (from 126 B.C. to 118 B.C.). The article *Xi jing za ji* also recorded three kinds of ‘Nai’ including white, purple, and green ones. The *M. domestica* Borkh mainly refers to the major apple cultivars of most countries, and the varieties are mostly from Europe and the United States, in 1871 began to spread to China. Both *M. domestica* subsp. *chinensis* Li Y. N. and *M. domestica* Borkh existed a long evolution process, were all the results of a long natural selection and artificial selection.

二、中国苹果种质资源丰富

China Is Rich in Apple Germplasm

中国是世界苹果属植物的大基因中心。世界上苹果属野生种为27种，原产我国的苹果野生种有16种，为世界的59%。我国的云南、贵州及四川三省密集分布15种苹果野生种，包括台湾林檎、尖嘴林檎及滇池海棠等古老的野生种，形成了苹果属植物遗传多样性中心。另一个多样性中心则是新疆天山山脉，此处形成了新疆野苹果大的自然群落。中国不仅苹果野生种质资源丰富，而且苹果栽培历史悠久，拥有遗传多样极为丰富的苹果种质资源。《中国果树志·苹果卷》描述了苹果野生及砧木资源66份，中国原产品种176份，国内选育品种162份，国外引进品种322份。目前，位于辽宁、吉林、云南及新疆的国家果树种质圃保存苹果资源1 750余份（含部分重复），包括野生类型、农家品种、选育品种、遗传材料及国外引进品种。

China is one of the largest gene centers for *Malus* Mill. in the world. There are 27 wild species of *Malus* Mill. in the world, and 59 percent of them which contains 16 wild species originated from China. 15 wild species including some old wild species such as *M. doumeri*, *M. melliana* and *M. yunnanensis* distribute in Yunnan, Guizhou and Sichuan of China. Another diversity center is located in Tian Shan Mountain of Xinjiang where natural communities of *M. sieverii* formed. China is not only rich in wild species of *Malus* Mill., but

also has long history of apple cultivation and apple germplasm resources with abundant genetic diversity. 66 wild and rootstock resources, 176 original cultivars of China, 162 domestic bred cultivars and 322 overseas introduced cultivars are described in the book *Chinese Fruit Apple*. At present more than 1 750 apple germplasm resources including some duplicates are preserved in the National Repository of Apple Germplasm Resources of Liaoning, Jilin, Yunnan and Xinjiang, which contains wild types, landraces, bred cultivars, genetic accessions and overseas introduced cultivars.

新疆野苹果林 [*M. sieverii* (Led.) Roem of Xinjiang]

内蒙古山定子 [*M. baccata* (L.) Borkh. of Inner Mongolia]

河北八棱海棠 [*M. robusta* (Carr.) Rehd. of Hebei Province]

甘肃垂丝海棠 (*M. halliana* Koehne of Gansu Province)

三、中国是苹果生产大国

China Is the Largest Apple Producing Country

中国是世界上最大的苹果生产国，面积和产量均居世界首位。近年来，中国苹果总产量均稳定在全球苹果总产量的一半左右。据农业部统计，2013年我国苹果种植面积为227.22万hm²，仅次于柑橘，占我国果园总面积的18.37%，居第二位；总产量为3 968.26万t，占全国水果总产量的25.16%，居全国首位（表1）。苹果在农业产业结构调整、增加农民收入、促进地方经济快速发展等方面发挥着越来越重要的作用。

China is the largest apple producer in the world, the area and output are all the first in the world. In recent years, the apple's total output is stable in the world, about half of the total apple production. According to the Ministry of Agriculture statistics, in 2013, the total cultivated area of apple in China was 2 272 200 hectares, which second only to the cultivation area of citrus, accounting for 18.37% of the total fruit area of China. The total production of apple in China was 39.6826 million tons, accounting for 25.16% of the total fruit production of China (Table 1).

Apple plays very important roles in many fields, including the structure adjustment of agricultural industry, increasing income, and promoting the rapid development of local economy and so on.

表1 我国主要水果栽培面积和产量 (2013)
Table 1 Main fruit cultivated area and production in China (2013)

水果品种 Fruits	栽培面积 (万hm ²) Area (Ten thousands hectare)	占总面积比例(%) Percentage	产量 (万t) Production (Ten thousands ton)	占总产量比例(%) Percentage

数据来源：中国农业部。

四、中国苹果栽培区域与品种结构

Planting Distribution and Layout of Apples in China

(一) 分布区域广泛 Extensive Distribution

我国有适宜于苹果树生长发育理想的地理、土壤和气候条件，苹果分布区域较为广泛，包括渤海湾产区（辽宁、山东、河北等省份）、黄土高原产区（山西、甘肃、陕西、河南等省份）、黄河故道（豫东、鲁西南、苏北和皖北）和秦岭北麓产区（渭河两岸、豫西、湖北西北部），以及西南冷凉高地

产区（四川、云南、贵州等省份）、东北寒地小苹果产区、新疆苹果产区。其中，渤海湾产区、黄土高原产区、黄河故道和秦岭北麓产区、西南冷凉高地产区为2008年农业部规划的四大苹果优势主产区。

近年来，中国苹果生产的区域布局发生了较为明显的变化，四大主产区逐步调整为渤海湾和黄土高原两大优势主产区格局，在区域内部也呈现出“西移”和“北扩”趋势。

In China, we have ideal geographical soil and climate conditions, which is suitable for the apple tree growth and development. The distribution area of apple is widely, including Bohai Bay region (Liaoning, Shandong, Hebei, etc), the Loess Plateau region (Shanxi, Gansu, Shaanxi, Henan, etc), the Yellow River communist-held (east of Henan, southwest of Shandong, north of Jiangsu and north of Anhui) and North Qinling region, Southwest cold highland districts (Sichuan, Yunnan, Guizhou, etc), the Northeast cold little apple production region, and Xinjiang apple production region. Among them, the Bohai Bay region, Loess Plateau region, Yellow River communist-held and North Qinling region, and Southwest cold highland districts, were planned as four major advantages regions of producing apples by the Ministry of Agriculture in 2008.

In recent years, the apple production regions layout taken placed obvious changes, the four major advantages regions gradual adjustment for two major producing regions pattern, including Bohai Bay and the Loess Plateau, and within the region also presents “devastated” and “north expansion” trend.

（二）中国苹果品种结构 Variety Structure of China Apple

由于诸多原因，具有悠久栽培历史的原产中国苹果品种现存较少。目前中国苹果生产上主栽品种多为国外引进，红富士占据了苹果种植的主要地位，从国外引进的一些品种，如藤牧1号、美八、乔纳金、嘎拉系等品种也有一定的发展。近年来，我国的苹果新品种选育也有一定突破，育成的寒富、秦阳、华硕等多个新品种在各大苹果产区均有不俗的表现。中国苹果主栽品种与砧木见表2。

Due to many reasons, the existing apple varieties originated from China which has long cultivation history is less. At present, most of cultivation varieties in China are imported, the Fuji occupied the main position of apple planting, some other introduced varieties also had a certain development, including MATO, Meiba, Jonagold and Galas as well. Recently, the apple varieties breeding also have some breakthrough in China, multiple new varieties had good performance in some big apple production areas, such as Hanfu, Qinyang, and Huashuo as well.
